1895. The fleet of Admiral Ting surrenders to the Japanese on February 12 at Weihaiwei. Niuchwang is taken by the Japanese on March 5, and two days later Li Hung Chang **sues for peace,** which is concluded in May. On October 8 Queen Min of Korea is assassinated at Seoul at the alleged instigation of the Japanese envoy.

On October 31 Japan receives a payment of $40,000,000, from China, the first installment of the indemnity stipulated by the treaty of peace.

1896. The Japanese envoy Miura and forty other Japanese are acquitted of complicity in the murder of Queen Min of Korea.

1897. On October 1, Japan adopts the gold standard.

1898. In January the Marquis Ito, assisted by the personal intervention of the Mikado, forms a cabinet independent of party lines. In June, this ministry resigns.

1899. July 17, treaties recognizing Japan as one of the "family of nations" go into effect. Courts are reorganized and legal codes revised on the German model.

1901. Marquis Ito Hirobumi, with all his cabinet, except the minister of war, **resigns,** on May 1, owing to the failure of the finance minister to carry out expected public works. He is succeeded, as premier, by Viscount Katsura Tara. Owing to the failure of her Chinese market and heavy expenditures for public works, a **serious financial stringency** results. A remarkable revival of interest in Christianity is reported.

1902. Treaty with Great Britain. (See GREAT BRITAIN.)

1903. Fears of a war between Russia and Japan disturb the closing months of the year. **Russia attempts to gain a foothold in Korea.** Japan's vigorous protest leads to extended diplomatic negotiations respecting the status of Japan and Russia in Korea and Manchuria. Japan insists on the maintenance of the sovereignty of China in Manchuria, a recognition of Japan's preponderating interests in Korea, and her right to protect those interests. Russia proposes a neutral zone in Korea, and insists that Japan recognize Manchuria as outside her sphere of interest. While fruitless negotiations are in progress **each side prepares for war.**

1904. Diplomatic relations with Russia are severed February 6. On February 8–9 the **Japanese attack the Russian fleet near Port Arthur** and disable several battleships and cruisers. They also destroy two vessels at Chemulpo. On February 10 war is formally declared.

Naval operations. February 6, the Japanese fleet sails for Port Arthur, where on February 8 and 9 it disables three battleships and five cruisers of the Russians. On the same day a **Russian gunboat and cruiser are sunk at Chemulpo** During the next two months several Russian vessels are sunk by colliding with Russian and Japanese mines. In May the Japanese lose a cruiser and battleship by mines and a cruiser by accident. August 10, the Japanese do great damage to the **Port Arthur fleet** off Yenta Island. August 14, the **Vladivostok fleet** is badly damaged by the Japanese, forty miles north of the Korean Straits. In July the Russians seize several British merchantmen in the Mediterranean and sink a British steamer off Tokyo. England's protest causes release of the captured vessels and a revision by Russia of her classification of contraband of war. October 14, the **Baltic fleet sails** from Revel, Russia, for the Far East. October 21, while near the **Dogger Bank** in the North Sea, it fires on **trawlers** from Hull, England, sinking one vessel and killing two men. For a few days war with England seems possible, but on November 25 the matter is referred to an international commission, in accordance with the Hague convention. The commission, consisting of admirals from Russia, France, England, United States, and Austria, is to meet in January, 1905. After the North Sea incident the Baltic fleet proceeds, and in December reaches the Indian Ocean.

Operations in Korea and Manchuria. February 8, the occupation of Korea begins by the landing of Japanese troops at Chemulpo. April 28 and 29, a Japanese force under **Kuroki crosses the Yalu,** defeating a considerable Russian force on May 1. From this date the occupation of Manchuria is carried on by three armies, while a fourth besieges Port Arthur. June 14–15, the "**second army**" **badly defeats** a force of 28,000 under Gen. **Stakelberg**. During July the Japanese are victorious in a number of minor engagements. August 25, the Japanese begin a general advance against Gen. **Kuropatkin at Liaoyang**. This battle, in which 400,000 men are engaged, lasts twelve days, and results in a Japanese victory barren of direct results, as the Russian army is able to conduct an orderly retreat. October 2, Gen. Kuropatkin begins an unexpected offensive, on October 9 the **battle of the Shakho River** begins, and the Japanese right wing is driven back, but at the same time the Russian center is successfully attacked. In ten days' hard fighting the Japanese regain most of the lost ground and inflict severe losses on the Russians. At the end of the year the two armies are quartered along the Shakho River.

Port Arthur siege. Land operations against Port Arthur begin in May. By the end of July the Japanese are within firing distance of the main forts. The engineering siege begins in early August. First general assault, August 19 to August 25, results in the **capture of Pantang Mt.** Another general assault, September 15 to September 20, captures many advance defenses. There is a third assault, October 25 to October 30, and a fourth, November 26 to November 30, in which **203-Meter Hill** is captured. From here the Japanese bombardment disables four battleships and two cruisers, and is then directed against the town, doing great damage. December 18, 22, and 28, additional forts are taken, and on January 1, 1905, Gen. **Stössel surrenders Port Arthur** to Gen. Nogi after one of the most desperate series of siege engagements known to history. 24,000 men and 878 officers are taken prisoners.

Up to the surrender of Port Arthur the Japanese losses are estimated at 92,000 men, and seven warships sunk; the Russian losses at 81,000 men, and thirty warships sunk and disabled.

1905.

War with Russia. Land operations. The capture of Port Arthur releases General Nogi and 70,000 men, who at once march northward to join Marshal Oyama, who is in command of the Japanese forces in Manchuria. February 20, the advance begin a series of engagements until March 15, known as the **battle of Mukden**, one of the greatest in history. About 400,000 men are engaged on the Russian side and 500,000 on the Japanese. The battle line extends over 100 miles in length. By a strong flanking movement by Nogi on the Russian right and right rear and a simultaneous movement by Kuroki toward the Russian left, Kuropatkin's line of communications and retreat is menaced, and before tremendous pressure on his center he is forced to retreat in some disorder. The **Japanese occupy Mukden** on March 10. The Russians fall back 40 miles north to Tie Pass, 300 miles south of Harbin. March 16, this pass also falls into the hands of the Japanese. The next day **Kuropatkin resigns and is succeeded by General Linevich**. The Russians rally again 108 miles north of Tie Pass, but no further fighting of any importance occurs, although there is vigorous skirmishing, June 16–19. July 8, the Japanese forces occupy Korsakovsk on the island of Sakhalin, and on July 31 the **Russian forces on Sakhalin surrender.**

Naval operations. The **Baltic fleet,** under Admiral Rozhestvenski, passes part of the winter and early spring in maneuvers and target practice off Madagascar. The fleet enters the China Sea early in April, passing Singapore, April 15. The fleet remains so long at Kamranh Bay in French Indo China that Japan protests to France against breach of neutrality. The Russian fleet thereupon leaves, and after meeting the second squadron under Admiral Nebogatov sails northward. Admiral Togo, in command of Japanese fleet, with naval base at Masampo, Korea, awaits the Russians, of whose movements he is kept informed by scouts, and finally makes his attack off Tsu Island in the eastern channel of Korea Strait. The battle and pursuit continue through the afternoon of May 27 and all of May 28, and result in the practical **annihilation of the Russian fleet.** Three cruisers escape to Manila, where they are interned. One cruiser and one destroyer reach Vladivostok. Two battleships, two coast defense vessels, and one destroyer are captured; seven battleships, six cruisers, one coast defense vessel, one repair ship, and many destroyers are sunk. The Japanese lose only three torpedo boats.

Peace negotiations. The destruction of the Russian fleet convinces the world that the war should be ended. The initiative is taken by President Roosevelt. On June 8 the President sends an identical note to the Japanese and Russian governments suggesting a peace conference and offering his services in arranging time and place. Both nations accept. Russia appoints as plenipotentiaries Sergey Witte and Baron Rosen, and Japan appoints Baron Komura Jutaro and Mr. Takahira Kogoro. The first meeting is August 9, at the Navy Yard at Portsmouth, N. H. After much discussion and modification of the original Japanese demands, **peace is arranged** upon the basis of the recognition of Japanese preponderant influence in Korea, evacuation of Manchuria by both armies, the transfer to Japan of Russia's lease of Port Arthur, return of civil administration of Manchuria to China, transfer to Japan of Chinese Eastern Railway between Port Arthur and a point 10 miles south of Harbin, and the possession of southern Sakhalin by the Japanese. On September 5 the plenipotentiaries sign the terms of peace, and on October 15 the treaty is signed by the Mikado and the Czar.

The treaty is a great disappointment to the Japanese masses, and riots break out in Tokyo, which are quelled by the proclamation of martial law. The new Anglo-Japanese treaty (see ENGLAND) is also influential in allaying dissatisfaction.

1906. In January a famine develops in the northern provinces, especially Miyagi, Fukushima, and Iwate. There is enormous loss of life and great suffering. Generous financial aid is received from the United States.

October 28, storm at Boto Island, Japan, wrecks more than 250 fishing boats, drowning about 800 persons.

1907. July 18, at the suggestion of Japan, the **Emperor of Korea abdicates** in favor of the Crown Prince. Rioting of Koreans in Seoul and elsewhere follows, but is suppressed.

July 24, an agreement is concluded at Seoul, Korea, by which all legislation and all important executive acts are made subject to the approval of the Japanese resident-general, Korea's autonomy thus coming to an end.

1908. January 25, the emigration of laborers to Hawaii is discouraged by the government.

February 29, Japan demands and receives of China indemnity and apology for seizure of the *Tatsu Maru*, a Japanese vessel with a cargo of arms.

March 23, the steamer *Lutsu* is lost with 200 passengers and crew.

April 30, the cruiser *Matsushima* is sunk off the Pescadores Islands by an explosion of the magazine.

June 16, Japan confiscates the property of the Emperor of Korea.

August 30, the "Exposition of 1912" is postponed till 1917; the budget is curtailed $100,000,000.

September 4, fire in Niigata destroys 4,000 houses.

October 25, the Formosa railway is opened, 334 miles long.

1909. February 2, Count Komura Jutaro, minister of foreign affairs, states that friendship with the United States is absolutely essential.

October 26, **Prince Ito,** returning from Korea, is assassinated by a Korean irreconcilable at Harbin.

JAPANESE POSSESSIONS.

KOREA.

KOREA is a peninsula, situated south of Manchuria and west of the Sea of Japan. The kingdom is said to have been founded by a Chinese colony during the Chow dynasty, but little is known of its history until the close of the fourteenth century. It is so situated between China and Japan that through more than three hundred years it was attacked and almost destroyed by each in turn. Korea aimed at complete isolation from the rest of the world and in consequence was known as the "Hermit Kingdom." In 1866 the French endeavored to force their way to the capital and secure redress for the massacre of some Catholic missionaries. They captured and burned Kang-wha and then retired. An expedition from the United States in 1870 had no better success in the effort to obtain satisfaction for the burning of the *General Sherman*, an American schooner, and for the murder of the crew.

Japan forced a commercial treaty upon the Koreans in 1876. The United States secured a treaty in 1882, and Great Britain, France and Russia followed in the order named. The ports opened were Fusan, Yuensan and Chemulpo. The Koreans were most reluctant to grant these concessions. In consequence a serious insurrection broke out in 1884. Between 1891 and 1894 many attempts were made to institute enterprises under foreign auspices. The officials of the kingdom were suspected of favoring foreigners and in 1894 there was another violent rebellion, directed both against official despotism and the few Europeans. The Chinese Viceroy, Li Hung Chang, dispatched a contingent of troops to uphold the Korean government. Japan, denying the right of China to interfere, was offended at this action and presented an ultimatum, demanding that the Chinese acknowledge the independence of Korea, and also that the Korean government institute certain reforms. War ensued between Japan and China; the latter was utterly defeated, and was obliged to evacuate the peninsula. Korea was thus delivered from its old-time nominal allegiance to China, but only to be distracted by the rival machinations of Japan and Russia, each of which wished to dominate the king and court. The progress and result of the Russo-Japanese war in 1904–5 rendered the political effacement of Korea by Japan only a question of time. Enforced concessions followed in succession until in 1906 a Japanese Resident-General was stationed at Seoul. In 1907 it was further conceded that all Korean administration and all high appointments should be subject to the approval of the Resident-General, and that all offices were open to the Japanese.

Government. The dynasty was founded in 1392. The present emperor, who claims to be the thirty-first of his line, succeeded to the throne in 1907, the abdication of his father having been required by Japan.

Industry and Labor. The people are engaged in agriculture in a primitive way. Cotton, rice, grain of all kinds, and tobacco are raised. Gold, copper, coal and iron are found. A gold mine is worked by an American company at Yuensan.

Religion. The upper classes are disciples of Confucius. Christian missions, Greek Orthodox, Protestant and Roman Catholic, have accomplished much. Otherwise, save for the worship of ancestors, little attention is paid to religion.

Education. Under the Japanese influence, schools are being established. Formerly they were almost wholly wanting except as provided by the missions.

Defense. This, as well as the police system, is under the control of the Japanese.

The area is 71,000 square miles. The estimated population is 10,000,000.

FORMOSA.

FORMOSA, area 13,458 square miles, in 1908 estimated population 3,079,692, is an island east of China and between Formosa Strait and the Pacific. Ceded by China in 1895, it took Japan six years to overcome the armed resistance of the natives. Japanese administration has been of great material benefit to the island. Hospitals, artesian wells, waterworks, a drainage system, common roads and schools have been introduced. Rice, tea, sugar, jute, camphor are produced. Manufacturing interests are being developed.

LIBERIA.

LIBERIA is situated at the upper angle of the southwestern coast of Africa. Its coast line is about 350 miles in length and extends from the British colony of Sierra Leone to the French colony of the Ivory Coast.

Liberia is the record of an experiment. In 1811, the American Colonization Society was organized at Princeton, New Jersey. The avowed object was to establish in Africa a colony to be peopled with American freedmen and recaptured slaves. In course of time the society sent out shiploads of American Africans to the number of 18,000. A commission was sent to the African coast to select a site for a settlement. The first colonists arrived in 1820. Two years afterwards they removed to Cape Mesurado. Civil government was established under the auspices of the society in 1824. The republican form was adopted. Four years afterwards a regular constitution was prepared. The home society retained control for nearly twenty years and then surrendered everything into the hands of the Liberians. In 1857, the little colony of Maryland, which had established itself as a republic to the east of Cape Palmas, was united with Liberia. The state grew, but it cannot be said to have flourished. The experiment of a free government by the negroes has been measurably successful, but the destruction of African slavery in the United States and other changed historical conditions have impeded rather than promoted the African republic.

The area is not far from 43,000 square miles. The inhabitants, all Africans, are supposed to number about 1,500,000.

LUXEMBURG.

THIS, the only independent Duchy in Europe, is situated between France, Belgium and Germany. Until 1384, it was a county; then it became a duchy, and its dukes in the fourteenth and fifteenth centuries several times occupied the imperial throne. It passed by turns to Burgundy, Spain, France, Austria, again to France. After the fall of Napoleon it was created a Grand Duchy and given to the Netherlands. On the rise of Belgium in 1830, half of it was assigned to the new kingdom. The other half, now the duchy, was neutralized in 1867 and in 1890 its connection with the Netherlands was severed. A mountainous region, occupying an important strategic position, the possession of the duchy has long been coveted by France and Germany. The disposition of it is of great consequence to Europe. The present Duke has six daughters, but no sons. The Chamber of Deputies in 1907 passed a bill, vesting the succession in the eldest of these daughters.

Government. The Duke is the executive, and there is a Chamber of 45 Deputies, elected by the cantons for 6 years.

Industry and Labor. Mining and smelting are the most important occupations.

Religion. All but about one and a half per cent of the inhabitants are Roman Catholics.

Education. In addition to primary and secondary schools, it has a seminary, and one institute for the deaf and dumb.

Defense. Being neutralized, there is no standing army.

The area is 998 square miles. The population exceeds 240,000.

MEXICO.

MEXICO as a state under Spanish rule antedates the oldest settlements of the French and English in the New World. The conquest of the empire of the Aztecs followed hard after the discovery of America. The viceregal government established by Charles V. flourished for a season, and at the middle of the sixteenth century was the most important dominion of the white race west of the Atlantic.

In the long interval between the date just mentioned and the year 1821, sixty-four Spanish viceroys, of whom only one was born in America, ruled in succession in the ancient capital which Cortes had wrested from Montezuma. During this period four classes of people quite distinct in character had appeared as the subjects of the Mexican viceroyalty. These were, first, the native Indians; second, the creoles, of Spanish descent but Mexican birth; third, Spaniards born in Europe; and fourth, the mestizos, or half-breeds, who were crosses between the other classes and the Indians.

Such was the condition of Mexican society at the beginning of the nineteenth century, when the revolutionary movements in Europe suggested a revolution in Mexico. The second decade of that century was filled up in Mexican annals with attempts to overthrow the royalist government, and these attempts were successful in the years 1821–22.

Such movements, however, do not fundamentally change the character of a people. The republican system which was established on the ruins of the viceroyalty was more turbulent even than the government which it replaced. From the date of the revolution for about half a century little progress was made towards the establishment of a permanent and orderly administration. In 1835, the confederacy of states was changed into a consolidated republic, of which Santa Anna was nominal president and virtual dictator. For the next twenty years he was by turns chief, exile, and captive, through a series of turbulent revolutions. In the meantime Texas declared and successfully maintained its independence. Nine years afterward it was admitted into the American Union. A dispute about the Texan boundary brought on war with the United States, to which, on the conclusion of peace, Mexico ceded territory north of the Rio Grande. Santa Anna, who had led his country's forces in the decisive struggle, was finally deposed in 1855, and in 1858 the able and patriotic Benito Juarez gained the presidency. He instituted a course of vigorous reforms, including the separation of church and state. The church party took advantage of an international dispute to intrigue with the French, and Louis Napoleon sent an army of invasion. An assembly of notables declared for a hereditary empire, and the Archduke Maximilian of Austria was induced to accept the crown. The struggle with the forces under Juarez continued until the hands of the United States were freed by the conclusion of its own civil war. It then was able to enforce the Monroe doctrine and notified the French Emperor that he must withdraw his troops. An army corps on the frontier was ready to emphasize this communication. The Emperor yielded and ordered the French soldiers to return to France. Maximilian soon fell and independence under President Juarez was restored. Juarez was succeeded in the presidency by General Diaz, whose present term, his seventh in office, ends in 1910. He is a strong and sagacious ruler.

Government. Mexico is a federal republic. Territorially it consists of twenty-seven states, three territories, and a federal district. The division is analogous to that of the United States; each of the subordinate parts manages its own local affairs, and all are bound together according to the provisions of the Constitution of 1857. The executive power is vested in a President, who is chosen by electors of the people in a general election. His term of service is six years. According to the provisions of the constitutional amendment of 1887, he may be indefinitely reëlected. The legislative power is vested in a Congress consisting of two bodies, a Senate and a House of Representatives. The members of the latter body are chosen on an apportionment of one member to each 40,000 inhabitants. Members of the Senate are chosen, two from each state, in the same manner as the representatives, that is, by manhood suffrage. Congress meets annually, and remains in session from April 1st to May 31st, and from September 16th to December 15th. In the executive administration, the President is assisted by a council or ministry of eight members. Mexico is thus in its theory a consistent democratic and federal republic. But under these constitutional forms there has been exercised the influence of a personality so strong and dominating, that what Mexico would be without President Diaz must remain a problem. The future is to show that under his leadership the people have been developed into capacity for genuine self-government.

Industry and Labor. Mexico, though having a fertile soil and one of the most salubrious climates in the world, has in her industrial evolution hardly passed beyond the primitive condition. Vast areas of land have not been reclaimed. The mountain regions and the native forest occupy a large part of the country. Until 1863, the ownership of the land was rendered difficult by restricting laws. In that year and again in 1894, more liberal provisions

for landownership were made. The chief agricultural products are wheat, sugar, henequen, oranges, cotton, dyewood, coffee, maize, rice, tobacco, cacao and aguardiente. The live-stock interest rivals that of Texas. Northern Mexico alone produces about one and a half million cattle, two and a half million goats, one million horses, and one million sheep, annually.

The mineral wealth of Mexico includes rich mines of gold, silver, lead, iron, copper, quicksilver, tin, and coal. The Mexican mines have been immemorially famous for their richness and easy yield. Productive enterprise in the country, however, is carried on in a listless manner and by crude methods. The people, partly from their ethnic derivation, and partly from their subtropical situation, are lacking in aggressive energy.

Religion. The religion of Mexico is the Roman Catholic; but all other forms of faith are tolerated. Since the struggle between parties in the administration of President Juarez the church has been independent of the state. Protestantism has made but feeble encroachment upon Catholicism. The acquisition of landed property by ecclesiastical bodies is forbidden by statute.

Education. Education is free, the schools being supported by the state. Attendance upon the schools is compulsory, and the law is well enforced. The higher education is provided for in colleges, seminaries, and secondary schools. After the divorce of church and state, private and clerical schools were multiplied. The primary schools, numbering 9,194, are supported in part by the Federal and State governments and in part by the municipalities. There are 36 schools for secondary instruction, 65 professional schools and colleges, 20 normal schools and several for the teaching of commerce, engineering, mining and all pursuits. English is taught in all public schools.

Defense. The attempt to render military service obligatory and universal encountered so strong opposition that it was abandoned. The army is recruited by voluntary enlistment, supplemented by conscription which the wealthier classes escape. The army on a peace footing contains 26,600 men and on a war footing 84,500.

The area is 767,005 square miles. There are about 14,000,000 inhabitants.

1520. Mexico is **invaded by the Spaniards** under Fernando Cortes, who with a small force makes his way from the coast to the capital. In the course of two years he overthrows the ancient empire of the Aztecs, whose last emperor, Montezuma, is imprisoned and slain.
1522. A regular government is established in Mexico under Cortes.
1528. A new administration under Nuño de Guzman is established; his government is so severe that he is deposed by Charles V.
1535–1550. Antonio de Mendoza, first viceroy of Mexico, brings the province into an enlightened condition; money is coined, and a printing press is established in the capital.
1789–1794. Juan Vicente Pacheco administers the government; the city of Mexico is paved and lighted; regular methods of government are introduced.
1808. The influence of the overthrow of the Bourbons is felt in Mexico.
1810. An insurrection against the existing order is headed by the priest Miguel Hidalgo; he is captured and shot.
1813. A national Congress is convened, and the **independence of Mexico** is declared.
1814. The first Mexican Constitution is promulgated.
1815. The old government rallies and the popular party is defeated; the conflict becomes a guerrilla warfare, which continues for three years, when order is restored by the Spanish authorities.
1820. The revolution breaks out anew; **General Iturbide** becomes the leader of the popular party. The capital is taken by the insurgents.
1821. On August 24, O'Donoju signs for the old government the treaty of Cordova, by which the independence of Mexico is recognized.
1822. In May, General Iturbide is proclaimed emperor, with the title of Augustin I.; the patriot party again rises in insurrection, and under General **Lopez de Santa Anna** the Mexican republic is proclaimed.
1823. On March 19, Iturbide abdicates the throne and goes into exile.
1824. A new republican government, modeled after that of the United States, is proclaimed, and **Fernando Victoria** is elected president. Iturbide, returning to Mexico, is apprehended and put to death.
1828. The defeated party at the presidential election takes up arms and secures the government.
1829. A Spanish army under General Barradas is sent to Mexico, but is defeated and compelled to surrender. The republic of Mexico is formally recognized by the United States.
1833. General Pedraza is a second time driven from the presidency; General Santa Anna, who leads the insurgents, seizes the executive office and institutes many reforms.
1835. The constitution of 1824 is abolished and a new form of government, more democratic than its predecessor, is instituted.
1836. **The people of Texas revolt** against Mexican authority, and President Santa Anna, undertaking an expedition against them, is ruinously defeated at **San Jacinto.** The **Texans declare independence** and seek the sympathy and recognition of the United States.
1841–1844. A period of confusion ensues, at the end of which the constitution of 1835 is restored, and Santa Anna is first elected and then deposed from the presidency.
1845. **Texas,** which has been seeking annexation to the United States, **receives admission** by a joint resolution of Congress. The new State is populated largely by American settlers, who have reëstablished slavery after its abolition by Mexican law; its acquisition as slave territory becomes a leading issue in American politics, and is sanctioned by the election of President Polk (1844).
1846. As boundary between Texas and Mexico, the former claims the Rio Grande river, and the latter the Nueces. President Polk orders General Taylor into the disputed tract; he is there attacked by the Mexicans; **Congress declares that war exists** by the act of Mexico. Taylor by stubborn fighting captures **Monterey,** and against heavy odds defeats Santa Anna at **Buena Vista.**
1847. General Scott captures **Vera Cruz,** and with hard fighting on both sides forces his way to the city of Mexico and captures it.
1848. In February, a treaty of peace is concluded at Guadalupe Hidalgo; **a vast area of territory is ceded** to the United States, and an **indemnity** of $15,000,000 is granted to Mexico.
1853. Santa Anna, who has been in exile since the close of the war, returns, and is elected for the fifth time to the presidency.
1855. A rebellion breaks out and the President is deposed.
1856. A national rupture occurs between the party of the administration and that of the church. Agitation for a more democratic constitution is renewed.
1857. The revised constitution goes into effect. Mexico repudiates a part of her debt to Spain, and appeals to the United States.
1858. Comonfort is expelled from the presidency by Zuloaga, who is in turn succeeded by Miguel Miramon. Chief Justice **Benito Pablo Juarez** claims the presidency, establishes himself at Vera Cruz, and is recognized by the government of the United States. An epoch of salutary reforms follows; secular authority is established over church pretensions; foreign powers threaten to interfere, but Juarez holds on his course.
1861. **A triple invasion of Mexico** — by Spain, England, and France — is threatened; the difficulties with Spain and England are adjusted, and their forces withdraw from Vera Cruz.
1862. The **French declare war,** and their troops under General Forey drive back President Juarez.
1863. The French occupy the city of Mexico. An assembly of notables resolves upon an hereditary monarchy with a Roman Catholic emperor, and elects the Archduke **Maximilian of Austria.**
1864. Maximilian arrives and the republicans are forced to a succession of retreats.
1866. Juarez wins several victories over the imperialists.
1867. Under remonstrances from the United States, the French troops under Bazaine are withdrawn. **Maximilian** is overwhelmed and captured at Querétaro, and **is shot,** June 19. Juarez reoccupies the capital.
1871. Juarez is again elected president, and by salutary methods arouses his countrymen from lethargy; a new era begins in the history of the republic.
1874. A reaction sets in, and an insurrection breaks out in which the insurgents attempt to restore the ancient *régime.* In the following year, the revolt gathers head, and President Leredo and the members of his administration are repudiated. Ten of the Mexican provinces support the insurrection.
1876. **General Porfirio Diaz** leads the revolt and secures the presidency. Trouble between Mexico and the United States relative to the international boundary line is settled by the concurrence of the two governments.
1880. Diaz is succeeded in the presidency by **Manuel Gonzalez,** whose administration of four years is peaceable and successful.
1884. General Diaz is again elected president of the republic. Friendly relations are cultivated between Mexico and the United States, and trade intercourse is greatly extended.
1891. In September, an insurrection breaks out, headed by Catarino Garza, who conducts a guerrilla warfare for two months; at the end of this time the insurgents are suppressed.
1892. In July, General Diaz is reëlected to the presidency for a third term; the constitution is altered to enable him to succeed himself.
1893. **Rebellious uprisings** are general; in the south, the insurrection is ended by the concession of the autonomous rights which were demanded. In the north, the revolutionists are unsuccessful.
1895. An Indian war against the white settlers breaks out in Yucatan; the government is obliged to send troops to quell the disturbance. The International Boundary Commission, appointed in 1892 to resurvey the United States boundary line, completes its task; the line from El Paso, Texas, to San Diego, California, is verified. A second commission is appointed to survey the boundary along the Rio Grande, from El Paso to the Gulf of Mexico.
1896. General Porfirio Diaz is elected to his fourth term in the presidency. Under his administration the **peace and good order** of the country are greatly promoted. Another Indian uprising occurs, headed by Santa Teresa, who leads the Indians on the frontier until they are defeated by the joint efforts of the Mexican soldiers and American militia.
1897. A rebellion of the **Yaqui Indians,** never subdued from the time of the Spanish conquest, **is ended** by the conciliatory policy of President Diaz, in June.
1900. **Diaz** is elected president for the fifth time.
1901. **Diplomatic relations with Austria,** severed by the execution of Maximilian in 1867, **are resumed.**
Second Pan-American Congress meets in the city of Mexico, October 22, to consider the promotion of closer relations between all American republics; uniform quarantine regulations, customs, and extradition; arbitration of international disputes; increase of international and transcontinental railway and telegraph lines. The nations represented are Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, Guatemala, Haiti, Mexico, Nicaragua, Paraguay, Peru, Salvador, United States of America, Uruguay, and Venezuela.
1902. The Pan-American Conference adopts a protocol declaring the principles of The Hague arbitration conventions to be American public law. Measures for sanitary protection and the proposed intercontinental railway are favorably reported.
January 16, an earthquake at Guerrero kills hundreds of persons.
1903. Industrial development in mines and railroads is marked. A new road on the Gulf coast is started; the road from Topolobampo on the Pacific coast to Fuerte is opened. Rich gold and copper mines are opened. Popocatepetl is purchased by Americans for $5,000,000 for its sulphur deposits.
1904. President Diaz, December 1, is inaugurated for his seventh term, this time of six years. **Ramon Corral is inaugurated vice president,** the first incumbent of the office, which was created in 1903.
In November a currency bill is passed which provides for the coining of a new silver dollar, and its maintenance at a value of 50 cents gold, **a step towards the gold standard.**
1905. The currency reform meets with popular approval. On April 2 President Diaz in a public address congratulates the country upon its adoption.
1906. June 1, riot of miners at Cananea, near United States boundary, is suppressed by Mexican troops.
1907. January 23, the **railway, crossing** the Isthmus of **Tehuantepec** from Coatzacoalcos on the Gulf of Mexico to Salina Cruz on the Pacific, is opened with great ceremony, President Diaz, the Ministers, and the Diplomatic Body being present.
1908. March 2, the Banco de Minero at Mexico is robbed of $300,000.
March 27, earthquakes in Mexico and Central America; great loss of life.
June 12, 4,000 troops are sent to put down a rebellion of the Yaqui Indians.
July 27, Mexico deports 600 Chinamen smuggled into the country.

MONACO.

THE PRINCIPALITY OF MONACO has an area of eight square miles. It is the smallest state in Europe. It is inclosed between the French department of

Les Alpes Maritimes and the Mediterranean. There is no elective assembly, the prince acting as absolute master. Its reputation is due to its casino, which is the gambling center of Europe. A Joint-Stock Company controls the gaming tables, having obtained a concession which does not expire until 1947. For this concession the Company annually pays the prince $350,000. From 1917 to 1927 the annual payment will be $400,000, during the next ten years $450,000, and then $500,000. Furthermore, in addition to this annual sum, it paid the prince a bonus of $2,000,000 in 1899 and is to pay him another bonus of $3,000,000 in 1913.

The population of the principality in 1900 was 15,180.

MONTENEGRO.

After the overthrow of Servia by the Turks at the battle of Kossovo in 1389 some of the Servians, unwilling to submit, took refuge in Zrnagora, the Black Mountain or Montenegro. There they maintained a rude but heroic resistance for more than five hundred years. The Turks were never able to subdue them, though they sent army after army against them, some small, some large. Their independence, under the name of the principality of Montenegro, was formally acknowledged by Turkey and Europe at the Congress of Berlin in 1878. At that time by decision of Europe the boundaries were "rectified" by an increase of several hundred square miles including Antivari and its seaboard.

The chief authority, since 1697, has rested in the family of Danilo Petrovich, who, proclaimed Vladika or Prince Bishop, that same year, gained signal victories over the Turks. He formed an intimate alliance with Russia, which country has always shown special regard for Montenegro and is regarded by Montenegrins with peculiar affection. The last sovereign, who ruled as Vladika, that is, who combined religious and secular functions, was Peter Petrovich II. He was both statesman and poet. His nephew Danilo, who succeeded in 1851, renounced the title of Vladika and assumed that of Gospodar or Prince. He was succeeded by his nephew Nicholas I., the present sovereign, in 1860.

Government. Formerly the Prince united in himself all legislative and executive authority and disposed of the revenues at his will. In 1905 a Constitution was granted, providing for popular representation, and Montenegro became a self-governing, hereditary monarchy. The first National Assembly or Skuptstina was elected in 1906. Each of the 56 capitanats or districts and each of the 6 towns chooses one deputy. Also there are 12 ex-officio members, making 74 in all. Among the twelve are the Metropolitan of the Eastern Orthodox Church, the Roman Catholic Archbishop of Antivari, and the Mussulman Mufti of Montenegro.

Industry and Labor. Nothing can be more primitive. During centuries the only object was to obtain the necessities of life, and it is largely so still. Oats, maize, buckwheat, barley and tobacco are produced, and sheep, goats, swine and cattle are raised.

Religion. All the people, except 10,000 Roman Catholics and 14,000 Mussulmans, belong to the Eastern Orthodox Church.

Education. There are schools for elementary education, a boys' college, a theological seminary, and a girls' high school, the expense of the latter defrayed by the Empress of Russia. There are few adult male Montenegrins who cannot read and write.

Defense. Formerly every Montenegrin was a soldier and defense of home was his chief occupation. Now every household contributes at least one man to the army. Nominally service is from sixteen to sixty years of age, but there is no Montenegrin too young or too old to fight in case of necessity. Every village musters at least ten times a year for rifle practice. Between 50,000 and 60,000 men can be put into the field. Almost all the military equipment was presented by Russia.

The area is 3,630 square miles. The population is roughly estimated at about 240,000.

MOROCCO.

Ethnically and geographically considered, Morocco is the westward extension of Algeria. In the former, however, the mixture of races is more profound and universal than in the latter. The body of the population is Berber. After this the Arab Bedouins are next in numbers and influence. Then in the order named come Moors, Jews, and Negroes. All of these races have intermingled to a great extent. There is a like jumble of languages — Berber, Arabic, Spanish, and Nigritian. As a country Morocco is the most fertile of Northern Africa excepting only the Nile Valley. Anciently this region was a part of that Mauritania so much named in connection with the history of Rome.

Morocco was the last of the North African countries to fall before the Mussulman invasion of the seventh century. Its situation assured this, for here the tide of conquest would be inevitably deflected across the strait into Europe. The Islamites swept through Morocco as through Tripoli and Algeria to find their lodgment and development in Spain. The religion of the prophet, however, was accepted by the Moors as well as the principal institutions of the conquerors.

In 787 the kingdom of Fez was established, and in 1058 the independent kingdom of Morocco was founded on what had been the dominion of the Caliphs. In the next two centuries several dynasties followed, but the trace of these is hardly discoverable in modern history. In 1269, Morocco was taken by the princes of Beni-Merin. Thus was founded the dynasty whose rule extended over both Morocco and Fez. In 1610, the Moors from Spain, partly as immigrants and partly as invaders, threatened the kingdom with overthrow. At the middle of the 17th century, Ali Sherif, of Yanbo near Medina, gained an ascendency in Morocco and founded the dynasty of the Alides.

We note in 1822 the beginning of the reign of Solyman, in whose time Christian slavery in Morocco was abolished and piracy was suppressed. During the long protectorate of France in Algeria, the Moors sympathized with the Algerians and sent reinforcements to Abd-el-Kadir. In 1844 the combined forces were routed by the Prince de Joinville. The period from 1859 to 1873 was occupied in a struggle with Spain in which battles were fought, and a treaty finally reached by which Morocco was obliged to pay to Spain twenty million piasters with the surrender of territory and the concession of commercial advantages.

In 1873 the Dey Hassan came to the throne of the sultanate of Morocco. In 1880 a favorable commercial treaty was concluded with England. Two years afterward occurred the insurrection of Sid Hosein, which was with difficulty put down, and in the following year Great Britain interfered to secure the suppression of the slave trade.

Sultan Mulai-Abd-el-Aziz succeeded in 1904. His reign was troubled and full of confusion. His brothers rebelled. Brigands infested the land. His subjects, whom he could not control, committed outrages on foreigners, whom he could not protect. France and Spain interfered. In 1906 a conference of the European Powers, at Algeciras in Spain, the United States being represented, in a general way prescribed for Moorish affairs and drew up a system of police. His subjects denounced Mulai-Abd-el-Aziz for foreign sympathies. His brother, Mulai-Abd-el-Hafid, proclaimed himself sultan at Morocco city (Marakesh) in January, 1908, and again at Tangier in August.

Government. The sultan is absolute and irresponsible, save as affected by foreign influence or by dread of revolution.

Industry and Labor. Millet, the chief food of the country, wheat, barley, maize, dates, beans and canary seed are grown. There are large flocks and herds. The horses and sheep are of fine breeds.

Religion. All the inhabitants, except about 20,000, belong to the Malekite sect of Orthodox Mussulmans. There are about 10,000 Christians.

Education. Elementary, and imparted in the mosque schools.

Defense. There is a sort of nondescript bodyguard of the sultan, the Scotch commander of which was captured by brigands in 1907 and held for eight months for ransom. There is also a mounted police force of about 7,000 men and an unorganized body of perhaps 40,000 cavalry and infantry. There are two government vessels.

The area is not far from 220,000 square miles. The population is estimated at from 4,340,000 to 4,580,000.

1058. **Kingdom of Morocco is founded** by the Almoravides.
1578. Morocco is invaded by Sebastian of Portugal, who perishes with his army at the battle of Alcazar, August 4.
1662. Tangier is taken by the English, who hold it until 1683.
1844. The Moors attack the French in Algeria, but are defeated at the battle of Isly, August 14, by Marshal Bugeaud, and make peace on September 10.
1859. October 22, Spain declares war against Morocco.
1860. Peace with Spain is made at Tetuan, Morocco agreeing to pay as war indemnity 400,000,000 reals.
1873. Mulai-Hassan becomes sultan.
1894. Mulai-Abd-el-Aziz succeeds to the throne.
1902. In September, **Mohammed**, the brother of Sultan Mulai-Abd-el-Aziz, **revolts** and is supported by the Berbers. This revolt expresses a strong protest against the foreign tendencies of the government.
1903. The revolt continues through the year with no decisive results.
The **Sultan dismisses all his European employees.**
1904. May 18, Ion Perdicaris, an American citizen, and his son-in-law, a British subject, are kidnaped from Tangier by the bandit Raisuli, and a demand is made on the United States for ransom. President Roosevelt refuses the demand, orders a squadron to Tangier, and on June 1 Secretary Hay demands "**Perdicaris alive or Raisuli dead.**" The captives are released, June 24.
1905. Conditions of unrest and disorder prevail throughout the year. Several foreigners are kidnaped or assassinated, necessitating action by their home governments. (For Franco-German trouble see France.)
1907. March 29, Ujda is occupied by the French. (See France.)
July 3, Kaid General Sir Harry Maclean, the commander of the Sultan's bodyguard, is **kidnaped** by the bandit Raisuli and held for ransom.
July 31, tribesmen raid Casablanca, killing several Europeans.
August 6, French and Spanish war vessels **bombard Casablanca,** and there is sharp street fighting. The French troops are more or less actively engaged with tribesmen and rebel Moorish troops during the remainder of the year.
1908. January 11, **Mulai-Abd-el-Hafid is proclaimed sultan** on condition of his waging war against Sultan Mulai-Abd-el-Aziz and opposing European influences.
January 16, the French defeat the Moors near Settal.
February 6, Kaid Sir Harry Maclean is released.
August 22, Mulai-Abd-el-Hafid, after defeating the forces of Sultan Abd-el-Aziz at Morocco city (Marakesh), is again proclaimed sultan.
September 22, the agreement of France and Germany on all Moroccan questions is announced.
September 25, arrest at **Casablanca** of German deserters from the French Foreign Legion greatly strains relations between France and Germany; the latter demands an apology from the French government. It is finally agreed to submit the matter to arbitration.
1909. February 9, German-French agreement concerning Morocco signed at Berlin.
May 22, Hague Court of Arbitration declares both France and Germany **at fault in Casablanca matter.**
July 19, Moorish tribesmen make fierce attacks upon Spanish troops at Melilla. Hard fighting continues until November.

THE NETHERLANDS.

The Netherlands, or Low Lands, or Hollow Lands, from which abbreviated we have Holland, occupied at the middle of the seventeenth century an important place among the powers of Europe. The long struggle for the independence of the United Provinces had ended, after a conflict of seventy years' duration, in a successful demonstration of nationality. One of the principal clauses of the Treaty of Westphalia was that which acknowledged the independence of the Dutch Netherlands. The territories of the Republic were extended by the addition of North Brabant and a part of Limburg.

Meanwhile, William II. had become Stadtholder instead of Frederick Henry, who had succeeded Maurice of Nassau, son of William the Silent. The strong preference for France shown by Charles II. after his restoration to the throne of England, and his contempt for the Dutch, led, in the first years of his reign, to a war with the Netherlands which cost him dearly. At this time the naval abilities of the Dutch were displayed in an admirable manner. Only four

years after the Treaty of Westphalia, Admiral van Tromp sailed into the English Channel, and mocked his adversaries by nailing a *broom* at his masthead!

The English rallied, however, and the Dutch were defeated. Soon afterwards Holland went to war with Portugal, and this conflict also ended adversely to the Dutch. England now became the assailant, and in 1667, after two years of alternate successes and defeats, Admiral de Ruyter sailed up the Thames as far as Chatham and sent the echo of his cannon into London. The next year the Treaty of Breda was concluded, after which, for a long period, England and the Netherlands united as Protestant powers in opposing the ambitions of Louis XIV. At length Prince William Henry of Orange was elected to the English throne, and the two powers became as one in the great battle with the Grand Monarch of France. The war of the Spanish succession ensued and the ambitions of France were circumscribed by the Treaty of Utrecht.

Upon the death of William III. without male heirs, the anti-Orange party in the Netherlands prevented the appointment of a Stadtholder. The Grand Pensionary was made the chief executive, and the affairs of the Republic were conducted by the States-General. Not until 1747 was the stadtholdership restored, first to William IV. and afterwards to his son, William V., who remained in authority until the outbreak of the French Revolution. With the beginning of the ascendency of Napoleon, in 1795, Holland was conquered by the French under General Pichegru and was converted into the Batavian Republic. This popular government held out for eleven years, and then gave place to the kingdom of Holland which Napoleon created for his brother Louis. That ill-starred ruler, after a reign of four years, was deposed by the French Emperor, and Holland was incorporated with France. After Waterloo, Prince William of Orange returned from his exile, and was declared king by the assembly of Holland, with the title of William I.

The Congress of Vienna dealt liberally in the construction of the new kingdom. In order to prevent the expansion of France in the direction of the North Sea, Belgium was included with Holland. This arrangement was maintained until 1830, when the people of Belgium, sympathizing with the Revolutionists in France, broke into revolt, declared independence, and chose Leopold of Saxe-Coburg for their king. This movement was supported by Great Britain, and Belgium was permanently detached from Holland.

In the Netherlands the reign of William I. extended to 1840, and that of his son, William II., to 1849. The latter was succeeded in turn by his son William III., who was succeeded by his daughter Wilhelmina under the regency of the Queen-mother. Wilhelmina was inaugurated as full sovereign in 1898.

Government. The present government of the Netherlands dates only from the year 1815. The constitution of the kingdom, however, has been twice revised; first in 1848, and afterwards in 1887. The government is an hereditary monarchy in the limited form. The female line is recognized only in default of the male line. In case of the failure of both the male and the female line, the reigning sovereign, acting jointly with both houses of Parliament, names or elects the successor to the throne. The executive power is vested in the sovereign solely while the legislative authority is exercised by the sovereign and Parliament conjointly. In ordinary matters the initiative in legislation belongs to the Parliament or States-General. This body consists of two houses. The upper house is composed of fifty members chosen by the states from among certain classes of the citizens highest in importance. The lower house comprises one hundred representatives who are elected directly by the people. In 1896, the Electoral Reform act was passed extending the right of suffrage to all male citizens not under twenty-five years of age not incapacitated by nature or special conditions. A small property qualification was imposed. In the executive department the sovereign is assisted by a ministry of nine members, as follows: Minister of Foreign Affairs and President of the Ministerial Council; Minister of the Interior; Minister of Finance; Minister of Justice; Minister of the Colonies; Minister of Marine; Minister of War; Minister of Public Works; Minister of Agriculture, Commerce and Industry.

The constitution of the Netherlands has many federal characteristics. The eleven provinces into which the kingdom is divided correspond in a measure to the states of the American Union. These provinces are designated as *The States*. The local independence of each is to a degree preserved, but in national affairs they constitute one sovereignty.

Industry and Labor. In no other country has nature been so much modified by man as in Holland. The country has been virtually created by human labor. The dead-level marsh, made up originally of alluvial deposits and of about ninety brackish lakes, is without minerals, and without a forest; and yet Holland has been converted into a most fruitful and productive region.

The natural elevations of the country are no more than sand dunes. Its rivers were arms of the sea, its soil naturally poor, its aspect forbidding and desolate; but in this precarious region labor has done its perfect work. A great population, wealthy and contented, has established itself in the realm, which has been literally taken from the sea and the bottoms of lakes, the waters of which have been drained away. Canals are everywhere; cities and towns are on every hand; productive fields and flower gardens extend to the horizon; and in the midst, civilization, as the result of the contest of man with nature, has established itself, bringing in the arts that humanize mankind.

The primary productions of Holland are agricultural. Mineral wealth is wanting, except that small quantities of bog iron have been found in a few places. Fully three fourths of all the lands of Holland are productive. The wooded area is less than nine per cent of the whole, though in Friesland the proportion is greater. All the productions of the north temperate zone abound in Holland, and in the greater part the fertility of the soil and the skillfulness of the cultivation have conspired to produce astonishing results.

Based on the agricultural productiveness of the country, the live-stock interest flourishes. The Dutch dairy is famous. The horses and cattle and sheep and swine are unsurpassed. In addition to the products of the earth, the waters yield abundantly. The fisheries, though not always equally successful, are still lucrative. Commerce, using these materials, flourishes. Time was when the commercial interests of Holland were superior to those of any other country in Europe.

Holland has more than six hundred shipyards. The manufactures include almost everything belonging to the industrial arts. The Dutch laborers, whether in the gardens and fields, in the pastures, in the fisheries, or in the manufactories, receive better rewards for their labor and are perhaps more contented than those of any other European country. Their emigration to other countries is unusual, and in prosperous times almost unknown.

Religion. The leading religious denomination of the Netherlands is the Dutch Reformed Church. But the state has no religious establishment. All other religions are tolerated and liberty of conscience is guaranteed by the constitution. The members of the royal family belong to the Reformed Church. The head of the Roman Catholic division of the people is the Archbishop of Utrecht, under whom are four bishops, namely, those of Haarlem, Breda, Roermond and Hertogenbosch.

Education. The educational system is not uniform or complete. The compulsory principle has not been adopted, and even primary instruction is not wholly free. The attempt to conciliate the various religions has prevented the complete secularization of the schools. The principle of state regulation and inspection is recognized, but has not been fully applied. The primary system is carried into effect by the act of 1878, largely modified by the act of 1889 and supplemented by the acts of 1901 and 1905. By the latter measure the public patronage of the schools was narrowed and private patronage extended. In the kingdom there are four universities of the first class, thirty classical schools, eighty-four secondary schools, eleven navigation schools, eighty-four middle-class schools, one polytechnic institution, 4,942 elementary schools, besides 1,158 infant schools or kindergartens. There are also many special and benevolent schools intended for the promotion of special branches of inquiry and for the instruction of the deaf, blind, and others who have been disabled in various ways.

Defense. The land frontier of the Netherlands is open through the greater part of its extent, and only a few fortresses have been erected for defense. The peculiar low-lying position of the country has suggested another method of checking the advance of enemies. This is the breaking of the dikes and the consequent inundation of the country. The seacoast is defended in part by land fortifications and in other parts by armored gunboats. All able-bodied citizens are subject to military conscription between the ages of nineteen and twenty-four years, but the annual contingent must not exceed 17,500. The national militia is not included with the regular forces, but is divided into two independent classes called the Active and the Resting Militia. All citizens between twenty-five and thirty years of age belong to the militia, and after that for another period of five years to the reserve. The regular Army on a war footing numbers about 41,000 men. The Navy has been created with a view to protecting the home coast and defending the East Indian possessions of the Dutch. The whole flotilla consists of nine battleships, seven cruisers, a river monitor, a gunboat, fifteen modern and forty old torpedo boats.

The area of the Netherlands is 12,648 square miles and the population in 1908 was 5,747,269.

1652. **War** breaks out between **Holland and England,** and the Dutch under Admiral Martin Tromp defeat the English under Admiral Blake near the Goodwin Sands, in November. In February of the following year, the Dutch are defeated off Portland Island, and again off the coast of Holland, August 10: Van Tromp is slain. A peace is concluded in 1654.

1656. The Dutch **destroy the power** of Portugal in **Ceylon.**

1659. The **convention of The Hague** is made with England and France.

1665. War again breaks out with England (see GREAT BRITAIN). In the following year a naval battle is fought in the Downs. In 1667, after **De Ruyter** has menaced London with his fleet (see GREAT BRITAIN), a treaty is made with England at Breda, in which France and Denmark join.

1668. Holland joins Sweden and England in a **triple alliance** against France. (See FRANCE and GREAT BRITAIN.)

1672. France secures the alliance of England, and the two nations declare war against Holland. Louis XIV. makes a campaign in Holland, and the Dutch make **William of Orange** their leader, with supreme authority.

1673. Frederick William of Brandenburg comes to the aid of the Dutch, but is forced into neutrality by the French, who capture Maestricht and Treves. The forces of William of Orange, with the aid of Austrian allies under Montecuccoli, capture Bonn, and the **French** are forced to **abandon their designs.**

The Dutch occupy **New York and New Jersey** (see UNITED STATES), but these they surrender to the English in the following year.

1676. De Ruyter's fleet is defeated by the French under Duquesne, off the coast of Sicily, in April; De Ruyter is mortally wounded.

1677. The French overcome William of Orange at Cassel, in Flanders, in April, and take Freiburg. In the following year a **peace with France** is made at **Nimeguen.** (See FRANCE and SPAIN.)

William of Orange marries Mary, daughter of the Duke of York, afterwards James II. of England.

1688. The French again declare war against Holland.

1689. On the abdication of James II. **William of Orange is chosen king of England.** (See GREAT BRITAIN.)

1692. The Dutch aid the English in overcoming the French fleet off the fort of La Hogue, May 29. (See GREAT BRITAIN and FRANCE.)

1695. Marshal Villeroi leads the French in an invasion of the continental possessions of William of Orange.

1697. **The Peace of Ryswick** is concluded, September 21, ending the struggle with France. (See FRANCE.)

1702. Holland joins England in the **war of the Spanish Succession;** the ships of the two powers overcome the French and Spaniards at Vigo. (See FRANCE, SPAIN, and GREAT BRITAIN.)

The Dutch Republic, on the death of William III. of England, passes under the administration of the **Grand Pensionary Heinsius.**

1703. The Dutch under Coehorn reduce Bonn.

1713. Peace is restored by the **Treaty of Utrecht,** April 11.

1715. The Barrier treaty is signed with Austria and England; the Dutch are permitted to garrison parts of the Austrian Netherlands.

1717. An **alliance** is formed with **France and England.** In the following year Austria joins the league against Spain. (See SPAIN, etc.)

1720. The grand pensionary dies, and the executive authority passes to his successors for a quarter of a century.

1747. The adherents of the **Orange party** gain the ascendency, and William IV. is made stadtholder of the Republic.

1751. William V. succeeds his father in the office of stadtholder, which he holds until the outbreak of the French Revolution.

1780. England declares war against Holland; **a conflict for the naval supremacy** follows, in which Holland is defeated (see GREAT BRITAIN). Peace is concluded in 1784.

1787. Civil strifes occur in the Low Countries, caused by opposition to the House of Orange, but Prussia interferes and restores order.

1789. The Austrian Netherlands revolt.

1795. The **French republicans,** having invaded **Holland** in 1793, **subdue the country;** the Batavian republic is established.

1796. The Dutch in Ceylon are expelled by the English.

1810. Holland is **annexed to the French empire.** (See FRANCE.)

1815. By the decree of the congress of the powers at Vienna, signed **June 9,**

Habitations of Mankind.

1. Interior of Eskimo Hut. Owing to the excessive heat generated by the oil lamp in these small snow houses, the inhabitants as a rule discard all clothing in their huts. They mostly live in polyandry.
2. Greenlanders. Eskimos. Moss-covered hut and circular snow house in background.
3. Ostyak Hut. Ostyak in winter costume; Northern Siberia.
4. Fuegian Hut. Natives in front. Though the cold of the climate is intense, the natives go about nearly nude, shifting a sealskin robe, fastened around their neck, from one side to the other, according to the direction of the wind.
5. Arab Tent. Tunis.
6. Kirghiz Tent. Western Siberia. Owner a man of means. Bride on horseback.
7. Kurdish Tent. Western Asia, Kurdistan.
8. Sioux Indian Tent.
9. Pueblo Dwelling. Built of adobe—sun-dried brick. See *Carl Eikmeyer*, "*Among the Pueblo Indians*," *Nordenskjöld*, "*Cliff Dwellers*," "*Fifteenth Annual Report, Bureau of Ethnology*," *Washington*, from which latter the figure of the Kachina Mask No. 9*a* is copied. Figure in doorway is a Taos Indian. Woman with child is from a Hopi village.

10, 11, and 12. Mambu Huts. Central Africa. Women at work constructing dwelling; sick man and sorcerers in front of huts.

13. Guahariba Huts. Amazon River.
14. Sambioa Hut. Central Brazil; after Paul Ehrenreich.
15. Kamayura House. Bororo Cazik, in front Kamayura woman carrying seven-year-old child on hip; after Karl von den Steinen, "*Unter den Naturvölkern Central Brasiliens.*"
16. House in Malbato. Island of Luzon, Philippines.
17. House from Village of Pertoemboken. Island of Sumatra.
18. Communal House of the Bahnars. Savages of the South of Anam.
19. Aerial Dwelling. Memiaou, New Guinea.
20. Tree Dwellers. East Coast of New Guinea. At the foot of the tree two women mourners in front of the House of the Dead; Kalo, Kemp Welch River.
21. Lake Dwellers. Sowek, New Guinea.
22. Anamese Floating Village.
23. Skye Crofter's House. Scotland.
24. Modern American Dwelling House.
25. Modern Business House. "Sky scraper."

For description see previous page.

Holland and Belgium are merged as the **Kingdom of the Netherlands** under the House of Orange.

1830. The Belgians revolt. August 25, a Dutch force, after having marched into Brussels, is ordered to withdraw. In September the Congress of Belgium declares her independence, and in the same month the Belgian army enters Antwerp; whereupon the Dutch in the citadel bombard the city. A conference of the powers is held in London, and in the following month the independence of Belgium is formally recognized.

1831. In February the crown of Sovereign Prince and its succession, under General Clause, successor, becomes 25. This declaration completes the separation of Belgium.

1839. A settlement between the Netherlands and Belgium is formally effected by which Luxemburg and Limburg are determined.

1840. William I. of Holland surrenders the crown in October and is succeeded by his son, **William II.**

1848. The Boers establish the **Transvaal republic.** *(See Africa.)*

1849. **William II.** dies and is succeeded by his son, **William III.**

1872. The Dutch begin a war on Acheen, but they are disastrously defeated. The struggle in Sumatra is, however, continued, and in 1879 a victorious peace with the natives is concluded.

1890. William III. dies, November 23, and is succeeded on the throne of Holland by his daughter, **Wilhelmina Helena Pauline Maria,** who Queen Emma as regent. The Duke Adolphus of Nassau succeeds to the sovereignty of Luxemburg.

1891. The elections for the States-General are carried by the Liberals.

1892. The defensive naval convention with the German provinces of Germany is completed and ratified as far as Wilhelmina.

1893. The war in Acheen continues, and in March a battle is fought on the Tamiang River in which the Dutch are victorious.

1894. The Dutch succeed in the East Indies, and agreeing with the revolutionists of Acheen are turned out of their native country, August 24.

1895. International exposition of arts and industries in Amsterdam.

1896. The Electoral Reform bill, providing for a new system of parliamentary representation, becomes a law. The war in Acheen continues with varying success.

1897. The new electoral reform law goes into operation, May 15.

1898. Wilhelmina is enthroned September 13.

1899. International Peace Conference at The Hague. (See Europe.)

1901. The Hague Court of International Arbitration, formed in accordance with the convention adopted July 29, 1899, at the Peace Conference at The Hague, is organized January 10. The nations represented are Austria-Hungary, Belgium, Denmark, France, Germany, Great Britain, Italy, Japan, Netherlands, Portugal, Roumania, Russia, Spain, Sweden and Norway, and the United States.

Queen Wilhelmina weds Duke Henry of Mecklenburg-Schwerin, Feb. 7. By a wedding treasure alliance is formed between the extreme Japanese and extreme Russian powers of the world, and the success of the Russian arms and extreme Japanese government is delivered to the subjects of Japan.

1903. Owing to a crisis in state affairs in January the government frames a law making an orphan of state employees attending and but gets a severe penalties. A general strike declared April 3 is suppressed by April 10, and the law is passed April 12. The municipal strike ceased in May.

1904. In October the government chooses a site for the palace of the Hague Tribunal, for the construction of which Mr. Andrew Carnegie has offered $1,500,000.

1905. July 24 a Liberal Ministry is formed with Mr. Heemskerk as premier. The new cabinet is pledged to an extension of the franchise.

1907. February 24, Eleven-hundred-ton battleship Zeerust is launched. She is the largest ever built in Holland and more than 150 are drowned.

June 15, second Peace Conference opens at The Hague.

November 6 a bill is introduced in the legislature increasing the remuneration of 4,000 miles from the Dutch Indies.

1908. June 15, representatives from 21 nations are present in the International Equal Suffrage Congress in Amsterdam.

July 6 Curaçao declares the same government for improvement in commercial relations with Venezuela. July 26 a crisis is reported in Venezuela to prevent Dutch interests, the Dutch Minister to the West states, passes from Venezuela to Curaçao on July 31. July 29, the Dutch West Indies consular Venezuelan relations and are restored in March. August 1 President Castro of Venezuela arrives at the Dutch island and the Dutch minister to leave the country. August 24 the United states give Holland to understand that she may take active measures against Venezuela, but the understand that she may take active measures against Venezuela, but the understand that she may take active measures against Venezuela, but the no annexation of territory is to be attempted. October 26, the Dutch demands for a settlement of outstanding difficulties are forwarded refused by President Castro. November 7 Holland declares the closure of Venezuelan ports. November 13 a Dutch warship bombards Puerto Cabello and lands 100 men. December 10 a Dutch warship bombards Puerto Cabello and lands 100 men. December 10 a second bombardment takes place.

1909. January 16 the government decides that the Dutch navy shall consist of twelve battleships and six armored cruisers.

April 7, Queen Wilhelmina of Holland is married to Duke Henry of Mecklenburg-Schwerin.

DUTCH POSSESSIONS.

The Kingdom of the Netherlands has colonial possessions in both the West and East Indies, which together comprise an area of more than 780,000 square miles and contain, by more than 34,000,000 people.

In the West Indies are Dutch Guiana, or Surinam, and Curaçao.

Dutch Guiana. Since the cession of Berbice in 1803 when Dutch Guiana was assigned to the Netherlands overlooking for the New Netherlands of North America, of the land which is Dutch Guiana, but portions remained to the Netherlands on acquisition of Berbice. It is a small territory of 46,060 square miles with 74,000 inhabitants in 1905. The governor and high officers are named by the sovereign. The there is a representative body called the Council of State, the members of which are chosen for a term of six years. There is one member for every 200 voters.

Curaçao is the name given to a little cluster of islands north of Venezuela, of which the largest is Curaçao with area of 308 square miles and population of 51,000 in 1905. The islands under Dutch control is Aruba here.

In the East Indies the more important possessions are Java, Madura, Sumatra, and Celebes, besides these there are Borneo and numerous other islands of New Guinea. Most of these were acquired by the Dutch East India Company, formed in 1602 and dissolved in 1798. On its dissolution the home government took over the colonies.

The entire area is about 780,000 square miles with a total population of approximately 36,000,000.

Java ranked in importance with area of 48,814 square miles and 30,000,000 inhabitants. It, with the neighboring island of Madura, is divided into seventeen residencies, each ruled by a Resident assisted by Assistant Residents and Controleurs. Under them is a host of functionaries, Dutch and native. The Dutch colonial army of about 39,000 of all ranks is entirely separate from the home army. One third are Europeans, including all the commissioned officers, cadets and a certain proportion of noncommissioned officers. The greater part of the land is government property. The chief products are coffee, sugar, tobacco, cinchona, indigo, tea and spices are the staple productions. Industry is entirely agricultural.

NORWAY.

The history of Norway reaches far back into the Dark Ages. As early as the eighth century the Vikings were afloat on the waters west of the North. Her natural environment predisposed to the conquest of England. War and herring were mingled in the saga-romance of part of Europe was in darkness. The conquest of Norway dates from the end of the ninth century. Soon afterward came the colonies from Iceland, the Faroes and Greenland. Harold Haarfager was converted and reformed and introduced Christianity. Slavery continued until 1300 and was not finally abolished by law in the Kingdom of Norway until 1814.

During the Middle Ages the history of Norway is crowded with the names of Kings, Queens and the Viceroys. Margaret, Queen of Norway, Denmark and Sweden, married the young King and the youngest one. Even after the death of her husband and her son she continued to rule Norway, Sweden and Denmark. At the beginning of the sixteenth century the kings of Denmark gained the ascendency in the North.

A long period of retrogression ensued and the kingdom was in existence until it was ceded in 1814 to Sweden by the king of Denmark who then held the suzerainty. The Norwegians, discontented with this union, rejected it and declared independence. Then came the Swedish Prince Charles Frederick and was made king. But he was opposed by the foreign powers and a German army entered the country. Later on the same year the independence of Norway as an individual kingdom was at an end. The constitution was modified and Charles XIII was elected king of the united monarchy. During the nineteenth century four attempts at separation were made, but the union of Norway and Sweden, as the Diet of that country had no separate vote, was carried under the agreement and in the beginning of the nineteenth century the united kingdom was in the beginning of the nineteenth century the united kingdom was established.

Government. Norway is a limited hereditary monarchy. The legislative power is vested in the Storthing, which was established in 1905 and consists of the Lagthing and the Odelsthing. The former is made up of one fourth of the members of the Storthing and the latter of the remaining three fourths. The two chambers are elected by direct vote and hold office for three years. The King is nominally executive, assisted by a Council of State, made up of a Minister President and not less than seven or more than eleven Ministers. The executive power is vested in the King, who is chief of the executive, but the Council of State, consisting of the Ministry Presiding, who is chief of the Ministry of Finance and of Commerce for Worship and Education, for Justice, Commerce, Navigation and Industry, Agriculture, Defense, Foreign Affairs; and Labor.

Industry and Labor. Agriculture, the leading mining and the fishing industry. In 1904 there were 7,000 steam and sailing ships of over four tons under the Norwegian flag.

Religion. Of the entire population, to the about 35,000 persons belong to the National Church, the Lutheran Confession. The others are members of the Roman Catholic Church, and freely exercise their religion under the laws of the land.

Education. The Territory of Finmarken is attended by over 1,000 students. There are 21 secondary schools, one commercial and 1 normal schools and there are 2 elementary schools and schools for the deaf, the blind and the feeble-minded.

Defenses. Service is universal and compulsory, the army being a national militia in the true sense. Liability to service is at the age of 21 and continues until the age of 50. The active army is at all times the militia of the country and consists of 12,000 men. The navy consists of 10 small ships of the first class, 4 of the second and 10 of the third. The personnel of the fleet is 1,000 men and the militia of the country is supposed to number 100,000 men. All males between the ages of 21 and 25 are enrolled and serve in the first class. Those between the ages of 25 and 32 are enrolled in the second class. All males between the ages of 32 and 50 are enrolled in the third class. In the first class men are required annually to undergo a training of not less than six months.

The area is 124,130 square miles. The population in 1905 was 2,240,864.

1814. Norway is given to Sweden in the treaty of Kiel. Norwegians resistance is put down by overwhelming troops. In November 4, Charles XIII is proclaimed king of the united kingdom.

1814. February 8 Charles XIII, Marshal Bernadotte succeeds on death of Charles XIII.

1821. Norway is abolished.

1844. Oscar I succeeds to the throne of his father Charles XIV.

1847. Oscar I succeeds the throne of his son.

1859. Karl XV succeeds Oscar I. The son is proclaimed on the son, Charles XV.

1872. September 18 Charles XV succeeds his brother Oscar II. crowned.

1888. In July Fridtjof Nansen, leader of a polar expedition on which started in June 24, 1888 and reached the latitude of 86° 14' north, returns in safety to the Fram and reaches the Norwegian coast.

1898. Universal male suffrage adopted.

1901. Parliament confers the franchise on women taxpayers, but 25

1904. January 29 announces a declaration of the powers between Norway.

December 21 Norway, Sweden, and Denmark meet negotiations for a monetary alliance.

1905. June 7, King Oscar vetoes Norway's bill for separate consular service. As a result, on June 7 Norway, through the storthing, declares herself

separated from Sweden. King Oscar protests, and on June 9 declines to nominate a king for Norway. June 22, the Swedish Riksdag refers the government's proposal of settlement with Norway to special committee of both chambers, and on July 19 the joint committee begins work on the bill. August 13, popular vote in Norway is practically unanimous in favor of separation. September 25, the draft of the bill framed by special committee is published in both capitals. October 9, by vote of 101 to 16, the Storthing accepts this bill for the dissolution of the union with Sweden. October 27, the treaty is signed at Stockholm. It provides for a neutral zone between the two countries and the consequent demolition of certain fortresses, freedom of transit traffic from taxation, the safeguarding of certain vested rights in waterways, and reference of disputes to The Hague Tribunal.

November 13, by a large majority of popular vote, Prince Charles of Denmark is elected king, and on November 18 he is unanimously elected by Parliament, and announces that he will take the name of **Haakon VII.** November 27, the King **takes oath** to observe the Norwegian constitution.

1906. June 22, Haakon VII. and Queen Maud are crowned in the cathedral at Trondhjem.

1907. June 14, suffrage is granted to women of qualified classes.

November 2, France, Germany, Great Britain and Russia sign a treaty guaranteeing the integrity of Norway.

1908. June 27, fire destroys the business portion of the city of Fredrikstad.

PANAMA.

From the top of a hill in Panama, Vasco Núñez de Balboa in 1513 had his first view of the Pacific Ocean.

Panama was one of the first Spanish American provinces to revolt against the oppression of Spain. Afterward it became one of the United States of Colombia. The constitution of 1886, a result of the revolution of the preceding year, abolished the sovereignty of the States and reduced them to mere departments under governors appointed by the president of the republic. The Panamans had no redress against this humiliation. Panama, as coinciding practically with the Isthmus, became a chief source of revenue to Colombia in the nineteenth century, especially after the construction of the trans-Isthmian railroad. But from the sums thus flowing into the Colombian treasury, Panama herself derived little benefit. On the undertaking of a trans-Isthmian canal by the French, and later, when the American government was proposing to carry to completion the work the French company had begun, Panama was in a position of immense importance, and, reasserting its sovereign rights, declared itself independent, November 4, 1903. Its independence was recognized by the United States on the 13th of the same month, and soon afterward by the other powers. A treaty was signed on November 18 between the United States and Panama, providing for the construction and control of the inter-Oceanic canal by the former power. Panama granted in perpetuity the use and control of a zone, five miles in width, on each side of the canal route, to the United States, which also was granted jurisdiction in the cities of Panama and Colon and in their harbors as to whatever pertains to quarantine and sanitation. Those cities otherwise were to remain in the possession of Panama. The islands in Panama Bay were ceded, as was the coast line of the canal for such works of defense as may be necessary. On the ratification of the treaty, the United States paid Panama $10,000,000 for these grants; and, after nine years from that time, will make an annual payment of $250,000. The canal is to have a length of 44 miles with a minimum depth of 35 feet. After such thorough sanitation of the whole locality that it has been rendered among the healthiest regions in the world, the American government vigorously undertook the completion of the canal.

Government. By the constitution of 1904, the executive functions are exercised by a president who, as well as two vice presidents, is elected for four years, and the legislative by a chamber of 32 members, meeting biennially. The president is assisted by a cabinet of five ministers.

Industry and Labor. Agriculture, still of a primitive order, is the chief occupation. Bananas, caoutchouc, cacao, and mahogany are produced. All common minerals are found except coal. Under the present favoring conditions, the soil and climate assure a great development.

Religion. Most of the inhabitants are Roman Catholics.

Education. Instruction is in its initial stages. There are some primary schools. Higher schools have been recently opened.

Defense. Panama, being under the virtual protection of the United States, requires an organized service only for police duty.

The area is 33,800 square miles. The population is estimated at 400,000.

1502. Columbus traces the shores of Panama.

1510. **Darien** is **founded** by a Spanish colony.

1513. Núñez de Balboa crosses the Isthmus **and discovers the Pacific Ocean**, the dominion of which he claims for the Spanish crown.

1878. The government of Colombia, under which was the province of Panama, grants to the International Interoceanic Canal Society the exclusive privilege of constructing a ship canal through Colombian territory between the two oceans, the canal itself and the construction ports being neutralized.

1879. M. Ferdinand de Lesseps takes charge of the Panama Canal enterprise. In the course of the two following years active operations on the canal are begun.

1889. For lack of funds work on the canal is suspended. The whole enterprise goes into the hands of a receiver.

1903. November 4, Panama declares its independence, which is speedily recognized by the United States and the other powers.

November 15, a treaty, providing for the construction of the canal, is signed by Panama and the United States.

1904. January 15, Constitutional Convention meets. In February constitution is promulgated. Dr. Manuel Amador Guerrero is elected president. May 4, the Assembly rejects the gold standard by a vote of 16 to 13, but a bill is later passed, and signed by President Amador, June 28, which practically establishes this standard.

In July excitement is caused by a decree establishing United States customhouses in the Canal Zone.

1904. November 18, General Huertas, commander in chief of the army, and leader of an insurgent movement, resigns.

November 28, Panama's contentions regarding the establishment of Dingley tariff rates and sanitary and port control are placed before Secretary Taft in conference at Panama. By decree, December 12, these matters are arranged satisfactorily.

1905. June 19, **postal treaty** with the United States is signed. October 14, the government announces that it will pay only that part of the debt of Colombia which is proportionate to the population of the Isthmus at the time independence was declared, and that only upon condition that Colombia will repay certain sums borrowed from Panama. In the Canal Zone the year is one of preparation rather than accomplishment. Secretary Taft visits the canal in November.

1906. November 16, President Roosevelt visits the city of Panama and is greeted by President Amador.

1907. January 10, Panama announces ratification of treaty settling dispute as to Costa Rican boundary.

1908. May 16, the Panaman government requests the American government to appoint a commissioner to insure fairness in the approaching election.

July 12, José Domingo Obaldia is elected president.

December 12, a premature explosion of dynamite at Bas Obispo in the Canal Zone kills eleven men and wounds fifty.

PARAGUAY.

Until Bolivia lost her coast line to Chile, Paraguay was the only South American state not touching the ocean. Its chief city, Asunción, was founded by Ayolas in the fall of 1536. After the abandonment of Buenos Aires by the Spaniards, Asunción became the capital of the whole region of the Plata. The native races of this part of South America were the Guaranis, whom the whites first conciliated, then subjected, and with whom they intermarried. The modern Paraguayans are the descendants of this relationship. Paraguay was a dependency of Buenos Aires, when, in 1811, it rose against the Spanish authorities and defeated the Spanish general Belgrano. The consulate, established in 1812, was supplanted two years later by the dictatorship of General Francia, who held undisputed sway until 1840. A second brief consulate was succeeded by the presidency of Don Carlos López. After him his son Don Francisco López ruled from 1862 for seven years over what was called the Republic of Paraguay. His insensate egotism involved the Republic in desperate and ruinous wars with the neighboring states. In 1855 by a blunder a Paraguayan fort fired upon the American ship *Water Witch* in the Plata. On war being threatened by the American government, Paraguay made reparation. After the battle of Aquidabán in 1870, when López was defeated and slain, Paraguay had an uneventful existence until the bloody revolution of 1908.

Government. Industry and Labor. Religion. Education. Defense. In these respects the Republic is, on a small scale, similar to the other South American states: a President, Cabinet, and two Houses; agriculture for the occupation; the Roman Catholic faith as the state religion; primary education, free and universal but not compulsory; an army of about 1,000 men.

The area is about 98,000 square miles. The population in 1857 was 1,337,431, but in 1905 was 631,347.

1535. Conquered by Alvar Núñez Cabeza de Vaca.

1608. Missions are established by the Jesuits, who dominate the country for 160 years.

1768. The Jesuits are expelled.

1811. Revolt against Spain.

1814–1840. Dr. Francia exercises a wise dictatorship.

1862. Carlos López, president since 1844, is succeeded by his son, Francisco López.

1864–1870. Paraguay engages in disastrous wars with Brazil and the Argentine Republic.

1870. April 1, at the **battle of Aquidabán** Paraguay is crushed, and López killed.

1908. June 30, fierce revolution at Asunción. More than 400 persons are killed in the streets. Dr. Emiliano G. Naveiro is proclaimed president.

PERSIA.

Few existing powers have a more remote date for their origin than has Persia. Such is the antiquity of this state that its beginning is lost in myth and tradition. Ancient history takes note of *Iran* as one of the earliest seats of civilization. Following the old empire of Bactria came that of the Medo-Persians. Under the Achæmenian kings Persia was a conquering power the dominion of which was extended westward to Greece, eastward to the Indus, southward to Ethiopia, and northward to the countries above the Caspian.

The Persians made successful war with almost every kingdom upon their borders, until Alexander the Macedonian turned the tide of conquest upon the conquerors. The brief Greek ascendency was succeeded by the dynasty of the Seleucidæ, and that by the Parthian Empire. Passing by the epoch of the Roman ascendency, including the conquest of Persia by Trajan and the subsequent campaigns of Severus, we come to the Sassanian Empire, extending from the third century to the period of the Mussulman conquest. Under the Abbasside caliphs, Persia again became a great empire, the transformation of which into Modern Persia may be dated from the death of Abbas III., in the year 1736.

At that time, the ambitious Nadir, powerful in war and intrigue, threw off his mask and became shah. He was by nature and policy a conqueror. His invasion of India followed hard after his accession to the throne. His northern conquests and wars in the west justified his reputation as one of the greatest of the shahs. In 1747, he was assassinated, and his death was followed by a period of anarchy. Next came the reigns of Hadil Shah and Rukh Shah, at which period the government became more and more an intrigue of rivals amid a setting of assassinations.

The history of Persia during the latter half of the eighteenth century is largely an account of feuds and revolutions, which, being the usual concomitants of personal government, affected but little the general course of events. The Kajar dynasty was established with the accession of Murad in 1782. In the following year a campaign was made against Georgia. Afterwards there

was a revolution in Khorassan. Meanwhile the warlike Agha Mohammed carried the shah's standard in triumph into that province and also into Afghanistan. Mohammed was murdered in 1797, and other rebellions followed his death. Fath Ali Shah was proclaimed in 1798; then followed the war with Russia, by which event diplomatic relations were established between Persia and England, and also between Persia and France. Napoleon I. cultivated friendly relations with the shah; for the latter was hostile to the czar.

Persia, however, has never entered into the European system; and the Western States have not much concerned themselves with the course of Persian events. Fath Ali Shah died in 1834 and was succeeded by Mohammed Shah. Already the Afghan question had become more important to the empire than was the troubled relation with Russia. Soon after his accession, Mohammed sent his army against Herat to reduce the chiefs of that territory to submission. In 1837, the city of Herat was besieged, but the British government finally interfered, and thus the Eastern question declared itself, and the expulsion of the Persians from their fortifications before Herat was effected.

In 1848 Mohammed Shah died and was succeeded by his son, Nasr-ed-Din Shah. Soon afterwards, while England was engaged in the Crimean War, Persia entered into secret relations with Russia, and it was only after the treaty of peace that friendly relations were again declared between the Shah and the Western governments.

Great Britain in the nineteenth century adopted the policy of maintaining an envoy at the Persian court. In 1862 the Anglo-Indian telegraph was carried through Persia from London by way of Teheran and Bagdad. In 1873 and again 1878, the Shah visited London and other Western cities, where he was received with great distinction. In 1881, the international boundary between Persia and Russia was established in a peaceable manner. The reign of Nasr-ed-Din was long and prosperous — according to Asiatic standards. He held the throne for forty-eight years, and was then, in 1896, assassinated by a fanatic. The Persian rule passed without controversy to his son Muzaffar-ed-Din, fifth sovereign of the Kajar dynasty. He speedily squandered the immense sums left by his father and oppressed his people to obtain more. During his reign Great Britain and Russia arrived at amicable agreement regarding Persian affairs. In October, 1906, he issued an ordinance convening a National Council to draw up a Constitution. Dying in January, 1907, he was succeeded by his son, Mohammed Ali Mirza Shah.

Government. A Constitution was signed by the Shah late in 1906. It provided for a National Congress to consist of a Senate of 60, and of a Council or Lower House of 156 members. General elections were indicated for every second year. The practical outcome is a problem. It is as yet undetermined whether constitutional and responsible government can be compatible with the fundamental doctrines of the Mussulman faith. The principles of Persian government up to the present have been derived from the Koran. The Shah has been revered as representative and vice regent of the Prophet, combining in himself all legislative and executive authority. The monarchy has been absolute, except as restrained by vague fear of revolution. For his convenience he is assisted by a Grand Vizier and by a varying number of subordinate ministers.

Religion. All the people of Persia, with the exception of about 100,000, are Mussulmans, ten elevenths of whom are Shiite and the other eleventh Sunnite. The Shiites are regarded as heterodox as they exalt the Kaliph Ali to equality with, or even superiority to, the Prophet Mohammed. There are a few thousand Parsees or followers of Zoroaster, some thousand Christians of ancient communions, and as many Jews.

Education. The main instruction is in the Koran, which some are taught to read and many memorize in part. Mosque schools are almost as numerous as the mosques. Well-to-do families employ private tutors. There is a polytechnic school at Teheran, and there are military colleges at Teheran and Tabriz; also a "political college" with 30 students to fit for service abroad.

Industry and Labor. Persia has been immemorially regarded as one of the favored regions of the earth. The productions range from those of the north temperate zone to those of the tropics. Vegetation in many parts of the country is luxuriant and strong. Next to Arabia, Persia leads in the production of the medicinal gums. The leaves of plants are redolent, and the blossoms among the richest to be seen anywhere in the world.

Persia is regarded as the native home of the apple, the pear, and the quince. All the cereal grains and the common fruits are produced in abundance. The annual yield of silk is great. One of the leading industries is the production of tobacco. Handmade carpets and all manner of tapestries attest the skill and patience of the Persian artisans. Carpets to the value of $3,000,000 were exported in 1906. The condition of the Persian laborer may be compared to that of the Turk. The industrial life is evenly balanced between manufactures and the primary pursuits of agriculture and fruit raising.

Defense. The Persian army hardly deserves the name, except so far as a few regiments have been drilled by Russian officers On the pay roll it numbers 130,000 men and there are 50,000 or 60,000 irregular troops. But the whole are poorly armed, mostly without training or organization, and badly officered. There are eight vessels in the navy, mostly old vessels of small size, patched up and sold by Europeans for custom service.

The area is 628,000 square miles. The population is supposed to be about 9,500,000.

1721. A large **army of Afghans invades Persia** and seizes Karaman. A great battle is fought near Ispahan in which the Persians are disastrously routed, March 8.

1729. The **Afghans are defeated and expelled** from the country by **Nadir**, the Persian conqueror.

1736. Nadir is proclaimed emperor in the plains of Moghan with the title of **Nadir Shah.**

1738. Nadir Shah leads a large army into Afghanistan, besieges Kabul, carries the place, and slaughters the garrison, thus opening the route to India through the Khaibar Pass. He makes **great conquests in India**, and gets the name of the Cæsar of the East.

1747. Nadir Shah is assassinated by Salah Bey, a captain of his guard.

1760. Karim Khan, one of three rivals, obtains the throne as regent, ruling all Persia, except Khorassan, from Shiraz as his capital.

1779. Karim Khan dies and a **period of anarchy** ensues, which is terminated by the accession of Ali Murad.

1783. Georgia revolts and attaches itself to Russia.

1796. Teheran is made the capital of the Persian Empire.

1828. Fath Ali Shah undertakes **a war against Russia.** (See RUSSIA.)

1828. The peace of Turkmenchai is concluded, by which **Persian Armenia** is acquired by the **czar.**

1834. Fath Ali dies and is succeeded on the Persian throne by Mohammed Shah, his grandson.

1848. Nasr-ed-Din, fourth of the dynasty of Kajar, succeeds **his father** Mohammed.

1856. On October 25, the Persians conquer Herat; as a result **England declares war,** November 1. In the following year General Outram overcomes the army of Persia at Kushab, February 8, and at Mohammera, March 26, after which a peace is concluded at Teheran, April 14; Herat is relinquished by Persia, in July.

1858. The Shah reorganizes the government of his dominions.

1871. Persia suffers from the effect of a three years' drought and a visitation of cholera.

1873. The shah, Nasr-ed-Din, visits Europe; in 1878, he makes a second tour of the Western kingdoms.

1880. The **Kurds rebel** and make a campaign, but are overcome after **a** sanguinary conflict.

1881. The international boundary of Persia and Russia is established.

1884. An attempt of **Russia** to secure a modification of the Persian frontier and thus gain a territory on the eastern edge of Iran is **successfully resisted** by the Shah.

1885. The **Russian aggressions** on the Afghan frontier **continue; Persia** is obliged to concede the military posts on the Herirud.

1888. In May, a measure of legal reform is declared in an edict by the Shah, promising equal justice and protection against extortion to all the people. The relations of Russia and England on the Afghan frontier become strained. The Shah grants to **foreign governments** the right of **organizing commercial companies** in Persia and of interfering for their protection.

1889. The Shah grants the right of establishing a national bank with power to issue notes not exceeding in the aggregate $4,000,000.

1891. Foreign corporations begin to influence the **internal affairs** of the empire. The Oriental Bank of London secures the exclusive privilege of working the Persian mines. The Imperial Tobacco Corporation goes into operation in February. Great native prejudice is excited against these foreign institutions.

1892. Numerous **riots** break out in antagonism to the **tobacco monopoly.** The priests inhibit the use of tobacco, and the Shah is induced to issue an edict abolishing the monopoly. A reaction occurs, however, and the Shah revokes the order; the government agrees to pay the Imperial Tobacco Corporation an indemnity of $2,000,000.

1893. A serious **famine** occurs in the province of Fars. The starving people break into insurrection and plunder the depots of supply; the disturbances are put down by the army.

1896. The **Shah is shot** at Teheran by a mullah assassin disguised **as a** woman, May 1. He is succeeded by his son Muzaffar-ed-Din.

1902. January 22, it is officially announced that **Great Britain intends to preserve her ascendency in the Persian Gulf.** During the year the shah, Muzaffar-ed-Din, takes an extended tour through Europe. In November an **embassy is sent to Greece,** the first since 491 B. C.

1903. A new customs tariff favorable to Russia is framed. In May it **is** rumored that a treaty exists with Russia agreeing that no railway shall be built in Persia except by Russians for ten years subsequent to the accession of the present shah.

May 5, Lord Lansdowne, British secretary of foreign affairs, declares that Great Britain would consider the establishment of a naval base of another country on the Persian Gulf as a grave menace to her interests, and would resist it with all the means in her power. The finances of the country and much of the export and import trade are in Russian hands.

1905. April 19, long-standing boundary dispute between Persia and Afghanistan is settled by award of the British Commission, virtually sustaining the Persian contention.

1906. January 22, the Shah announces his intention to promulgate a constitution, a great protest against existing conditions having been made by the mullahs, or priests, and representative merchants.

December 30, **constitution is signed** by the Shah and Crown Prince. It provides for Senate and National Assembly.

1907. January 8, the Shah dies, and on January 19 **Mohammed Ali Mirza,** his son, is acknowledged as shah at Teheran.

February 10, the Assembly demands of the Shah that he admit formally that he is a constitutional monarch. On Feb. 11 he makes such admission.

1908. April 16, Russian Cossacks cross the frontier in reprisal for Kurdish depredations in Russian Armenia.

June 23, the **troops of the Shah storm the parliament building** to arrest certain members. Several hundred persons are killed and injured and rioting and looting continue for several days. Some political refugees escape to the British legation at Teheran, whom on June 30 the British minister refuses to surrender. November 26, the Shah revokes his promise to grant a constitution and convene parliament. November 28, at the suggestion of the British and Russian ministers this proclamation is revoked.

1909. February 18, severe earthquake shocks destroy 50 villages.

February 3, **rebels seize Ispahan** after fierce rioting. The rebellion spreads and there are conflicts at many points, notably Tabriz, between the rebels and the Shah's troops. Both sides commit atrocities. March 22, Great Britain and Russia jointly demand of the Shah that outrages by the troops be stopped. April 30, Russian forces enter Tabriz to preserve order. May 9, the Shah issues a decree granting political amnesty.

On July 16, after weeks of insurrection and riot, the Shah is dethroned at Teheran by the revolutionary Nationalist forces. The twelve-year-old crown prince, Ahmed Mirza, is proclaimed shah, with Azad-el-Mulk as regent. November 15, parliament is opened by the Shah at Teheran.

PERU.

THE history of Peru is a mingled romance and tragedy. In its highlands, extending into Bolivia, a strong civilization already flourished when the heptarchy of the Anglo-Saxons was still in its infancy. Arts and sciences were known and practiced at Titicaca and Cuzco, before the Arabian prophet fled from Mecca. The ancient empire of the Piruas was overthrown about the time when the Norsemen first reached the shores of New England; but two centuries and a half elapsed before the empire of the Incas was established at Cuzco. From 1230, to the date of the discovery of America by Columbus, that empire flourished and rose to the first rank among the native states of South America. It was rivaled in North America only by the empire of the Montezumas.

Just before the Spanish conquest of Peru, the reigning Inca dynasty was weakened by a contested succession. A civil war was waged between Huascar and Atahualpa, the two sons of the renowned Huayna Capac, when the invasion under Pizarro was undertaken. The Spanish conqueror came in the wake of this war, just after Atahualpa had triumphed over his brother. In 1527, Pizarro entered Peru. The conquest was undertaken and completed in 1532. Atahualpa was captured and killed. The countries round about were invaded and conquered. Quito (the modern Ecuador), part of New Granada, Charcas (the modern Bolivia), and northern Chile, were taken in succession. In 1535, Pizarro founded Lima and made it his capital. The natives, seeing that destruction was impending, rose in rebellion, but as often as they revolted, they were quelled and decimated. The Spaniards in this conquest were excited beyond measure by the fabulous riches of the silver mines, more than fourteen hundred of which were then open to their ravages. The invaders enriched themselves and filled the home treasury of Spain with the burden of silver which they extorted under the lash from the cowering natives. For a while, the viceroyalty of Peru held under its dominion the whole of Spanish South America. Not until the first quarter of the eighteenth century was this really imperial, but viceregal, power broken up by the separation of its parts. The first secession was that of New Granada, which occurred in 1718. The next important division was the separation of La Plata, which was effected in 1776. The viceroyalty of Peru was thus reduced to Peru proper, Chile and Quito — and even the latter two were not wholly subordinate.

In the year 1780, the Indian natives, always numerous, but as a rule not formidable to the Spanish ascendency, rose in rebellion under their hero, Tupac Amaru. The insurgents, however, were not able to hold their own against the powerful soldiery, and their suppression left them in worse condition than before.

The effects of the downfall of the Spanish Bourbons were not immediately felt in Peru and her dependencies. The Atlantic and maritime states of South America were first to gain their independence. The Napoleonic *régime* ended in Europe, and Napoleon himself died at Longwood, before independence was declared by Peru. The forces of the viceroy faced the rebellion with great energy, and more than three years elapsed before the battle of Ayacucho was fought and won by the popular party, by which victory the Spanish rule not only in Peru but in all South America was ended. Callao, the last Spanish port in South America, was evacuated in 1826. In the meantime, Quito and Chile had seceded and become independent. Simon Bolivar had led the revolution to success in a large part of the continent. Santa Cruz, who came afterwards, invaded Peru from Bolivia in 1835, and the two countries were united under his authority. The union, however, was only maintained for two years, when Gamarra led a counter movement against Bolivia, by which the two countries were separated. It was only after 1845 that order was restored in Peru, but in that country, as in the other incipient republics, the people divided into factions, and presidents were made and deposed at will. These perpetual broils extended to the year 1868, when President Prado was deposed from office.

In the meantime Spain, still cherishing her claims, sent a fleet to enforce them against Peru, but the armament of the latter country was sufficient for the emergency. The Spanish flotilla was defeated at the harbor of Callao in 1866, and the mother country was forced to abandon her pretensions. In the two years following this event, a speculative mania seized the Peruvians, and they undertook to rival North America in the production of public works. The malady spread until the year 1876, when the crisis came, and general bankruptcy ensued. The attempts of the people to restore prosperity were thwarted by the outbreak of the war with Chile. It was at this juncture that the outlet of the country by way of western Bolivia and southern Peru was claimed by Chile, and the claim was successfully enforced by arms. In 1881, Lima was captured and ravaged by the Chileans. The country was obliged to sue for peace. Large territorial cessions were made, and the better part of the saltpeter mines and the guano beds was given up to the victors. Lima was evacuated by the Chileans in 1883. There was a disputed presidency which terminated in the election of Cácares in 1885. Peru has not recovered from the war with Chile. Nor does it show marked signs of improvement.

Government; Defense. The Constitution, adopted in 1856, was revised in 1860. The President and two Vice Presidents, the 51 Senators and 116 Deputies are elected by direct vote. The presidential term is four years. The army, now made up of 4,000 men, is being reorganized by French officers. The navy of six vessels is, with the exception of one cruiser launched in 1906, a negligible quantity.

Religion; Education. By the constitution, Roman Catholicism is the established religion, and all other forms of worship are prohibited from public exercise; but in practice there is some degree of toleration. Elementary education is in theory compulsory, and is in some measure provided for by municipal schools. The general government maintains high schools in the capitals of departments. The university at Lima is the most ancient in America, its charter having been given by Philip II. in 1572; the institution is supplemented by a modern school of mines and civil engineering.

Industry and Labor. The chief productions are cotton, coffee and sugar. The coffee culture, under the management of a corporation, is leading to a considerable development of the country by roads and bridges. The same Peruvian corporation has the control of the guano deposits. The gold mines have almost ceased to be profitable. The yield of petroleum is great and increasing. There has been no census since 1876, when only 13.8 per cent of the inhabitants were white, 57.6 per cent were Indian and the remainder mixed.

The area is 695,733 square miles. By last census in 1876 there were 2,660,881 inhabitants. According to the Peruvian government there are now less than 3,000,000. According to the Lima Geographical Society in 1896 there were 4,609,999.

1527–1533. Conquest of Peru undertaken and accomplished by Francisco Pizarro and Diego de Almagro.
1533. August 29, the Inca, **Atahualpa, is treacherously murdered** by order of Pizarro.
1541. June 26, **Pizarro is assassinated** at Lima.
1718. New Granada separates from Peru.
1776. La Plata separates from Peru.
1780–1783. Tupac Amaru, a descendant of the Incas, heads a formidable rebellion of the natives.
1821. July 28, San Martin proclaims the **independence of Peru.**
1824. Bolivar is made dictator. The Peruvians win the decisive battle of Ayacucho over the Spaniards.
1828. March 21, the **new Peruvian constitution** goes into effect.
1855. General Ramon Castilla elected president.
1864. April 14, the Spaniards seize the Chincha islands, valuable for guano, intending to hold them until the claims of Spain against Peru are satisfied. In November plenipotentiaries from Chile and other states meet at Lisbon to plan concerted defense against Spain.
1865. January 28, peace with Spain is secured; Chincha islands restored, February 3. In October Peruvian revolutionists declare war against Spain and capture Lima.
1866. May 2, the Spanish admiral Nuñez bombards Callao, is wounded and repulsed. On May 19 Spaniards quit Peruvian waters.
1867. August 31, after riots and civil war Mariano-Ignacio Prado is proclaimed president and a **new constitution** goes into effect.
1868. August 2, Colonel José Balta is elected president and encourages mad extravagance.
1872. July 26, President Balta assassinated. August 2, Don Manuel Pardo constitutional president, the first civilian elected chief magistrate.
1876. General Mariano-Ignacio Prado succeeds.
1879–1884. Disastrous war with Chile.
1895. After fourteen months of civil war, 1,500 persons being slain in the streets of Lima, Pierola is peaceably elected president.
1908. May 8, attempt at revolution suppressed by the troops.
July 28, Peru and Bolivia agree to arbitrate their boundary dispute.
September 24, Augusto B. Leguia is inaugurated president.
1909. War threatens with Bolivia but is averted. See ARGENTINA.

PORTUGAL.

THOUGH in one sense one of the oldest states of Europe, Portugal, the *Portus Gallorum* of the Romans, in another sense is a recent political development. Under the Roman Empire the country, then occupied by the Gallic nations, was called Lusitania. Afterwards it was a Visigothic dependency. In the eleventh century, Portugal was under the dominion of the Dukes of Burgundy. Of these the most powerful was John the Great, whose reign extended from 1385 to 1433.

This may be regarded as the Golden Age of Portuguese history. It was at this epoch that the adventurous Portuguese navigators made their courageous excursions into hitherto unknown seas and regions. Under Prince Henry, son of John the Great, they went forth on world-wide voyages. Before the close of the fifteenth century, one of the number, Vasco da Gama, doubled the south Cape of Africa and reached the Indies.

The outreachings of seafaring and colonial enterprise and enlightenment continued during the reign of Emanuel the Fortunate (1495–1521). Now it was that the Portuguese empire was founded in the East, including the farther coast of Africa and the southwestern shores of Asia. While Columbus was still voyaging with only half success in the West Indies, Brazil was discovered; the influence of Portugal was felt from the tributaries of the Amazon to the valley of the Indus.

In 1583 Philip II. forced Portugal to recognize his authority and for nearly sixty years Portugal was a Spanish dependency. The rule of the Spanish kings bore heavily upon the Portuguese, and at last, in 1640, they rose in revolt. The Duke of Bragança was proclaimed king with the title of John IV.

It was while this resolute prince was contending with the Spaniards for the independence of his country that the wars of the Reformation were brought to a close and the peace of all Europe north of the Pyrenees was declared by the Peace of Westphalia. After this event the struggle for Portuguese independence continued for seventeen years, the contest being ended in 1665 by the battle of Montesclaros, in which the Spaniards were so disastrously defeated that they gave over the contest. During all of the seventeenth century, however, the Spanish Bourbons pursued an inimical policy towards Portugal, and it was only in 1737 that the long-cherished hope of reëstablishing the Spanish ascendency was abandoned. At this time the reigning sovereign was John V., whose high character and influence were recognized throughout Europe.

Meanwhile the maritime exploits of the Portuguese had reacted upon the national intellect. An age of literature and art had supervened. Lisbon in the sixteenth century was one of the intellectual centers of Europe. Poets, historians, and philosophers abounded.

In 1750, Joseph I. succeeded his father, John V., on the Portuguese throne. During his reign, disaster followed disaster, as though the kingdom had passed under an evil star. Five years after the accession of Joseph came the Lisbon earthquake, by which one half of the capital city was destroyed. The energy of the king and of Pombal, his great Prime Minister, triumphed in a measure over the assault of Nature on his kingdom. Many reforms were instituted, and before the end of his reign, in 1777, the country had revived.

From this date followed the reign of Joseph's daughter, the unfortunate Maria, who, becoming insane in 1792, was dependent upon her son, the Prince of Brazil, who acted as regent during the last twenty-four years of her life. This was the epoch of the Napoleonic wars. Napoleon held relations with the regent and his government, until, breaking with them, he issued the edict in which it was declared that the House of Bragança had ceased to reign. Marshal Junot had meanwhile invaded Portugal with a French army and conquered the kingdom. The Bragança family fled in 1807 to Brazil, and for nearly fifteen years remained in Rio Janeiro.

In the meantime a British ascendency had followed the French at Lisbon. Finally, in 1821, a new constitution was prepared; the exiled family returned, and John VI. was restored. His son Dom Pedro remained behind, first, as prince regent, and afterwards, as emperor of Brazil.

Five years after the restoration, John VI. died, and by this event Dom Pedro of Brazil might have become king of Portugal; but he chose to send his daughter Maria in his stead. With her came also Dom Miguel, the younger brother of Dom Pedro, to act as regent. Taking advantage of his opportunity he usurped the throne, trampled on the constitution, oppressed his subjects, and continued in an arbitrary career until obliged by foreign intervention to abdicate.

The subsequent history of Portugal furnishes several examples of revolution and counter-revolution, with frequent appeal to foreign powers in behalf of the contestants. An instance of this kind occurred in 1846. Subsequently, the popular leader, Saldanha, was enabled to enforce certain reforms in the government, and to oblige the government to substitute popular for unpopular ministers. In November of 1853 the queen, Maria II., died, and was succeeded by her son, Pedro V., who reigned about eight years. Then came Luiz I., who held the throne until 1889. It was during his reign that the city of Lisbon was almost destroyed by a conflagration. He was succeeded by his son, Carlos I., who reigned until February, 1908. Then he, with the Crown Prince, was assassinated while driving through the streets. His second son, Manuel II., who was seriously wounded at the same time, is now reigning.

Government. The present constitution of Portugal dates from the year 1826. At that time the "Constitutional Charter" was granted by the sovereign, Pedro IV. This instrument was altered and amended in 1882, 1885, and 1895. In accordance with the terms of the constitution the government is defined a hereditary monarchy. The Salic law is abrogated except that the male heir to the throne has the *preference* over the female.

In addition to the usual threefold division of government into Legislative, Executive, and Judicial, there is in the Portuguese system a fourth power called the "Moderating" authority, and this function rests with the sovereign. The legislative body consists of two chambers: the House of Peers, and the House of Deputies. Until 1885 the Peerage had been in part hereditary, but in that year the hereditary right was abolished. The House of Peers is composed of 90 members. The House of Deputies is composed of representatives of the people, 148 in number, chosen by electors, but with property qualifications. There are also 7 deputies for the colonies.

The executive is assisted in the administration of the government by a ministry of seven members. These are as follows: Minister of the Interior; Foreign Affairs; Finance; Justice and Worship; War; Minister of Marine and Colonies; Public Works, Industry, and Commerce.

Industry and Labor. The industries of Portugal are almost identical with those of Spain. On the whole the methods of production are less advanced than in the major kingdom. Agriculture lags; few improvements have been introduced, and enterprise has been impeded by the system of land-ownership. The greater part of the lands were long held by the king, nobles, and clergy. Only in recent years has free ownership become the right of the people. The Portuguese lands are held in four manners: first, by proprietorship; second, by tenant farming; third, by *métayage* (working on shares); and fourth, by *emphyteusis* (perpetual right without ownership). The agricultural productions and the manufactures are of like character with the products of Spain.

Religion. The national religion is the Roman Catholic. All other forms of faith and practice are tolerated. The church of Portugal is under the immediate control of the Patriarch of Lisbon, with two archbishops and fourteen bishops. The Patriarch must be a cardinal. The country has relatively a larger number of monasteries and nunneries than has Spain. The people are virtually a unit in their adherence to the Mother Church. The Protestant population consists mostly of foreigners and sojourners in Lisbon.

Education. The educational system of the kingdom is directed by a superintendent of instruction, who is an underofficer in the department of the Minister of the Interior. The system of primary education is provided for by the public and is free to all. The law is compulsory, but the statute is either very imperfectly enforced or wholly disregarded. In 1900 over seventy-eight per cent of the people could not read. The chief institution of higher learning is the University of Coimbra, which was founded before the close of the thirteenth century. At Lisbon there are a military college and a naval school. There is also a respectable number of professional, technical, and high schools; but nearly all of these institutions are still pervaded with the scholastic spirit and formalism of the Middle Ages.

Defense. The only large fortified cities in Portugal are Lisbon and Elvas. Only the capital has been protected by well-constructed modern works. The Portuguese army is organized under the statute of 1901. It is raised by conscription and exemption is easy. The standing army is fixed at 30,000 men with 2,800 officers. In addition there is the Colonial Force of about 13,000, nearly a fourth of whom are Europeans. The navy comprises: 1 royal yacht, 1 armored and 5 protected cruisers, 1 corvette, 34 gunboats of various kinds and a number of less important vessels.

The area is 34,254 square miles. The population in 1900 was 5,423,132.

1650. **The war with Spain** for the recovery of the independence of Portugal is carried on by John IV.
1662. Catherine of Bragança is espoused by Charles II. of England.
1668. Spain is forced to recognize in the treaty of Lisbon the **independence of Portugal** from Spanish dominion.
1713. Portugal, after participating in the war of the Spanish succession, becomes a signatory of the treaty of Utrecht, April 11.
1755. On November 1, the notable **earthquake** almost completely **destroys Lisbon.**
1758. Assassins attempt to kill King Joseph I., whereupon the sovereign inflicts great severities on many of his nobles.
1759. The Jesuits are expelled from Portugal.
1762. A force of Spaniards with French allies invades Portugal, but the English interfere and a treaty is signed at Fontainebleau, November 3, by Spain, France, Great Britain, and Portugal.
1807. Marshal Junot leads the French in an **invasion of Portugal** (see FRANCE), in November, and the royal family sets sail for Brazil; Lisbon is occupied by the French army.
1814. Portugal cedes **Guiana** to France. In the following year **Brazil** is united to Portugal.
1820. A revolution breaks out in Oporto and a constitutional *junta* is established. In 1821 John VI. and his court return from Brazil, and the king makes modifications in the constitution.
1821. **Brazil becomes independent** under the regency of Dom Pedro, who in the following year is **crowned emperor,** December 1.
1826. **John VI.** of Portugal dies and is succeeded by his son, **Pedro I.** of Brazil, who abdicates the Portuguese throne in favor of his daughter, **Maria da Gloria.**
1828. **Dom Miguel,** the regent, usurps the throne. Portugal calls on England for aid, and British troops are sent against the usurper.
1834. A treaty is signed by England, France, Spain, and Portugal, in opposition to Dom Miguel, in April, and in May the regent makes his submission, Maria da Gloria being declared of age in September.
Dom Pedro, the "Soldier King," dies, September 24.
1846. Another revolution, fomented by the Liberals, disturbs the country; the Queen calls for aid. The troops of Spain enforce a temporary peace, but on their withdrawal the conflict breaks out anew.
1851. The insurrectionists under the leadership of **Saldanha** force the queen, Maria II., to dismiss her minister, Costa Cabral; Saldanha himself becomes the administrator of the government.
1853. **Maria II. dies** on November 15; she is succeeded by her son, **Pedro V.,** with the prince consort as regent.
1861. On November 11, **Pedro V. dies,** and he is succeeded by his brother, the Duke of Oporto, as **Luiz I.**
1870. Saldanha leads a military insurrection, seizes the palace, and forms a ministry, but is overthrown in the same year.
1872. A fire destroys a great part of Lisbon. A conspiracy is discovered in the army and many officers are arrested and punished.
1889. **Luiz I. dies** on October 19, and is succeeded by his son, **Carlos.** In this year the Portuguese in South Africa become involved in disputes with the British authorities.
1890. Portugal yields to England's demands. (See GREAT BRITAIN.)
1892. The failure of the Royal Portuguese Railroad to pay the interest on its bonds precipitates a **financial crisis,** involving the overthrow of the ministry and a series of commercial troubles extending through several years.
1896. Serious **rebellions** break out in the Portuguese **colonies.** The insurrections in East Africa and in Goa and Timor in Asia require strong detachments of the army for their suppression.
1907. May 12, the King dissolves the Cortes, Premier Franco thereafter acting without reference to any representative assembly. Great dissatisfaction ensues, and during the remainder of the year there are riots and other disorders more or less acute throughout the kingdom.
1908. February 1, **King Carlos I.** and the Prince Royal, Luiz Filippe, while driving in Lisbon, are shot and **killed** by political assassins. On February 2 the surviving prince is proclaimed king as Manuel II. Premier Franco resigns and a generally liberal ministry is formed.
1909. Plot to dethrone Manuel II. is discovered January 7.
On April 7 Sebastião Telles, as premier, forms a new cabinet.
December 22, **Senhor Beirão,** as premier, heads a new liberal Ministry.

PORTUGUESE DEPENDENCIES.

PORTUGAL has a number of dependencies with a total area of 802,952 square miles and a population of about 9,000,000. These dependencies are in general regarded as on the same political footing as the mother country and are represented in the House of Deputies.

The Cape Verde Islands, area 1,480 square miles and population 147,424; **Guinea,** area 13,940 square miles and population 820,000; **Angola** and **East Africa,** immense tracts including 778,200 square miles, together with the insignificant islands of **St. Thomas** and **Prince,** are the Portuguese possessions in Africa.

Goa, in India, captured by Albuquerque in 1510, was the capital of Portuguese dominions in the East. Once a magnificent city, it is now in decay with less than 2,000 inhabitants. Here was buried St. Francis Xavier.

Macao, on an island at the mouth of the Canton River, was settled by the Portuguese in the sixteenth century. Once the entrepôt for East-Asiatic commerce, it has declined since the British acquired Hongkong.

Timor, the eastern half of an island in the Malay Archipelago, is now of little importance.

ROUMANIA.

THE modern kingdom of ROUMANIA comprises the former principalities of Wallachia and Moldavia. It also includes the territory of Dobrogea (Dobruja), ceded by Turkey at the Congress of Berlin in 1878. The country lies between the Carpathians, the Pruth, the Black Sea and the Danube. Ethnically the population is made up of the descendants of Wallachians who were of Latin, and of Moldavians who were of Slavic, stock. The country was colonized by Roman soldiers early in the Christian era and the name Roumania is derived from the Roumani or Roumeni, their descendants. The Latin element is still marked in the modern Roumanian.

Wallachian history includes during the Middle Ages the founding of the Wallachian State by Radul Negru in 1290; the Hungarian supremacy in the first half of the fourteenth century; the epoch of Mircea from 1383 to 1419; the reign of Wlad IV., who ascended the throne in 1456, and the subsequent Turkish oppression; the brief ascendency of Michael the Brave, and the conquest of Transylvania; the era of Mathias Bessaraba while the wars of the reformation were ending in Western Europe; the reign of Constantine Brancovan, and the resubjection of the country by the Ottomans to a condition of vassalage.

The real beginning of Moldavian history was the reign of Stephen the Great, which lasted from 1458 to 1504. Then the country became tributary to the Turks, and afterward for more than two centuries Moldavia passed through vicissitudes like those of Wallachia. In the first quarter of the nineteenth century the Moldavians sympathized warmly with the Greek revolution, and insurrections against the Turk were the order of the day. The Treaty of Adrianople pacified the country.

The revolutionary movement of 1848 in Western Europe was felt in both provinces. During the Crimean war the country was occupied, first by Russia and then by Austria-Hungary. At the Treaty of Paris in 1856 the Porte conceded independence in all local affairs. In 1861, despite the disapproval of Europe, the union of the two principalities was accomplished. Several years afterward the arbitrary ruler, Prince Couza, was forced to abdicate and Charles of Hohenzollern was proclaimed Prince of the Roumanians. He ascended the throne as King Carol I.

On the outbreak of the Russo-Turkish war in 1877, Roumania joined Russia and took a distinguished and successful part in the military operations. By the treaties of San Stefano and Berlin, the territory south of the Danube, taken from Russia by the Treaty of Paris in 1856, was retroceded to that power and Roumania acquired the Dobrogea, about 4,000 square miles in extent, on the south side of the Danube. Since independence was achieved, Roumania has steadily developed and progressed.

Government. Roumania is a hereditary monarchy under a Constitution, adopted by a Constituent Assembly in 1866 and modified in 1879 and 1884. There is a Senate of 120 members, elected for eight years, and a House of Deputies of 183 members, elected for four years. While all male adults are voters, they are so classed in Electoral Colleges that the weight of a vote depends largely on property qualification. In 1905 there were 93,622 electors qualified to vote for Deputies but only 24,571 qualified to vote for Senators. The executive power is not vested in the king but in a Council of eight ministers.

Industry and Labor. Seven tenths of the Roumanians are engaged in agriculture. The chief products are maize, wheat, barley, oats and rye.

The cultivable land is very unevenly distributed, one two hundred and fiftieth of the proprietors owning about one half. The country is rich in forests and minerals.

Religion. Nine tenths of the people belong to the Eastern Orthodox Church, which is supported by the state. No other clergy are recognized, though all religions are tolerated.

Education. Education has been greatly neglected but is now receiving more attention. According to the census of 1899, of the population over seven years of age, 78 per cent could neither read nor write. In 1905 there were 4,264 elementary schools. The Universities of Bukharest and Jassy had 4,072 students.

Defense. All Roumanians are liable to service between their twenty-first and forty-sixth year. The present system is experimental. Two fifths of the men serve at intervals for five years in the infantry or four years in the cavalry. The remainder serve continuously two or three years in the infantry and six in the active reserve. Service in the second line or Landwehr is for six years and in the Gloata or Landsturm for ten years. On a peace footing the army contains 136,000 men; on a war footing, over 500,000. The navy consists of one protected cruiser, one training ship, and about twenty gunboats of various kinds. There is one floating dock.

The area is 50,740 square miles. The inhabitants are more than 6,000,000.

1861. December 23, the two principalities of **Wallachia and Moldavia unite and take the name of Roumania.**

1866. February 23, revolution forces Prince Alexander Joan I. (Colonel Couza) to abdicate. April 20, Prince Charles of Hohenzollern-Sigmaringen is elected Domn, or Lord, of Roumania as Carol I. and enters Bukharest on May 22.

1869. November 15, Prince Carol marries Princess Elizabeth von Wied.

1877. April 16, a secret treaty with Russia allows the Russian troops to cross Roumania against Turkey.

May 21, Roumania declares its independence and sends 69,000 troops to join the Russian forces in Turkey.

1878. Roumanian independence is recognized by the Congress of Berlin July 13.

1881. March 26, Prince Carol is proclaimed King of Roumania.

1889. March 18, Prince Ferdinand of Hohenzollern-Sigmaringen, nephew of the childless Carol I., is declared heir to the throne and "Prince of Roumania."

1902. September 17, the United States Secretary of State, John Hay, sends a note to the powers, urging that Roumania be compelled to ameliorate the condition of her Jewish subjects.

December 27, Roumanian Senate adopts a measure providing for **naturalization of the Jews.**

1907. March-April, Anti-semitic and agrarian riots cause great destruction of life and property. Over 100,000 troops are employed in restoring order.

RUSSIA.

Russia was the last of the great European powers to emerge from barbarism. At the middle of the seventeenth century the emergence was only half accomplished. Ivan the Terrible filled Russian history during the sixteenth century. He made a treaty with Queen Elizabeth and was the first Russian sovereign to take the title of Czar. After weak reigns and an interregnum Mikhail Feodorovich Romanov was elected to the throne in 1613. In the third year of the reign of his son Alexis the Thirty Years' War was ended with the Treaty of Westphalia.

By Alexis, after nine years of conflict, the Cossacks were humbled and compelled to yield to the scepter of the Czars. At this time Kiev and the Ukraine were transferred to the imperial dominions.

Meanwhile, the beginnings of civil progress were seen in Russia. Between the years 1676 and 1682 several important reforms were accomplished in the policy of the empire. The fourth of the Romanovs was Ivan V., the imbecile brother of his predecessor, who was succeeded in 1696 by the Empress Sophia, whose nominal reign extended to 1704.

Peter the First, surnamed the Great, was nominally the successor of his half brother Ivan. The reign of the Empress Sophia was in the nature of an insurrection against his rule. The rebellion was ended by the joint coronation of *both* brothers under the regency of the sister; but the rugged Peter soon asserted his power and his rivals were suppressed. His reign of barbaric reform was undertaken in earnest about 1704, and from that time until his death, twenty-one years afterwards, the heroic task of forming and transforming the Russian populations out of the half-savage into the civilized state was prosecuted with ferocious energy.

The Czar studied Western Europe in person, even working with his hands as a shipwright in Amsterdam. On his return he broke up the old military organization of the empire and substituted European for Asiatic methods of government. He permitted nothing to impede his purposes. He compelled his subjects to become commercial, to shave themselves, to cut off their superfluous sleeves, to dress in the manner of the Occidental nations, to live and to fight and conduct their intercourse according to the codes then prevailing in Western Europe.

Then came the war with Sweden when the armies of Charles XII. and the Czar met in mortal combat. The Swede went down before the Slav. The empire began to be consolidated. Moscow was abandoned in favor of the new capital which the Czar founded in the Lagoon of the Neva. There the Muscovite dynasty was confirmed, and there the Czar, save in the intervals of his campaigns, resided during the remainder of his reign. The Russian army was supplied with European officers. Foreign statesmen were called to responsible places in the government, and Voltaire was invited to leave the sunny south for a residence on Lake Ladoga.

Peter the Great died in 1725 and was succeeded by the Empress Catherine I. in a brief reign of a few years' duration. Peter II., grandson of the late Czar, followed, when the crown was transferred to the head of his cousin, the Empress Elizabeth. Her reign of thirty-two years was terminated in the year 1762. In the same year, by the assassination of her nephew, Peter III., Catherine the Great became the undisputed mistress of all the Russias.

The interval of the reign of this remarkable woman, German by birth, Russian by education and adoption, corresponds almost precisely with the ascendency of Frederick the Great in Germany and of Washington in the New World. Empress Catherine in her ambition and audacity was hardly inferior in personal qualities to the Czar Peter. Her views of statecraft were as ample and far-reaching as those of any sovereign of her century. Of her and her court Voltaire declared, "Now the light shines out of the north." This auroral radiance, however, was the glare of ambition and half-barbaric force rather than the steady sunlight of civilization.

Two months after Washington issued his farewell address, and on the day of Napoleon's victory over the Austrians at Arcole, Catherine expired, leaving the crown to her son, Paul I. He it was who conceived the romantic sentiment for Bonaparte and would fain be his brother. It was the devotion of a weakling to a lion's whelp — a circumstance which would probably have produced historical results but for the unanticipated death of Paul, in 1801.

He was succeeded by the Crown Prince Alexander I., that commonplace emperor with whom Napoleon made treaty and war by turns until only war would suffice. The great invasion of 1812 followed. The grand army of Napoleon and his allies sank to rest under the limitless snow fields between the Niemen and the Moskva. Nothing more memorable has occurred in military annals. Alexander and Emperor Francis of Germany and Frederick William III. of Prussia carried their victorious cohorts into Paris. In alliance with them Great Britain destroyed the empire of Napoleon, first in the field and then in the cabinet.

Alexander I. lived to prosecute the purposes of the Holy Alliance until 1825, when his brother Nicholas succeeded him and renewed the measures, in abeyance since the death of Catherine the Great, for the aggrandizement of the Russian empire. In a reign of thirty years he steadily pursued this policy. At length his purpose and motion were arrested by the joint action of Great Britain, France, Sardinia, and Turkey, whose allied forces before Sebastopol brought the Crimean War to a victorious close, in 1855. The conditions of peace were declared in the following year in the great treaty of Paris, by which the principles of international law were in several particulars amended and enlarged.

Meanwhile the imperial crown had gone to the son of Nicholas, Alexander II., whose peaceable policy was in marked contrast with the warlike spirit of his father. During the period of the American Civil War the influence of Alexander, conservative and humane, was felt throughout Christendom. His internal policy was also as enlightened and progressive as the conditions under which he was placed would permit. He set himself resolutely against the system of serfdom which had existed since the foundation of the empire. The Russian serfs, unlike the African slaves in America, were vassals of the estates on which they resided, and were transferred from one landlord to another with each transfer of the estate. The landholders violently opposed the purpose of the Czar to break down this system, but on March 3, 1861, he issued his decree of emancipation. By this measure about 22,000,000 serfs were liberated from vassalage.

Shut in from the sea, Russia has longed for the Bosporus as her natural outlet, and both rulers and people have looked forward to the acquisition of Constantinople. Of the same church as the Christian subjects of Turkey, they have sympathized constantly and profoundly with the sufferings of their coreligionists in the Turkish empire. The massacres of Bulgarians in 1876 roused the whole Russian people. A conference of the powers at Constantinople led to no result. Alexander II. was essentially a man of peace, but national sentiment and national ambition brought on the Russo-Turkish war of 1877–78. Turkey was overwhelmed and signed the preliminary treaty of San Stefano, which almost blotted her from the political map. Europe refused to sanction that treaty, which was revised in the interest of Turkey by the Congress of Berlin.

The Czar was about to proclaim a charter, granting the people a share in public affairs, and the text was already being printed, when he was killed by a bomb, hurled by a nihilist, on March 13, 1881. Alexander III., son of the murdered Czar, succeeded. Less liberal than his father and, moreover, incensed by his father's assassination, he restored quiet by terrorism and ruled by old-fashioned arbitrary methods. On his death in 1894 his son, Nicholas II., ascended the throne. The contradictions of his reign are many. They are indicated in his proposal of an international peace conference and in the calamitous Russo-Japanese war; in the proclamation of paper reforms, together with summoning of the Duma, and in merciless and sanguinary repressive measures not exceeded in antecedent Russian history.

Government. Russia was an absolute, hereditary monarchy, and all legislative, executive and judicial power is in point of fact still centered in the Czar. But, by the ukase of August 19, 1905, a Duma or National Assembly, whose members should be elected, was summoned into being. In the following October a sort of constitution was proclaimed, affirming natural rights, and granting freedom of conscience, speech and assembly. Its most important feature was the solemn declaration that henceforth the approval of the Duma was requisite to the enactment of any law. The first and second Dumas proved refractory. In consequence modifications have been introduced, both in the manner of election, in restriction of electors, and in conditions of eligibility to serve as deputy. At present deputies, elected for five years by indirect vote, are chosen to represent the provinces or governments and the cities of St. Petersburg, Moscow, Warsaw, Kiev, Lodz, Odessa and Riga. While the powers of this body are limited, ill-defined and subject to violations, none the less the mere existence of a Duma is an indication of great political advance.

A council of the empire was proclaimed on March 6, 1906, half the members to be named by the Czar, half to be elected for nine years, one third retiring and being replaced every third year. Altogether there are 96 councilors. The Holy Synod chooses six; the Universities and the Academy of Sciences, six; the Chamber of Commerce and of Industry, twelve; the nobility, eighteen; the landed proprietors of Poland, six.

The Duma and the Council have identical powers. No measure passed by one house can be submitted to the Czar till approved by the other. No petition can be received by either body. All sessions are public.

The former imperial administrative councils are still retained. They are: the Ruling Senate, created by Peter the Great in 1711, which is a sort of high court of justice; the Holy Synod, created by Peter the Great in 1721 and presided over by the Metropolitan of St. Petersburg, which superintends religious matters; the Council of Ministers, organized in 1905, and comprising all the Ministers of State and the directors general of departments.

The Ministers are: of the Imperial House and the Imperial Domains; Foreign Affairs; War; Navy; Interior; Public Instruction; Finance; Justice; Land Organization and Agriculture; Ways and Communications; Commerce and Industry; General Control; the Procurator General of the Holy Synod; the State Secretary for Finland. There are a number of Cabinets of less prominence. The local unit is the mir, the district unit is the zemstvo, and the departmental unit is the government or province, into 78 of which the whole empire is divided.

The special rights or privileges enjoyed by Finland, Poland, and the Baltic

Provinces, some of them confirmed by the oaths of the Czars, have nearly all been suppressed.

Industry and Labor. The industries of Russia are still in the primitive stages of development. Since the age of Peter the Great improvements have been introduced, the general effect being the substitution of the European for the Asiatic manner of life.

The vast area of the Russian empire has also given a peculiar character to the industrial life. The system of landed estates and serfdom which prevailed until 1861 gave cast to the industrial methods of the people. All the Slavic races have a strong bias for agriculture. The West Slavs are perhaps the most agricultural people in Europe.

In Russia one remarks the vast extent of territory and the variety of climate and soil. Her products are, first of all, the products of the field. The village communities are composed mostly of farmers. Their condition as laborers is hard and unprogressive. The liberated serfs and their descendants are mingled with the other poor, and the energies of the whole are consumed in a battle for life which is little relieved with social happiness and progress.

Until a late period the primary productions of Russia have been mostly used in supplying the wants of the people, with little overplus for exportation. The Russian manufactures, however, have yielded their products for foreign trade. The exports include the cereals and wheat in particular. The Crimea and Bessarabia produce wine for exportation. Of tobacco there is also a considerable quantity sent abroad. The horticultural interests are considerable, but are limited to the neighborhoods around the cities and towns. Several varieties of Russian fruits, particularly apples, are sought for in foreign lands. Domestic animals are produced in great abundance.

The mineral wealth of Russia includes all the valuable metals and other natural resources of the earth, such as salt and niter. The distilling interest is extensive. The manufactures include woolen goods, silk, cotton, leather, tallow, candles, soap, and metallic wares. The beet-sugar industry has developed into great importance. The introduction of improved machinery has greatly facilitated the processes of manufacture, and has extended to agricultural industry. The products of Russian art and artisanship, however, have been injured rather than improved by the substitution of mechanism for the skillful handiwork which prevailed up to the middle of the last century.

Religion. The religion of the Russian empire is officially styled the Orthodox-Catholic faith. It is the Greco-Russian or Eastern Orthodox form of Christianity. The Church government is directed by an independent synod, though ecclesiastically connected with the four patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria.

In his relation as head of the Church the emperor appoints the officers to every ecclesiastical function. The Holy Synod exercises the right of deciding all theological and dogmatic questions. In the clerical offices of the Greek Church celibacy is not enforced, but second marriages are prohibited. The scriptures and the ritual are in the vernacular. All other religions are tolerated with the exception of Judaism. According to the official report of 1905 there were 87,123,604 communicants of the National Church, 13,906,972 Mussulmans, 11,467,994 Roman Catholics, 5,215,805 Jews, 3,572,653 Protestants, 2,204,596 Dissenters, and 1,179,241 Gregorian Armenians. There were numerous other faiths with less than a million adherents.

Education. Russia has no lack of institutions of high order, technical, professional, and special. Her defect is in the poor equipment of the secondary and primary schools and in their small number as compared with the immensity of the empire. Yet of primary schools there were 92,501 in 1907. The Universities of Moscow, St. Petersburg, Kiev, Kharkov, Dorpat, Warsaw, Kazan, Odessa, and Tomsk in 1907 had altogether 31,768 students.

Defense. The Russian empire has the most extended land frontier of any country in the world, touching territory of Norway, Sweden, Germany, Austria-Hungary, Roumania, Turkey, Persia, Afghanistan, Great Britain, China and Japan. Its most open coast line is on the Baltic, Black Sea and Sea of Japan. Most exposed in the extreme west, where Russia projects like a blunt wedge between Germany and Austria-Hungary, it is protected by the Polish quadrilateral consisting of the strong fortresses of Ivangorod, Warsaw and Novogeorgievsk on the Vistula and Brest Litovsk on the Bug. The system of fortifications defending the frontier and coast line is elaborate and, as far as possible, complete. The enormous extent of Russia renders her unwieldy, when acting on the offensive, though invulnerable to attack.

The military force is enormous, but poorly officered and poorly equipped. Its proposed organization on the German system has never been carried into effect. Russia has three really distinct armies, the European army, the Asiatic army, and the army of the Caucasus. All able-bodied men are supposed to serve from their 21st to their 44th year. Three years are passed in the infantry or 4 in the other branches, then 14 years in the reserve or zapas, and finally 5 years in the territorial army. During the last two periods there is little practice or drill. In this general system there are many modifications and there are many exemptions. The Asiatic army, no less than the other two armies, is recruited from Russians and not from Asiatics. Therein it differs from the British army in India, which consists mainly of East Indians. So many battalions are skeletons and so many rolls are padded, that Russian estimates as to the real military strength on a peace footing differ by hundreds of thousands and likewise as to strength on a war footing. The peace footing is commonly supposed to be 1,200,000 men and the war footing 4,000,000 men.

Russia's geographical situation requires the maintenance of four distinct and separate fleets, on the Baltic, on the Black Sea, on the Caspian, and in Asiatic waters. Practically the whole Russian navy was destroyed in the Russo-Japanese war. The fleet of Admiral Rozhestvenski, after a remarkable cruise from the Baltic, was annihilated in 1905 by Admiral Togo in the Straits of Tsushima. The Asiatic fleet had previously been captured or had surrendered. The far smaller squadrons in the Black and Caspian seas were saved by their inability to reach the scene of action. Since conclusion of peace much attention has been devoted to reconstruction of the navy. Russia now has 12 battleships, 4 building; 14 armored and protected cruisers, 2 building; 7 torpedo gunboats; 66 destroyers, 33 building; 50 torpedo boats; 22 submarines. A further increase in naval strength is projected.

The area of the empire is 8,647,657 square miles, of which 317,468 square miles are occupied by inland seas. The land surface of European Russia comprises 2,122,537 square miles, and of Asiatic Russia 6,207,662 square miles, of which 4,786,730 are included in Siberia.

The population in 1907 was 152,009,200.

1654. The **Cossacks**, having revolted against Poland, place themselves under the protection of Russia, by the petition of their leader, Chmielnicki, and a **war between Poland and Russia** follows. In the next year Charles X. of Sweden makes an invasion of Poland; the Cossacks return to their allegiance to the Polish crown, in 1656, and join in a defense of the country against the Swedish army and the forces of Frederick William, elector of Brandenburg, the ally of Charles X.

1656. Czarniecki leads the **Poles** in a series of successful campaigns, but they are **overwhelmed** in the battle of Warsaw, July 28 to 30.

1657. **Austria** comes to the **aid of Poland**, and the elector of Brandenburg also changes to the side of the Poles. In return, Poland by the treaty of Wehlau relinquishes her suzerainty over Prussia.

1660. The **peace of Oliva** puts an end to the war with Sweden, Poland ceding Livonia and Esthonia to her rival.

1667. A **treaty** is made at Andrusovo with **Poland**, by which Poland loses the Ukraine east of the Dnieper. In the following year John Casimir of Poland abdicates the throne, and Michael Wisniowiecki is elected his successor, in 1669.

1674. Wisniowiecki having died in 1673, **John Sobieski** is chosen king.

1676. **Feodor III.** succeeds to the throne of Russia, on the death of his father, **Alexis.**

1682. Feodor is succeeded by his brothers, **Ivan V.** and **Peter the Great**, with their sister, **Sophia**, as regent.

1683. The Poles aid in the war against the Turks. (See AUSTRIA.)

1689. The Strelitzes form a conspiracy under the direction of the regent, Sophia, to seize the government of Russia, but the scheme is thwarted by **Peter the Great**, who assumes the **sovereign authority.**

1696. **John Sobieski** of Poland **dies**; in the following year he is succeeded by Frederick Augustus I. of Saxony, who takes the title of **Augustus II.** Peter the Great, in a war against the Turks, routs the enemy and captures Azov. (See TURKEY.) In the following year a truce is signed at Karlowitz in December.

1699. The **peace of Karlowitz** puts an end to Poland's conflict with the Turks, and she recovers a part of the Ukraine.

1700. Russia and Poland join in a war waged by Denmark against Sweden; the army of **Peter the Great** is vanquished by **Charles XII.** at Narva, November 30. (See SWEDEN.)

1702. Charles XII. makes a campaign in Warsaw and enters Cracow.

1703. Peter the Great founds **St. Petersburg.**

1704. Augustus II. is dethroned by Charles XII. of Sweden, who secures the election of Stanislas Leszczynski to the crown of Poland. Dorpat and Narva are, however, captured by Peter the Great.

1708. Russia is invaded by Charles of Sweden, but in the following year, July 8, **Peter the Great crushes the Swedish army** at **Poltava** and Charles becomes a fugitive. Augustus hereupon is restored to the throne of Poland.

1711. Charles XII. secures the aid of the **Turks** and a bloody war is waged against the Russians. Peter the Great is hemmed in at the river Pruth and is compelled to make a disadvantageous peace, by which the Turks recover Azov and other territories.

1721. The **treaty of Nystad** puts an end to the war with Sweden; Livonia, Esthonia, Ingria, and Karelia are ceded to Russia.

1722. Peter the Great wages a **war against Persia**, and in the following year annexes a large territory.

1725. **Catherine I.** succeeds her husband, Peter the Great, on the Russian throne. In the following year Russia joins with Austria and Spain in a **triple alliance**, at Vienna. (See AUSTRIA, also SPAIN.)

1727. **Catherine I.** of Russia **dies**; she is succeeded by **Peter II.**, the grandson of Peter the Great.

1730. Peter II. is succeeded by **Anna**, a niece of Peter the Great.

1733. Augustus II. dies and Stanislas Leszczynski is elected king of Poland by a body of the nobles. A smaller number of the nobles support the claims of Frederick Augustus II., who claims the title of Augustus III.; Stanislas is driven from the kingdom by the Russians and Austrians, who support Augustus, while France under Louis XV. (son-in-law of Stanislas) assists that candidate for the throne. A war follows (see FRANCE); by the preliminary treaty of Vienna the **war of the Polish succession ends** with a victory for Augustus III.

1735. Stanislas Leszczynski receives the inheritance of Lorraine.

1736. Russia renews the war against **Turkey**, and Azov is captured.

1739. The Russians under Münnich make a victorious campaign and conclude a **favorable peace.**

1740. Augustus III. of Poland lays claim to a share in the inheritance from Charles VI., the Austrian emperor; he thus becomes involved in the **war of the Austrian succession.** (See AUSTRIA, GERMANY, and FRANCE.) **Anna**, empress of Russia, **dies** and is succeeded by the infant **Ivan VI.**, with Biron as regent. In the following year Ivan VI. is deposed and the throne is taken by **Elizabeth**, daughter of Peter the Great.

1741. Russia again engages in a **war with Sweden** (see SWEDEN); a treaty between the two countries is signed two years later at Åbo.

1747. Elizabeth of Russia forms an **alliance with Maria Theresa** of Austria and sends an army to the aid of the Austrians in the war of the succession. (See AUSTRIA).

1757. Russia participates in the **Seven Years' War** and overruns East Prussia; the army under Soltikov shares with the Austrians in crushing the army of Frederick the Great at Kunersdorf, August 12. In the following year they enter Berlin with the Austrians.

1761. The Russians under Buturlin, with the Austrians, attack Frederick the Great in his fortified camp at Bunzelwitz, in August and September. In December Kolberg surrenders to the Russians.

1762. On January 5, the empress **Elizabeth dies**; she is succeeded by **Peter III.**, of the House of Holstein-Gottorp. He changes the policy of Russia to the support of Frederick the Great. **Catherine II.** of Russia, the wife of Peter III., usurps the throne, July 9, and on July 17 Peter is assassinated; whereupon the brief alliance with Frederick is broken off.

1763. Augustus III. of Poland dies; in the following year Stanislas Poniatowski, aided by Catherine II., is chosen as his successor.

1768. The Poles form the **confederation of Bar** to resist the encroachments of Russia. At the same time the Turks begin a war against the empress, Catherine II. In the following year a successful campaign is waged by the Russians in Moldavia.

1770. The Russians are victorious in Wallachia and the fleet under Orlov and Elphinstone overcomes the Turks at Scio; in July the fleet of the Turks at Chesme is burned by Elphinstone, and the army of General Rumyantsev (Rumiantzeff) conquers the Tatar khan of the Crimea, the vassal of Turkey, on the Pruth; he again defeats the Turks on the Kagul, and in September an army under Panin storms Bendery.

1771. The Russians under Dolgoruki attack the lines of Perekop and **gain possession of the Crimea.**

1772. Catherine II. of Russia, Frederick the Great of Prussia, and Maria Theresa of Austria unite in a **partition of Poland.** A large territory on the Düna and upper Dnieper is taken by Russia; Polish Prussia, except Thorn and Danzig, is apportioned to Prussia along with other tracts; a vast country on the borders of Hungary is added to the Austrian empire and erected into the kingdom of Galicia and Ludomeria. The residue of Poland, including Warsaw, continues as a kingdom under the sovereignty of Stanislas Poniatowski.

1773. The Russians in the **war against Turkey** make a victorious advance through Bulgaria, but they are defeated and checked at Varna and Silistra.

1774. The Russians besiege Shumla, but negotiations for **peace with Turkey** are successful, and a **treaty** is made at Küchük Kainarja, by which Turkey yields up her suzerainty over the Crimea.

1783. The Crimea is formally annexed to Russia.

1787. Turkey again goes to war with Russia and in the following year Sweden also begins hostilities.

1789. The Russians with Austrian allies defeat the Turks at Focşani, and the Russian army under Suvaroff (Suvorov) occupies Bendery. A year later, on December 22, Suvaroff storms Ismail.

1793. A peace between **Russia and Turkey is signed at Jassy, in January,** Austria having already concluded a treaty; Ochakov is added to the Russian domain and the **empire is extended to the Dnieper.**
In Poland, a party of malcontents establishes the confederation of Targovitsa (Targowica) and a Russian army invades the kingdom. A **second partition of Poland** is made; Russia acquires a large part of Lithuania, part of Volhynia, Podolia, and Polish Ukraine, while Prussia annexes the western territory and takes Danzig, a free city since 1772.

1794. A general **uprising of the Poles** occurs with **Thaddeus Kosciusko** as its leader, but Russia, Prussia, and Austria unite to suppress the insurrection; Kosciusko is overcome at Maciejowice, October 10, by the armies of Suvaroff and Fersen, and is taken prisoner. Suvaroff leads his forces to the storming of Praga, and its citizens are massacred, November 4. Hereupon Warsaw surrenders, November 8, and the rebellion is at an end.

1795. The Polish kingdom is divided for the third time, and with this partition its **independence definitely ends.** Prussia gains Warsaw and Stanislas Poniatowski formally abdicates.

1796. **Catherine II.** of Russia dies and is succeeded by her son **Paul,** November 17.

1798. Russia forms an **alliance with England** against the French, in December

1799. Suvaroff, commander in chief of the allied Russian and Austrian armies in Italy, defeats Moreau at Cassano, April 27. (See FRANCE.)

1801. Russia makes a treaty of peace with France, in October. Gruziya, or **Georgia, is annexed to Russia.** A conspiracy is formed in the capital against the czar Paul; on March 23, he is assassinated; he is succeeded by his son, **Alexander I.**

1806. War with Turkey again breaks out.

1808. **Finland** is taken by Russia from Sweden by force of arms; in the following year the conquered territory is ceded to the Czar.

1809. Russia declares war against Austria, May 3. (See FRANCE, also AUSTRIA.)

1810. In the war with Turkey, Kamenski leads his army on a victorious campaign into Bulgaria; Silistra is forced to yield. Shumla resists the Russian attacks; the garrison of Rushchuk surrenders.

1811. Kutuzov makes a campaign against the Turks along the Danube.

1812. On June 22, **Napoleon** declares **war against Russia** and prepares for an invasion of the Czar's territories. He is victorious at Smolensk and burns the city, in August. Kutuzov is defeated at **Borodino,** September 7, and **Murat enters Moscow,** September 14. The city is fired by the Russians, and in October the French begin a retreat; they are continually harassed by the Russians until the **Grand Army is virtually destroyed.**
On May 28, Russia concludes a treaty of peace with Turkey, at Bukharest, by which the Pruth is established as the boundary between the two nations.

1813. Persia is forced to cede to Russia Dagestan, Shirvan, Baku, and other regions; these domains are formally surrendered by the treaty of Tiflis, in the following year.

1815. The congress of powers at Vienna, in June, confirms Russia in the possession of Finland. In September of this year Russia unites with Austria and Prussia in forming the **Holy Alliance.**

1825. **Alexander I. dies,** December 1; he is succeeded by his brother, **Nicholas I.**

1826. The treaty of Akerman is made with Turkey. The Persians begin a war. In the following year they are defeated by the Russians under Paskevich, who captures Erivan and Tabriz.

1828. In April, Russia undertakes another war against Turkey and in June an army under Wittgenstein crosses over the Danube. Kars is captured in July by Paskevich and Varna yields in October.
In February, a peace with Persia is concluded by which **Persian Armenia** is ceded to Russia.

1829. The Russians under Diebitsch possess Silistra, and Erzerum is captured by the forces of Paskevich. Diebitsch enters Adrianople by way of the Balkans and the **peace of Adrianople** follows, on September 14. Turkey cedes to Russia the northeastern coast of the Black Sea and renounces the suzerainty over the tribes of the Caucasus. A Russian protectorate over Moldavia and Wallachia is also permitted; the district of Akhaltsikh is ceded to Russia, and Turkey acknowledges the independence of Greece. (See TURKEY, also GREECE.)

1830. A **revolution** begins in **Poland,** November 29, and the Russian troops under the Grand Duke Constantine withdraw from Warsaw. Chlopicki is made dictator by the Poles, in December.

1831. He resigns in January. Adam Czartoryski, at the head of the national government now established, proclaims the independence of Poland, January 25. Diebitsch leads an army of the revolutionists sent to make a rising in Lithuania. Warsaw capitulates, on September 8, and the liberty of Poland is lost. In the following year the Czar proclaims **Poland an integral part of the Russian empire.**

1837. The forces of General Ivelich are overcome by natives of the Caucasus under the lead of **Schamyl.**

1839. General Grabbe is successful in a campaign against the Caucasians and captures Akulgo; the expedition sent under Perovski against Khiva results in disaster.

1840. An attack on the Russian forts along the Black Sea is made by the Circassians, but the campaign is unsuccessful.

1842. General Grabbe meets with a series of disasters in another campaign against the natives of the Caucasus.

1845. A large expedition is sent against the Caucasians under the command of Vorontsov.

1846. In February the Poles make an insurrection. The chief of the movement, Mieroslawski, is arrested in Posen by the Prussians. The peasants in Galicia rise against the Polish nobles and slaughter them; Austria annexes Cracow.

1848. The Poles in Posen rebel again under the leadership of Mieroslawski, who has regained his liberty, but the movement collapses.

1853. In March, the Czar demands that a **Russian protectorate** shall be extended over the **Greek Christians in Turkey.** The demand is refused, and England and France prepare to aid Turkey in resistance. In June, the allied fleets of these powers are placed in Besika Bay. In July, the forces of Russia enter the Danubian principalities. Three months afterward the ships of the English and French sail through the Dardanelles. At the same time a body of Turkish soldiers crosses the Danube at Vidin, under the command of Omar Pasha, and hostilities begin. On November 4, the Russians are defeated at Oltenitsa, but the **Russian fleet** under Admiral Nakhimov **annihilates the Turkish squadron** at Sinope, November 30. In December, at Vienna, a protocol of the great powers is directed against Russia.

1854. In January, the fleets of England and France enter the Black Sea, and in March the Baltic fleet of the English sails under the command of Sir Charles Napier. In the latter month Prince Mikhail Gorchakov leads a Russian army across the Danube. The **English and French** now formally declare war against Russia, thus precipitating the conflict historically known as the **Crimean war.** In March and April the British and French armies are landed in Turkey, and the French fleet in the Baltic sails for the scene of war, in April. Odessa is bombarded by the allies, in April. A month later Silistra is besieged by the Russians under Paskevich, but they are forced to abandon the attack in June. Bomarsund surrenders his command to the allies on August 16. At the demand of Austria, the Russians withdraw from the Danubian principalities, and Austrian troops, in August and September, garrison the territories with the formal consent of the Porte. On September 14, the English and French reach the Crimea under the command of Lord Raglan and Saint-Arnaud; they defeat the Russians under Menshikov in the **battle of the Alma,** September 20. Saint-Arnaud dies and is succeeded by Marshal Canrobert. In October, the **allies besiege Sebastopol,** which is defended by Totleben. The **battle of Balaklava,** in which the charge of the Light Brigade occurs, is fought October 25. On November 5, the Russians are routed at Inkerman. An embassy is sent under General Perovski to the khan of Khiva; a treaty greatly in favor of Russia is negotiated.

1855. Victor Emmanuel of Sardinia allies himself with France and England against Russia, in January. In March, the Czar, **Nicholas I., dies** and is succeeded by his son, **Alexander II.** In the same month Gorchakov is sent to take command of the Russian troops in the Crimea. In April a protracted bombardment of Sebastopol is made by the allies, who are reinforced in May by the arrival of Victor Emmanuel's Sardinian soldiers. Marshal Pélissier now succeeds Canrobert in the command of the French, and the allies succeed in destroying the Russian stores at Kerch. The Malakhov (Malakhoff) is stormed on June 18, but the attempt is a failure. On June 28, Lord Raglan dies. The Russians move forward to relieve Sebastopol, but they are withstood and defeated at the Chernaya (Tchernaya), August 16. On September 8, the French storm the Malakhov and the English the Redan; **Sebastopol falls.** Muravev makes an effort to capture Kars, September 29, but fails. On October 16, Kinburn is captured by the allies. On November 27, Kars surrenders to Muravev.

1856. On March 30, the **treaty of Paris** is signed, and with it the Crimean war ends. The Black Sea is declared to be neutral. Russia cedes a part of Bessarabia and it is added to Moldavia; Russia also renounces her protectorate over the Danubian principalities. An international Danubian commission is instituted; new principles of international law are declared.

1859. On September 6, at Gunib, **Schamyl,** chief of the Caucasians, **surrenders;** by this act the authority of Russia over the mountain tribes is fully established.

1861. Alexander II. issues an imperial decree by which **22,000,000 serfs are freed,** March 3.

1863. The Poles make a disastrous attempt to rise. The committee of the revolution issues a summons calling the patriots to arms; those who respond are routed by the Russian troops, and in the following year the insurrection ends in disaster to the patriots.

1864. The Russians complete the **subjugation of the Circassians.**

1868. Samarkand is subdued by Russia.

1870. Russia declares her refusal to abide longer by the stipulations of the treaty of Paris as to the neutrality of the Black Sea. In the following year a conference of the powers is held in London, January 17, to consider the question of the Black Sea, and a new treaty is formulated and signed, March 13. This second agreement omits the clause declaring the neutrality of the Black Sea.

1873. General Kaufmann is sent in charge of a Russian expedition against Khiva, and **Khiva is taken,** June 10. In August a treaty of peace is made.

1876. The Czar insists on Turkish reforms in the Christian provinces and issues an ultimatum to the Porte, October 30. (See TURKEY.) Russia annexes Kokan.

1877. The Turkish rejection of the Czar's proposals leads Russia to declare **war against Turkey,** April 4. (See TURKEY.) In the following year the Russians, after a victorious campaign, occupy Adrianople. January 20. On January 31, an armistice is signed, and on March 3, the **treaty of San Stefano** is concluded. (See TURKEY.)

1878. A congress of the powers meets at Berlin, June 13, and the **treaty of Berlin** is concluded, July 13. By its stipulations Russia receives the larger part of Turkish Armenia, with Kars and Ardahan, and also Batum and that portion of Bessarabia formerly ceded to Moldavia. (See TURKEY.) General Mezentsev, director of the third section of the imperial chancellery, falls a victim to a plot of the Nihilists and is murdered, August 16.

1879. **Krapotkin,** the governor of Kharkov, is **assassinated,** February 21. On March 25, an attack is made on Drenteln, who has succeeded to the position of Mezentsev, but he escapes. Solovyev tries in vain to kill the Czar, Alexander II., on April 14. On December 1, the Nihilists endeavor to blow up the train on which the Czar is going to Moscow, but they are again foiled. The Tekke-Turkomans defeat a Russian force under General Lomakin, at Gök-Tepe, September 9. In July of the following year another expedition is sent against them under the command of Skobelev.

1880. On February 17, the Nihilists try to blow up the imperial family of Russia in the Winter Palace. Thereupon General **Loris-Melikov** is made chief of a supreme commission, with autocratic authority, to **suppress Nihilism.** February 24. Commission abolished in August.

1881. Gök-Tepé is captured by the Russians, January 24, and in the following month a treaty with China is concluded, respecting Kulja.
On March 13, the Czar, **Alexander II., is assassinated** by a Nihilist, one of five conspirators; he is succeeded by his son, **Alexander III.** In April, a persecution of the Jews begins. On May 16, **Ignatiev** is appointed minister of the interior, to succeed Loris-Melikov.
1882. **Count Tolstoy** succeeds Ignatiev as minister of the interior.
1883. On May 27, Alexander III. is crowned at Moscow.
1884. The Czar meets the emperors of Germany and Austria at Skierniewice, southwest of Warsaw, September 15, for a conference of three days. The Tekke-Turkomans of Merv yield their allegiance to Russia.
1885. Komarov with a body of Russians gains possession of the Zulfikar Pass on the road to Herat; on March 30, he engages in battle with the Afghans on the Kushk. England fears a Russian charge on Herat and makes a settlement of the **boundaries between Turkestan and Afghanistan** to the advantage of Russia. In August, the Czar meets the emperor of Austria at Kremsier, in Moravia.
1888. The Trans-Caspian railway is opened as far as Samarkand.
1891. On April 29, the government orders the **expulsion of the Jews** from St. Petersburg, and they are afterward banned throughout the greater part of the empire.
1892. Russia is afflicted with famine and a return of Asiatic cholera.
1893. A plot of the Nihilists is discovered and fifteen hundred implicated in the conspiracy are sent to Siberia, in May; the cholera again desolates cities and villages.
The **Russian fleet visits Toulon,** in October, and is magnificently welcomed by the French.
1894. The cholera prevails in Russia for the third successive season.
On November 1, **Alexander III. dies;** he is succeeded by his son, **Nicholas II.,** who, on November 26, weds Princess Alix of Hesse.
1896. The Czar and Czarina are crowned with imposing solemnities at Moscow, on May 26. On May 30, a panic among the crowds on the plain outside the city, where they are receiving a distribution of bread, causes the death of more than one thousand persons.
1898. Wide suffering from famine prevails in nineteen provinces.
1899. February 15, imperial manifesto **annulling autonomy of Finland.** In May, Peace Conference, at invitation of Czar, meets at The Hague to consider international disarmament, war reforms, and arbitration. It proposes a treaty providing for a permanent arbitration tribunal; adjourns July 29.
1900. July 3, imperial ukase abolishes, in large measure, banishment to Siberia. Tolstoy is excommunicated, September 28.
1901. A serious **outbreak of students,** begun in Kiev in December, 1900, spreads to Odessa, Kharkov, Moscow, and St. Petersburg. M. Bogolyepov, minister of public instruction, is assassinated. The official announcement of Tolstoy's excommunication, March 9, arouses the students anew. The riots are suppressed with great cruelty by the Cossacks, hundreds of persons being arrested and many students drafted into the army. Protests are signed by leading Russian writers, and a petition to the Czar for a constitution is rumored. Reforms in the scholastic system are granted in April, and in May the Czar pardons the soldier students and other absentees from the universities.
On February 16 Russia retaliates on the advance of the United States duty on Russian sugar by additional duties on certain American goods.
A **crop failure** and resulting **famine** in western Siberia affect an area of a million square miles and 43,000,000 persons.
Another step in the denationalization of Finland is taken by abolishing Finland's national army and converting it into a body of Russian troops officered by Russians.
Rail laying on the **Northern Manchurian Railway is completed,** November 3, giving through rail service from Moscow except for the break at Lake Baikal.
1902. For *Chinese relations*, see CHINA.
1903. Continual unrest prevails in Russia; many of the details are suppressed.
March 12, the Czar, in a **manifesto, promises** to grant freedom of worship to his subjects; a **degree of self-government** in the communes; and opportunity for the peasants to escape some communal restrictions and taxations. On April 19, the Russian Easter, taxes unpaid by the peasantry amounting to $100,000,000 are canceled, and the peasants are in part released from service to the commune.
At Kishinev on April 19–20 a **mob kills 45 Jews,** injures nearly 500, and destroys 700 houses. The government takes little action.
May 12, Bogdanovich, governor of Ufa, is assassinated.
May 29, the **bicentenary of St. Petersburg's founding** is celebrated.
Anti-Jewish outbreaks occur at Tiraspol, Gomel, Lodz, etc., in May and June.
In July and August strikes at Kiev, Odessa, Baku, Tiflis, Rostov, Nikolaev, and other towns throw 500,000 men out of employment. The strikes are suppressed by the military with the loss of hundreds of lives.
In June in Finland the sale of guns, ammunition, and explosives is practically prohibited.
(See, also, CHINA, JAPAN, and TURKEY.)
1904. June 16, Bobrikov, governor-general of Finland, is mortally wounded by an assassin as a protest against Russian rule. In November the Czar reconvenes the Finnish Diet; four exiled members return.
July 28, de Plehve, minister of the interior and an extreme reactionist, is assassinated. Prince Sviatopolk Mirsky succeeds him in September, and adopts a more liberal policy.
August 12, a son is born to the Czar.
In October an agreement with Germany allows the withdrawal of many troops from the German frontier for service in the Far East.
November 19, the **Zemstvo Conference,** in session at St. Petersburg, signs a memorial to the Czar asking for various concessions, including a constitution. Intense excitement results. December 25, the Czar replies, ordering certain legal reforms, but declaring that the autocracy will be kept unimpaired.
The year is one of marked internal disturbance and revolutionary activity. The mobilization of troops causes disorder and distress, and industries suffer from the war. (See JAPAN.)
1905. The country is in a condition of upheaval the entire year. Serious trouble occurs on Sunday, January 22, when troops in St. Petersburg fire upon strikers who are marching to the Winter Palace under leadership of Father Gapon to petition the Czar for reforms. Many **hundreds of unarmed men, women, and children are killed.** The massacre has far-reaching effects; as strikes and riots spread to other cities, as Moscow, Kovno, Radom, Vilno, Saratov, Narva, etc. Procurator General Soininen of Finland is killed, February 6. February 17, Grand Duke Sergius, uncle of the Czar, is assassinated in Moscow. These events have some effect on the authorities, and in April an extension of the zemstvo system is granted, and soon after concessions are made to the Jews and Poles. May 5, a **congress of zemstvoists** in Moscow **declares for universal suffrage.** June 28, the **battleship** *Kniaz Potemkin* **is seized** by its crew, who murder their officers. After sailing to Odessa and various other Black Sea ports, they leave the vessel at Küstenje, a Roumanian port. Mutinies on various other ships are quelled. August 19, a manifesto is issued containing provisions for the regulation of the **national Duma, to meet in January,** 1906, the powers of which, although much increased, are still very limited. This manifesto is accepted by the conservative reformers as a first step, but the revolutionary party demands an assembly elected by direct and universal suffrage with much larger powers. As a means to bring this about, a strike is organized in the large cities during the last week in October. Railway communication with St. Petersburg is cut off, and industrial Russia threatened with paralysis.
Count Witte persuades the Czar to grant concessions, and on October 30 a manifesto is issued extending the power of the Duma and promising "freedom of conscience, speech, union, and association." It also promises that no law shall come into force without approval of the Duma. It does not grant *habeas corpus* nor constitutional government, and keeps from the Duma all control of army and navy. This is followed by the resignation of the reactionary ministry and the appointment of a cabinet with Count Witte as premier. November 4, a **revolt in Finland** results in the issuance of a **manifesto restoring to Finland her constitutional rights** and summoning the Finnish Senate. Later occur terrible **massacres of the Jews in Odessa** and other cities, perhaps organized by the reactionaries in an effort to overthrow the new *régime*. On the other hand, as a constitution is not granted, the revolutionary party still consider that the reforms are not liberal enough, and organize further strikes. At the close of the year the situation is very grave, especially in Poland and Lithuania, where complete independence is sought. December 21, a general strike is called throughout the empire, but is gradually suppressed with much severity by the military power.
1906. January 22, the anniversary of "Red Sunday" passes quietly, despite repeated rumors that a general strike would occur.
January 26, a serious mutiny breaks out among the reservists at Vladivostok, but is quelled by General Mishenko's Cossacks.
January and February, rioting is prevalent in the Baltic provinces. Many estates looted and *châteaux* destroyed. Severest measures of repression employed, and thousands are killed. In April a **new election law is granted to Finland,** assuring a larger degree of home rule.
May 2, Count **Witte resigns** as premier, and on May 7, Goremykin is appointed premier. The Czar proclaims **new "fundamental laws"** which the Duma must not alter, thus greatly restricting the latter's power.
May 10, the Czar opens the sessions of the Council of the Empire and the Duma. Muromtsev is elected president of the Duma. May 17, the **Duma demands amnesty for political prisoners, freedom of the press,** of speech, and of meeting, the abolition of the Council of the Empire, a responsible ministry, and the expropriation of large land holdings for the benefit of the peasantry.
June 15, a savage massacre of Jews occurs at Bialystok, and an investigating committee of the Duma report that it was instigated by government officials.
June. Serious riots occur during the month at Sebastopol, at Krasnoyarsk, and other places.
July 22, Czar **dissolves Duma.** Goremykin is removed as premier and Stolypin is appointed. Great excitement prevails.
July 23, many members of Duma meet at Viborg, Finland, and issue manifesto urging Russian people to refuse to pay taxes or submit to conscription until the Parliament is again given power.
July 31, **garrison of Sveaborg,** chiefly artillery, **mutinies,** but is subdued by fire from war vessels and shore batteries. After several hundred are killed the survivors surrender, August 2. A simultaneous mutiny of troops at Kronstadt is suppressed with great severity, and an attempted mutiny on the fleet fails.
August 25, a bomb is thrown into the residence of Premier Stolypin during a reception, killing 27 and wounding 34.
September 8–9, a great massacre of Jews occurs at Syedlets, Poland.
1907. On January 3 General van der Launits, prefect of St. Petersburg, and on January 9 General Pavlov, chief military public prosecutor, are assassinated by agents of the Terrorists.
In January an unusually large number of political assassinations, chiefly of high police officials, occur.
March 5, the **second Russian Duma** is opened. Golovin, a Constitutional Democrat, is elected president.
June 15, Duma is dissolved by the Czar's edict, after accomplishing practically nothing.
June 24, many members of the dissolved Duma meet at Viborg and issue a manifesto to the people, urging them not to pay taxes and to resist conscription in order to force the government to terms. On December 31, 167 of the signers of the manifesto are sentenced to brief terms of imprisonment for the act.
August 3, an alliance with England to guard the Indian frontier as at present delimited is announced. The Czar meets Emperor William, of Germany, at Swinemünde.
November 14, the third Duma meets, having been elected under such severe restrictions of the suffrage that the "Monarchists" and "Octobrists" are in a majority. Khomyakov is elected president.
1908. February 12, the Finnish Diet reassembles, having been suspended several years by the Czar. Three days later the Finnish governor is replaced by a Russian.
February 20, at St. Petersburg **the court-martial** on the defense of Port Arthur **condemns General Stössel** to death, with the recommendation (later accepted) of commutation to ten years' imprisonment. It reprimands General Fock and acquits Generals Smirnov and Reiss.
February 26, the **Duma is received by the Czar,** who urges certain measures. March 15, the Minister of Justice asks an appropriation of $1,000,000 in order to enlarge the prisons.
May 19, internal loans of $400,000,000 are announced for army reorganization and railway construction.
May 22, the president and many members of the Duma are arrested and confined in prison until August 24, when they are released.
June 8, the Czar and Edward VII. meet at Reval.
June 17, the Duma officially censures the Minister of Finance for negotiating a loan without its consent.
June 17, the Council of the Empire votes the battleship bill which had been rejected by the Duma.

1908. July 2,300 miners are killed in an explosion of gas in the Kovski mines.
September 4, the Czar issues an edict, ordering all university professors to withdraw from opposition political parties.
September 11, the eightieth birthday of Tolstoy is celebrated.
Outbreak of cholera in September: 1,000 new cases are reported daily.
December 6, government loan of $250,000,000 is approved by the Duma.
December 16, Khomyakov, president of the Duma, resigns because of criticism of his conduct made from the floor.
December 30, the Duma unanimously rejects a ministerial bill which introduces new regulations in land sales in Baku.
1909. January 18, forty new cases of cholera in St. Petersburg.
January 31, **Lopukhin,** a former director of police, **is arrested** on charge of high treason. Two days afterward the opposition leaders in the Duma sharply attack the government for this arrest.
February 22, an order from the Czar dissolves the Finnish Diet.
April 1, the Duma votes an additional appropriation of $22,000,000 for the army budget.
May 4, Russia decides to dismantle her forts on the Polish frontier.
May 10, the Czar refuses to accept the resignation of the cabinet.
May 28, the Duma legalizes the sect of the Old Believers.
July 8–10, the bicentenary of the battle of Poltava is celebrated with great pomp, the Emperor assisting.

SAN MARINO.

San Marino is an independent Republic with a population in 1906 of 1,439 and an area of 38 square miles, situated in the northeast part of Italy. It has existed for over a thousand years. It has a legislature, made up of the Grand Council of sixty members and of another Council of twelve members. Two of the Grand Councilors are appointed every six months to act as Regents and exercise executive functions. The little army consists of 950 men and 38 officers. The State has no public debt. Agriculture is the main occupation of the people. On June 28, 1907, a treaty of friendship was concluded with Italy.

SANTO DOMINGO.

The Republic of Santo Domingo occupies the middle and eastern part of the Island called Santo Domingo or Haiti. The separation from the western part came in 1844 when the eastern or Spanish regions were able to set up a government of their own under the name of the Dominican Republic, with General Pedro Santana as its head. Resigning four years afterward and being succeeded by General Zimenes, he was obliged to retake command on account of the inefficiency of his successor. In two wars he defeated Soulouque, the Haitian general. After a Spanish occupation and a period of semi-anarchy, Baez, the president, negotiated treaties with President Grant of the United States, contemplating the annexation of Santo Domingo and the cession of Samana Bay to the United States. The American Senate refused to ratify this treaty and Baez was banished. General Ulisses Heureux was assassinated in 1899 after a presidency of thirteen years. The civil strife between various pretenders caused the intervention of the United States in 1904. In 1905 a protocol with the United States was signed, according to which an American commissioner should collect the revenues and hold 55 per cent for foreign creditors. This was ratified by the American Senate in March, 1907, and by the Dominican Congress in the following May. The republic now enjoys a measure of quiet.

Government. An electoral college chooses the president for a term of six years. A constitution, proclaimed in 1908, provides for a Senate of 12 members and a House of Representatives of 24 members. A Ministry, appointed by the President, has charge of administration.

Industry and Labor. In 1906 the crop of sugar, cocoa and bananas was larger than ever before. The investment of American capital has largely benefited the island.

Religion. All faiths are tolerated, but the state religion is Roman Catholic.

Education. There are primary, secondary, technical, and normal schools and a professional school.

Defense. The law provides for a force of 648 men. In the Rural Guard there are supposed to be 906. There is one gunboat.
The area is 18,945 square miles. The population is estimated at 610,000.

1844. The Revolution results in the formation of the Dominican Republic, which includes the eastern and Spanish-speaking portions of the island. The leader of the Dominicans, General Pedro **Santana, is elected president.**
1848. President Santana resigns and is succeeded by General Zimenes. The Republic is attacked by Haiti. Zimenes proves inefficient and Santana takes command of the army.
1849. The Haitians are completely defeated at Ocoa. Zimenes is deposed and Buenaventura Baez is made president.
1853. President Baez is succeeded by General Santana, who promptly exiles Baez.
1856. Haiti renews the war and is again defeated by General Santana.
1857. Santana becomes unpopular and is obliged to retire from the presidency. Baez is recalled from exile and made president.
1858. A revolution breaks out and Baez is deposed. Santana is again elected to office.
1861. In May, **Santana,** unable to maintain peace, **cedes Santo Domingo to Spain,** with certain provisos. The country, thus betrayed, revolts against the tyrannical acts of the Spanish officials.
1865. The Dominicans, led by José María Cabral, finally expel the Spanish troops from the country. The **constitution of 1844,** with certain changes, **is reaffirmed.** Baez again becomes president.
1866. Baez is deposed by Cabral, who succeeds to the office of president.
1868. Baez is again recalled to fill the office of president.
1869. Two treaties are negotiated with President Grant of the United States, one **contemplating the annexation of Santo Domingo to the United States,** and the other the cession of the Bay of Samana. The people approve the proposal, but the American Senate refuses to ratify the measure. The failure of the project leads to a revolution. Baez is banished and civil disorder ensues.
1886. General Ulisses Heureux becomes president.
1893. Constitution is modified to allow President Heureux to succeed himself.
1899. July 26, President Heureux is assassinated. General Juan Isidro Jiminez becomes president.
1902. President Jiminez is displaced by General Horacio Vasquez.
1903. A revolt begun early in 1903, by General Wos-y-Gil against President Vasquez, results in the overthrow of the latter in April, and the formal election in June of A. Wos-y-Gil as president. In November he is deposed by former President Jiminez.
1904. Early in the year American warships have to intervene in the civil difficulties. The revolution ends in June with Morales in power.
In July the American claim against the government is set by an international commission at $4,481,250. First installment is not paid, and the **United States takes possession of the customhouse at Porto Plata.** Germany and Spain protest against this as damaging to their claims.
1905. January 21, a protocol with the United States is signed. February 24, the assassination of President Morales is attempted. March 24, the representative powers agree on the appointment of an American commissioner to collect revenues and hold 55% for foreign creditors until the U. S. Senate acts. March 28, this proposition is accepted by President Roosevelt. It is still in force at the close of 1908, as the Senate postpones action. December 25, President Morales leaves the capital secretly. On the 27th Vice President Ramón Caceres is installed president.
1908. In June Caceres is elected president, and inaugurated July 1.

SERVIA.

Servia is situated in the northwestern part of the Balkan Peninsula. It has Bosnia on the west and Roumania and Bulgaria on the east. Its independence was recognized in the treaty of Berlin on July 13, 1878. Shortly afterward its ruler, Prince Milan, took the title of king. The Servians and Croatians settled the country in the fifth century. During the Middle Ages the kingdom fluctuated in importance, but at one time under the great Stephen Dushan it included the larger part of the peninsula. At the terrible battle of Kosovo in 1389 it was subjugated by the Turks. The Austrians acquired a part of Servia in 1718, but were forced to restore it to Turkey twenty-one years afterward at the treaty of Belgrade. An insurrection broke out in 1804 under the leadership of the swineherd Kara George, but he was subdued after nine years of fighting. Miloš Obrenović, more fortunate, extorted recognition from the Sultan in 1830 and the country became semi-independent. Except for the troubles with the Turks and an inglorious war with Bulgaria, Servian history during the last eighty years is largely made up of the bloody rivalry of the Karageorgevićs and Obrenovićs. The latter family was exterminated in 1903 and Peter Karageorgević now occupies the throne.

Government. The constitution of 1889, repealed in 1894 and restored in 1903, is still in force. The king is the executive. He also exercises legislative authority conjointly with the National Assembly or Skupshtina. This body of 160 members is chosen by popular election. The King is assisted by a State Council and by the Ministers of Foreign Affairs; Instruction and Worship; Interior; War; Finance; Public Works; Commerce; Agriculture; and Industry; and Justice.

Industry and Labor. The occupation is mainly agricultural. Cattle, sheep and hogs are raised. Mining resources are large but undeveloped. The government specially favors industrial enterprise.

Religion and Education. Ninety-eight per cent of the people belong to the Eastern Orthodox Church. One half the remainder are Mussulmans. Primary education is free and, by law, compulsory. There are about 1,300 elementary schools and a few higher schools. The University of Belgrade, founded in 1838, has 780 students. Only about one sixth of the inhabitants are able to read and write.

Defense. All Servians are liable to military service from 18 to 50 years of age. The peace strength of the army in 1908 was 37,443 men of all grades.
The area is 18,650 square miles. The population in 1905 was 2,688,025.

1804. Under Kara George, founder of the Karageorgević family, **the Servians rise against the Turks.**
1813. The Servian rebellion seems crushed.
1830. Miloš Obrenović, founder of the Obrenović family, after fighting the Turks fifteen years and assassinating Kara George, whose head he sends to the Sultan, is recognized by the Porte as Prince of Servia, which is made an autonomous province.
1839. Forced abdication of Miloš. His son Michael succeeds.
1842. Michael deposed and replaced by Alexander, son of Kara George.
1858. Alexander deposed and Miloš recalled.
1860. Miloš dies, and is succeeded by his son Michael, who is assassinated in 1868, and is succeeded by Milan, a minor.
1869. July 11, a **constitution is proclaimed.**
1876. July 1, the Servian troops cross the frontier to attack Turkey, but are crushed at Aleksinac, October 31.
1878. July 13, the independence of Servia is recognized by the Congress of Berlin.
1882. Servia declares itself a kingdom.
1885. November, Servia, attacking Bulgaria, **is decisively defeated** at the battle of Slivnica, November 17–19.
1899. A new constitution is granted. Milan abdicates (March 6) in favor of his son Alexander.
1894. May, Alexander by *coup d'état* restores the constitution of 1869.
1903. June 11, army officers assassinate King Alexander and Queen Draga, together with the prime minister, the minister of war, and two brothers of the Queen. The Obrenović family is extinct.
June 15, Peter Karageorgević, grandson of Kara George, is elected king.
1908. In October the Servians are feverishly excited by the action of Austria-Hungary in annexing Bosnia and Herzegovina and by the proclamation of Bulgarian independence. The Crown Prince George makes violent speeches, but the government restrains the people and awaits the action of the powers.

1909. January 16, the cabinet resigns for the third time within a fortnight. March 18, Great Britain, France, and Russia demand that Servia enter upon peaceable negotiations with Austria-Hungary. March 25, Crown Prince George resigns his right to the succession in favor of his brother Alexander. March 30, Servia accepts the proposals of the powers, thus ending the political crisis.

SIAM.

THE kingdom of SIAM is ancient, having a history reaching back to the early years of the Christian era. The city of Lapong is said to have been founded in 575 A. D. Before this time, Siam is said to have been under the dominion of Cambodia. There are inscriptions antedating the close of the thirteenth century, in which the boundaries of the country are declared.

When at the close of the dark ages European travelers first visited the East, the court of the king of Siam attracted their presence with its splendor and renown. Gradually the influence of Cambodia was destroyed, though the conflict extended through about 400 years. During the eighteenth century, warfare was made upon the so-called Lao states on the north and northeast, and Siamese supremacy was established in these countries. The great cities of Luang Prabang and Wieng-chang were transferred to Siam in 1828. Meanwhile trade intercourse had sprung up between the kingdom and several of the Western nations. Commercial relations were begun with France as early as the close of the sixteenth century. About the same time similar relations were established by the Japanese. The Dutch traders visited Siam, and in 1752 trade was opened with Ceylon.

The present dynasty of Siamese rulers was established in 1782, when the capital was transferred to Bangkok by the successful general Phaya Chakkri, who, in 1792, invaded Tenasserim, which was held by the Siamese for about thirty years. In 1856, a treaty with Great Britain was negotiated by Sir John Bowring, by the terms of which Siam was more than ever opened to foreign residence. The conditions of trade were made conformable to the usages of civilized nations.

The recent rulers of the kingdom have shown breadth of view and attainments. The reign of Maka Mongkut extended from 1852 to 1868. In the latter year he was succeeded by his eldest son, Chulalongkorn I., whose long reign has been marked by a broad policy that has attracted the attention of the Western peoples. The great misfortune of the kingdom is its weak geographical position, as Siam is wedged between British and French possessions in the East and both Great Britain and France occasionally "rectify" the frontier. The last "rectification" by France took in 1907 about 7,000 square miles from Siam, another "rectification" by Great Britain took in 1908 an equally large area. By the treaty of Bangkok, March 10, 1909, Siam further ceded to Great Britain an additional area of 15,000 square miles.

The government of Siam is a hereditary monarchy, in which the executive power is vested in the king assisted by a cabinet of nine members. The ministers, however, are nearly all the king's half brothers, or sons. In 1895, the council of state was succeeded by a Legislative Council with a membership of forty-one. For purposes of local government Siam is divided into eighteen provinces, each having a governor appointed by the king.

The religion of the Siamese is Buddhism. Very little influence upon the popular faith and practice has been exerted by foreign intercourse. A few young men have been sent to foreign institutions of learning. Education is in a backward state. In Bangkok there are 3 Anglo-vernacular schools, 6 secondary schools which teach English, 60 primary schools, 2 normal schools, a medical and a civil service college, and 5 schools for girls. Public instruction is almost wholly in the hands of the priests. Bangkok was greatly injured by fire in 1907.

The area of Siam is about 190,000 square miles. An incomplete census, taken in 1904, gives the population as 6,686,846.

SPAIN.

THE history of SPAIN falls naturally into three periods. In the first, the Spanish states stood for centuries as the outpost which in constant warfare defended Christendom against the perpetual assault of the Moors, who were the advance wave of the Mussulman power. That Europe was not submerged by an Asiatic type of religion and government was largely due to the tenacious and heroic resistance of Spain. When she emerged in final triumph, a consolidated power under Ferdinand and Isabella controlling most of the Peninsula, the age-long struggle had stamped ineffaceably certain characteristics upon her people. Of all European nations, Spain was the most intensely Catholic, military, and monarchical.

In the age of geographical discovery and religious reformation, Spain played a twofold and mighty part. She subjugated a large portion of the New World, and established a colonial empire, in which the motives, the agencies, and the results were all strangely commingled. With daring and ruthless conquerors like Pizarro and Cortes went benevolent and large-souled men like Las Casas. Too often religious zeal became cruel bigotry, and ambition narrowed into avarice. The enslavement of the native Americans was checked only to give place to wholesale man-stealing from Africa. Yet, wide as was the misery inflicted by Spanish dominion, it planted the roots, in race and institutions, of whatever civilization exists to-day in fact or in promise in Mexico and her sister republics of the southern portion of the New World.

One effect of the wealth drawn by Spain from America was to multiply the material force she threw into the service of the old religion, which was now struggling desperately with its young rival. Protestantism gained no foothold in Spain; the Inquisition had there its stronghold; Catholicism blazed out afresh in such types as the aggressive fervor of Loyola and the ecstatic visions of Saint Theresa. The nation spent its strength in a vain attempt to crush the sturdy heretics of the Netherlands and of England. In this same period Spain played once more her old part; the Spanish ships were the strength of the fleet that won the battle of Lepanto (1571), and saved Europe from the Ottomans. And, in the somber emergence into the modern age, for which its resources and traditions were all unfit, the spent chivalry of Spain received its obsequy at the hands of Cervantes in one of the noblest of imaginative works. The Spanish peasant to-day knows his Don Quixote; and that story, in its truth to nature, its heroism under mask of humor, its broad humanity with essentially Spanish coloring, might be regarded as a link between the nation's past and a future yet to be. To that Modern History with which we are here chiefly concerned belongs the third period of Spanish history, a period largely of degeneracy, its events often little more than moves on the European chessboard of war, diplomacy, and dynastic ambition.

The unprecedented conditions under which the Emperor Charles V. came to a sovereignty which seemed to include the greater part of the European nations, promised, in the early part of the sixteenth century, the complete consolidation of Spain and the German Empire. The promise was utterly defeated by his abdication and death. The imperial dignity went back to the House of Hapsburg, while, for a period of forty years, dating from the death of Charles V., his son Philip II. ruled in Spain. It was during this period that that kingdom receded from its proud rank as one of the leading powers of Europe to the place, first of a second-rate, and then of a third-rate monarchy.

After the death of Philip, the crown went in right line of descent to his son Philip III., and afterward to his grandson Philip IV. It was in the reign of the latter, extending from 1621 to 1665, that the Thirty Years' War was fought out to its legitimate conclusion and settlement by the Peace of Westphalia. It was at this time also that the antecedents were prepared of that conflict at the beginning of the eighteenth century, known as the War of the Spanish Succession.

Philip IV., in 1665, bequeathed his crown to his son Charles II. The elder sister of Charles was Maria Theresa, who was married to Louis XIV. of France, and Charles's younger sister was Margaret Theresa, who was married to the Emperor Leopold I. of Austria. The Spanish king, weak and purposeless, was childless. In this fact lay the germ of contention. Should the crown depart from the family of Charles it must go collaterally either to a French Bourbon or to an Austrian prince.

Meanwhile the Spanish kingdom was in a state of sore distress. All of the elements of discord were loosed. The treasury was bankrupt. The army was virtually disorganized. The social state had fallen into decay. A terrible famine had come; and earthquakes and volcanoes completed the devastation. The disintegration of the kingdom which seemed to impend was watched with satisfaction by both Louis XIV. and the Emperor Leopold. While both disclaimed the purpose of seizing Spain, each desired to do so, and sought the opportunity. The Emperor coveted the Spanish crown for his second son, the Archduke Charles; and Louis XIV. sought to secure the same for his grandson, Philip of Anjou.

The invalid Charles II. made wills and codicils and counter wills, but *finally* disposed of the crown by deciding in favor of the Duke of Anjou. Thus, in the year 1700, the rights of the rival claimants, Philip and the Archduke Charles, came to the arbitrament of the sword, and the war of the Spanish Succession ensued. Most of the European rulers acknowledged Philip V. as king of Spain, but Prince Eugene appeared in the field as general of the Empire, and soon showed himself as a successful competitor for the military honors of Europe.

The events of the war, in which England was soon involved, and which called forth the genius of Marlborough, need not be here recapitulated. In August of 1704, the great battle of Blenheim was fought with results most disastrous to the French and their Bavarian allies. On August 16, 1705, Prince Eugene was defeated by the French under Vendôme in the battle of Cassano, and in May, Marlborough won the bloody battle of Ramillies. In 1708, the same great commander and Prince Eugene gained a decisive victory at Oudenarde, and in September of the following year, they again triumphed in the battle of Malplaquet. Still the war dragged on. But in April of 1711, Joseph I. of Austria died, and the way was thus opened for the succession of his brother the Archduke Charles to the imperial dignity. One of the claimants to the Spanish crown was thus removed.

This completely changed the aspect of the field. The way was cleared for the general recognition of Philip of Anjou as king of Spain. The menace to the balance of power from Philip's recognition had now become less serious than would be the recognition of the Austrian Emperor. The result was the conclusion, in 1713, of the Treaty of Utrecht, which, though it brought pacification, could not restore prosperity to the Spanish dominions. Indeed the recognition of Philip was, as it were, purchased with the cession, by that Prince, of Naples, Sardinia, Parma, Milan, and the remainder of the Spanish Netherlands, to Austria; Sicily to Savoy; and Gibraltar and Minorca to England.

The reign of Philip V. was marked by a serious decline of constitutional rights in the Spanish kingdom. The residue of the old liberties of Aragon, Valencia, and Catalonia was no longer recognized. Meanwhile the ambitious queen, Elizabeth Farnese, and her conspiring minister, Cardinal Alberoni, usurped the authority of the state, and that condition of political decay became apparent, which has ever since prevailed in the Spanish kingdom. On Philip's death, in 1746, the crown passed to his son Ferdinand VI., who held the throne until 1759; but his reign was little more than nominal. A peculiar melancholy, amounting to mental disease, disqualified the monarch for taking any rational part in the conduct of the government. In the meantime, Naples had been recovered for Spain in 1735 by the energy of the Infante Carlos, stepbrother of Ferdinand VI., who became his successor, with the title of Charles III. Being already king of Naples he brought that dominion with him. He also added character to the Spanish throne, and a period of revival ensued which seemed to promise better times for the nation.

In 1761, Charles III., acting for Spain, entered into the family compact made by the Bourbon Princes of Europe, and in this relation he involved his kingdom, as an ally of France, in that conflict, which, beginning in America in 1755, was terminated by the Treaty of Paris in February, 1763. The arms of Spain, however, were not again distinguished in the military affairs of Europe. Though the reign of Charles III., extending to 1778, was supported by a number of capable statesmen, and though commerce, agriculture, and the arts showed symptoms of revival, and though there was a considerable increase in the population of the kingdom, there was little substantial and permanent gain. One of the notable events of the reign was the expulsion of the Jesuits from the Spanish dominions, in 1767. The most important advantage which was gained, however, was the enlargement of the territorial dominions of the kingdom by the addition of Minorca in the Mediterranean, and of Louisiana and Florida in America.

On the death of Charles III. in 1788, the crown was transmitted to his son, Charles IV., who at first showed a disposition to emulate the political virtues of his father. But after a few years he yielded himself an easy prey to the mastery of his minister, Manuel Godoy, Duke of Alcudia, the so-called "Prince of the Peace." Such was the governmental situation at the outbreak of the French Revolution. At first Godoy opposed the revolutionary Republic of France, but in 1796 he made with that government the league of San Ildefonso. Subsequently, for a period of about ten years, the destinies of the kingdom swayed back and forth as the fortunes of France rose or fell, until the dependence of Spain upon the Napoleonic Empire became absolute and nationality was for a season virtually extinguished.

At the conference of Bayonne, in 1808, the French Emperor induced Ferdinand VII. and the Infantes, Don Carlos and Don Antonio, to resign their claims to the Spanish throne, and calling a Junta of 150 members he secured the crown for his brother Joseph Bonaparte, whom he entitled King of Spain and India. By these measures the independence of Spain was for the time swept away.

A French and an English party appeared in the kingdom, the one supported by Napoleon's marshals and the other by Wellington. The effort of England and her European allies was henceforth directed to the restoration of the Bourbon House. This had been effected indeed, temporarily, in March of 1808, when the Prince of Asturias secured the throne of Ferdinand VII.

In this period the best patriotism of the people rallied round their native prince, as representing at least their national rights as against the usurpation of France. In Spain, as in Germany, the cause championed by absolutist monarchs was ennobled as it became the cause of nationality against foreign tyranny. The Spaniards gave a more or less effective support to Wellington in his long and at last successful struggle with Napoleon's marshals.

In 1814, when the French Emperor was hard pressed, he agreed to recognize Ferdinand on condition that he take an oath to support the reformed constitution. This promise was not fulfilled, and after Waterloo there was none to enforce it. Ferdinand became as arbitrary as he would. Even with this the absolutists were not satisfied and would fain place the king's brother, Don Carlos, on the throne. Thus came the Carlist insurrections of 1825-26.

At this juncture it became necessary to set aside the Salic Law, in order that the succession might be confirmed to the king's daughter, the Infanta Isabel. This was effected by the agency of the queen, who became regent on the king's death, in 1833. Don Carlos was still supported in certain provinces, but the alliance of England secured the triumph of the Royalist party, and the fortunes of the Carlist faction waned more and more. Maria Christina resigned the regency in 1840, and in the following year Duke Espartero took her place. This statesman showed himself to be progressive and able. He served the princess Isabel faithfully until, in 1843, she became queen in fact, and until her rights were recognized throughout the kingdom.

The reign of Isabella II. extended from her accession at the age of thirteen to her deposition in 1868. For two years after her flight she held a precarious claim to the throne, but in June of 1870 she made a formal abdication in favor of her son, Alfonso Francisco, who took the title of Alfonso XII. For six troubled years Spain was a republic. Then in 1874 Alfonso was called to the throne. He died in 1885. Six months afterward his widowed queen, Maria Christina, gave birth to a son, Alfonso XIII. There is nothing finer in history than the judicious and assiduous devotion, during her long regency, of the queen mother to her son. Alfonso was declared of age in 1902 and is the present sovereign.

Government. The government of Spain is a hereditary constitutional monarchy, though the limitations on the prerogative are not distinctly defined or always effectual. Spain has a written constitution dating from 1876. The instrument, consisting of eighty-nine articles, defines the government as a constitutional monarchy; the executive authority is vested in the king exclusively, and the legislative authority in the Cortes *and* the king.

The Cortes is a double body consisting of a Senate and Congress; the two houses are of correlative or equal authority. Of the Senators there are three classes: first, senators by their own right; secondly, senators of life tenure (nominated by the crown); thirdly, senators elected by corporations of state. The first group includes princes and grandees, Captains General of the army, Admirals of the navy, the Patriarch of the Indias, Archbishops, Presidents of the Council of State, and a few other official dignitaries, but must not exceed eighty in number. There are one hundred Crown Senators. The third division, comprising one hundred and eighty senators, is composed of those who are chosen by the communal and provincial states of the church, by the Universities and Academies, and by the largest payers of contributions.

The Congress or popular body is an elective assembly having one member apportioned to every fifty thousand of the inhabitants. The electors must be twenty-five years of age, having full civil rights and antecedent citizenship of some municipality for a period of two years. Ten members of Congress may be chosen as representatives at large, provided each shall have received a cumulative vote of ten thousand. There are in all 406 deputies, of whom ninety-eight may be chosen in twenty-six of the large districts on the principle of minority representation.

The Executive includes under the monarch a council of nine Ministers, as follows: President of the Council; Minister of Foreign Affairs; of Justice; Finance; Interior; War; Marine; Agriculture and Commerce and Public Works; Education.

Industry and Labor. Since the beginning of the seventeenth century the industries as well as the political influence of Spain have almost constantly declined. The same causes which produced the social paralysis of the Spanish nation brought also a cessation of enterprise. The decline in commercial and manufacturing interests was more than commensurate with that in population. Though Spain is naturally one of the most favored countries in Europe, her industrial condition is least promising. Spanish agriculture is carried on with the unprogressive methods of the eighteenth century. Only recently has the production of wheat been sufficient to create an export trade. Wine and oil have been staple for several centuries. The provinces of Biscay, Navarre, and Aragon are the best parts of the kingdom agriculturally considered, though the provinces of Granada, Murcia, and Valencia are richer in fruits, vegetables, and plants. About 79 per cent of the soil is classed as productive.

One of the drawbacks on agricultural development has been the favor shown to the *mestas* or proprietors of the sheep ranches. Fine wool, being the leading product of Spain since the Middle Ages, has attracted the patronage of government to the discouragement of agriculture. The silk interest ranks next to that of wool. This industry has been greatly improved and the excellence of both fiber and fabric is recognized throughout the world. The cotton industry, employing about 68,000 looms, has its center in the Catalonian provinces.

The commercial conditions of Spain are imperfect and discouraging. The railways of the kingdom extend to about nine thousand miles of track. The means of transportation are insufficient, and trade is carried on in a dull and listless manner. The canals are better relatively than the railways, though some of these have not been completed, and many are out of repair. The greater part of the foreign trade of Spain is carried on with Great Britain, France, and the United States.

The condition of Spanish labor is deplorable. Perhaps in no other part of Europe are the farmers so poor and comfortless. Even they who are landowners have their properties so mortgaged and otherwise involved in debt that prosperity with them is impossible. The annual crops are usually mortgaged before they are harvested and frequently before they are produced. The keepers of the merino sheep ranches in transferring their flocks from ranch to ranch have the privilege of transit, and the growing crops are frequently trodden down by the passing herds. Against such abuses the producers are defenseless. Under such conditions Spain has but a feeble claim to be regarded as an industrial nation.

Religion. The religion of Spain is the Roman Catholic. To this faith almost the entire population adheres. The Protestant following in the kingdom numbers nearly 7,000; avowed rationalists and freethinkers, about 10,000; Jews, 4,000. The religious establishment is more predominant in Spain than in any other European nation of like rank and influence. There are 3,253 religious orders. 2,656 are for women and 597 for men, some for charity, some for contemplation, some for education. The nuns number more than 40,000; the monks more than 10,000. A law was proposed in 1906 to regulate these orders, but it remained in the initial stages. Other elements of religious society are correspondingly numerous and universal. Other religions are nominally tolerated, but their worship must be in private.

Education. Spain was at an early date one of the foremost European states in the matter of education. Her universities, in particular that of Salamanca, were ancient and reputable. Spain, under the Moors, was the best educational seat in Europe. The spirit of Moorish art and learning was transfused somewhat into the Christian states. After the close of the Middle Ages, however, this educational preëminence was lost; the Spanish institutions of learning receded to the second or third rank. Medieval methods long prevailed as against the rising scientific spirit until, at the middle of the nineteenth century, Spain, on the score of illiteracy, had become one of the most backward states of Christendom.

Until 1857, no general system of primary education was established. In that year, a sweeping educational enactment was made on the compulsory plan, but it has never been well enforced. A supplementary act was passed in 1881. The state is divided into ten educational districts. These generally have universities as their centers. The revenues are derived mostly from municipalities. The expenditure for educational purposes is about five million dollars per annum. The system is administered under direction of a Director General of Public Instruction, who is at the head of a Bureau in the department of Public Works. A drastic law was passed in 1902 for the regulation of private schools.

Defense. Every Spaniard past the age of nineteen is liable to be drawn for three years in the permanent army, followed by three years in the first reserve and six years in the second reserve; or he may be assigned to the colonial army for four years of active service and four in the reserve. The usual annual contingent of recruits is 80,000. The strength of the regular army in Spain is assumed to be about 90,000 men in time of peace, and double that number in war. In theory, nearly 1,000,000 troops can be mobilized in case of extremity. But the discrepancy between the military resources of Spain on paper and in actuality baffles all exact computation. The Spanish navy was formerly relatively stronger than the army, yet the only vessels to be considered at all effective at present are 1 battleship, 2 armored cruisers, 6 protected cruisers, 5 destroyers and 6 torpedo boats. One protected cruiser is being built.

The frontiers of Spain are defended with fortifications of various kinds. These exist on the northwest coast at Fuenterrabia, the port of Pasajes, Santoña, Santander, Ferrol, Coruña, and Vigo. The Basque country is also defended with suitable fortresses, as are also the lines of the Ebro and Pamplona. The Mediterranean fortifications are still more important, of which the principal are those of Palamos, Barcelona, Tarragona, Málaga, Almeria, Carthagena, and Alicante. The Portuguese coast is also well defended; and Tarifa and Algeciras on the Strait of Gibraltar, and Cadiz at the entrance, may be regarded as first-class fortified stations.

The area is 190,050 square miles. The population is about 19,700,000.

SPANISH COLONIES.

Little remains to Spain of her once extended colonial empire except the Canary Islands and a few tracts of country like Rio de Oro and Adrar, lying south of the western frontier of Morocco along the coast, and the Rio Muni on the Gulf of Guinea and the island Fernado Po in the Gulf. They aggregate altogether about 80,000 square miles in area.

CANARY ISLANDS.

The Canaries consist of seven larger and several smaller islands. The principal are Tenerife, Palma, Fuerteventura and Ferro or Hiero. Their total area is about 2,850 square miles and in 1900 they had 358,564 inhabitants. They are mountainous, of volcanic origin, and their coasts rocky and precipitous. They are supposed to be the Fortunatæ Insulæ of the Romans. Unvisited by Europeans until near the end of the Middle Ages, most of them were subdued by the Norman, Jean de Béthencourt, a navigator and adventurer, early in the fifteenth century. The Kingdom of Castile acquired them from his successor. Many geographers formerly reckoned longitude from Ferro as from the original meridian, dividing east from west.

1659. The **Treaty of the Pyrenees** is concluded between Spain and France, by the terms of which Spain is obliged to cede to her opponent Artois, Roussillon, Cerdagne, and the Spanish fortresses in the Netherlands. The Pyrenees are fixed as the international boundary between the two kingdoms.
1665. **Philip IV.** dies, September 17. His son, **Charles II.,** succeeds him.
1672. Spain joins Austria in a **coalition against France.**
1675. Charles II. assumes the government and takes as his chief adviser his half brother, the prince Don John.
1679. By **Treaty of Nimeguen,** Spain surrenders Franche-Comté and her fortresses in Flanders. Charles II. marries Maria Louisa, niece of Louis XIV.
1698. The European powers make a **treaty of partition** concerning Spain, October 11, to take effect on the death of Charles II. With him the Spanish line of the Hapsburg family must end, he being childless. Louis XIV. has a claim to the inheritance as son of the elder daughter of Philip III. of Spain and husband of the elder daughter of Philip IV., although the inheritance has been renounced, while Leopold I. of Austria, the representative of the German line of Hapsburg, has a claim as son of the younger daughter of Philip III. and husband of the younger daughter of Philip IV., and, the right of inheritance having been reserved, the electoral prince of Bavaria claims superior title as great-grandson of Philip IV. and grandson of the younger sister of Charles II.
1699. Charles II. of Spain, not having been consulted in the treaty of partition made by the powers, makes the electoral prince of Bavaria his sole heir, but the prince dies, February 6.
1700. **A second treaty of partition** is made by the other powers on March 13. On November 1, Charles II. dies, after making **Philip of Anjou,** the

grandson of Louis of France, his heir; soon afterward Philip is proclaimed as Philip V.

1701. On September 7, a **grand alliance** is formed by the naval powers and the emperor, Leopold I. of Austria, in order to secure the Spanish Netherlands and the territories in Italy. France forms an alliance with the electors of Bavaria and Cologne, and with the dukes of Savoy and Mantua. Prussia, however, supports Leopold. In 1703 Savoy changes to the side of Austria. The troops of the alliance are led by **Prince Eugene,** of Savoy, chief of the Imperial army, and by Churchill, the English general, afterward the **Duke of Marlborough.** The war is fought almost entirely outside of Spain, — in Italy, Germany, and the Netherlands. In Spain the Duke of Anjou is recognized as king. Prince Eugene invades Italy with an Imperial force and defeats Catinat at Carpi and Villeroi at Chiari.

1702. Prince Eugene engages in a battle with Vendôme at Luzzara, but the result is indecisive. In the four years following, the **Italian campaign** is generally **favorable to the French.** (See FRANCE.)

1703. The Bavarians enter the Tyrol, but they are driven back. Prince Eugene moves on Germany by the Rhine frontier and an **invasion of the Spanish Netherlands** is made by Marlborough's army. The Archduke Charles of Austria enters Catalonia. The Imperialists are routed by the French and Bavarians at Höchstädt, September 20.

1704. The **English capture Gibraltar.** The **battle of Blenheim** is fought at Blindheim near Höchstädt, August 13, and the French and Bavarians are overwhelmed by the united forces of Marlborough and Prince Eugene.

1706. The Archduke Charles captures Madrid and occupies it for a short time. On May 23, Marlborough defeats the French at **Ramillies.** (See FRANCE.) Prince Eugene with the Prussians as allies routs the French at Turin, September 7. (See FRANCE.) Lombardy submits and Charles is proclaimed king of Spain as Charles III., at Milan, and the French are expelled from Italy. September 11, Eugene and Marlborough defeat the French at **Malplaquet.** (See FRANCE.)

1708. The allies again defeat the French at **Oudenarde,** July 11. (See FRANCE.)

1711. The emperor of Austria, Joseph I., dies, and the Archduke Charles succeeds him, whereupon the powers change their support from Charles to Philip of Anjou, the candidate of Louis XIV.

1712. A congress assembles at Utrecht to negotiate terms of peace.

1713. On April 13, the **peace of Utrecht** is made, by which Philip V., founder of the Spanish branch of the Bourbons, is recognized as king of Spain.

1714. A Spanish force with French allies captures Barcelona; the city loses its liberties. Philip V. espouses Elizabeth Farnese.

1717. **Alberoni,** the minister of Philip V., procures an invasion of Sardinia by Spanish troops. In 1718, Sicily is invaded. As a result of this policy England, France, Austria, and Holland form a **quadruple alliance** against Spain, and the Spanish fleet is overcome in a battle off Cape Passaro.

1719. A French army commanded by Berwick now moves against Spain, and Philip dismisses Alberoni.

1724. Philip V. abdicates the throne of Spain in favor of his son Luis, but on the death of the latter he resumes the sovereignty.

1725. Spain enters into an **alliance with Austria,** and a counter alliance is formed by **France, England, and Prussia.** In the following year Russia joins with Spain and Austria.

1729. A treaty of peace is signed with France and England at Seville.

1731. **Don Carlos,** the son of Philip V. and Elizabeth Farnese, on the ending of the male line of the Farnese family, receives Parma and Piacenza.

1738. Austria and France form a definitive treaty at Vienna, and a year later Spain accedes to the conditions of this peace.

1739. **War against Spain** is declared by **England;** Porto Bello is captured by Admiral Vernon.

1740. Spain claims a part of the territories of Austria on the death of Charles VI. and becomes involved in the **war of the Austrian succession.** (See GERMANY, AUSTRIA, and FRANCE.)

1741. Spain joins France in support of the claims of the elector Charles Albert, and in May concludes an alliance at Nymphenburg.

1744. The Spaniards with the French **defeat the Sardinians** near Coni. (See FRANCE and ITALY.)

1746. **Philip V.** dies and is succeeded by his son, **Ferdinand VI.**

1748. By the **peace of Aix-la-Chapelle,** which ends the war of the Austrian succession, Austria cedes Parma and Piacenza (seized in 1746) to Don Philip, the brother of Ferdinand VI.

1759. **Ferdinand VI.** is succeeded by his brother, **Charles III.,** as king of Spain, and Ferdinand IV., son of Charles, becomes king of the Two Sicilies.

1762. Spain becomes involved in the **Seven Years' War.** (See GERMANY). England declares war against Spain, and a force of Spanish soldiers makes a campaign against Portugal, the ally of England. In August, the **English capture Havana;** on November 3, preliminaries of peace are signed at Fontainebleau by Spain, France, England, and Portugal. (See FRANCE and ENGLAND.)

1763. The **peace of Paris,** signed by Spain, France, England, and Portugal, puts an end to the war. Spain cedes Florida to England and receives Louisiana from France.

1767. Under the guidance of his minister, Aranda, Charles III. decrees the **banishment of the Jesuits** from Spain.

1779. While Great Britain is involved in her war with the American colonies, **Spain declares war,** June 16, and unites with the French in a blockade of Gibraltar; in January of the following year the **Spanish fleet is defeated off Cape St. Vincent.** (See ENGLAND.)

1781. The Spaniards again bombard Gibraltar, without success; in alliance with France they make a third attempt in September of the following year, but this attempt also ends in failure.

1783. The **treaty of Versailles** declares the terms of peace for Great Britain, the United States, France, and Spain. Florida and Minorca are restored to Spain by England, September 3.

1788. Charles III. of Spain dies, September 13; he is succeeded by his son, Charles IV.

1800. **Spain cedes Louisiana to France.** (See FRANCE.)

1802. The peace of Amiens, March 27, between France and England, includes also Spain and the Batavian republic, the allies of France.

1808. **Charles IV.** of Spain is compelled, by risings among his subjects, to abdicate the throne; his son, **Ferdinand VII.,** becomes king, March 19. On March 23, Murat enters Madrid with a French army. Ferdinand VII. and Charles IV. confer with Napoleon at Bayonne, in May, and the father and son renounce the crown of Spain. In the same month a rebellion against the French domination occurs, but on June 6 **Napoleon** makes his brother, **Joseph, king of Spain and India.** The rebellion continues, and in July, Dupont surrenders his French command to the Spaniards at Baylen. Napoleon now presses the campaign in person and in December **Madrid capitulates** to his army. (See FRANCE and ENGLAND.)

1810. **Mexico** begins a **war for independence** from the Spanish sovereignty, under the leadership of Hidalgo. (See MEXICO.)

1811. Hidalgo is captured by the Spaniards and is executed; his successor, Morelos, shares a like fate in 1815. **New Granada, Venezuela,** and **Paraguay also rebel.** (See VENEZUELA, etc.)

1812. In January, **Wellington storms Ciudad Rodrigo,** captured by the French two years before. In March, the Spanish Cortes promulgates a liberal constitution. **Badajoz is stormed** by Wellington, in April, and on July 22 he defeats Marmont near **Salamanca;** in the following month the **English army enters Madrid.** Wellington fails, however, in a siege of **Burgos.** (See FRANCE and ENGLAND.)

1814. Ferdinand VII. annuls the constitution of the Cortes and enters Madrid, in May. By the congress of Vienna, June 9, 1815, **Spain is restored to the House of Bourbon.** By the act of the congress, Lucca is bestowed on the Spanish Infanta, Maria Louisa, and her son, Charles Louis, she being the heiress of the last duke of Parma.

1819. Spain makes a **treaty** with the **United States** for the **cession of Florida,** and two years later the territory is formally surrendered.

1820. An insurrection led by Riego breaks out in Spain; King Ferdinand is obliged to restore the constitution which he has abrogated.

1821. **Mexico becomes independent** through a revolution under **Iturbide** (see MEXICO); in the same year the colonies of Central America proclaim independence of Spanish rule. The Spanish power in Colombia, also, ends and the freedom of Peru is declared.

1822. The **liberal supporters** of the constitution in Spain are **victorious** over the conservatives, and a congress of the powers convenes at Verona to take measures for the suppression of the radicals.

1823. The Duke of Angoulême marches into Spain in order to restore the authority of the king; he enters Madrid in May. The Cortes thereupon withdraws to Cadiz, where an armed defense is made. In August, the French forces besiege the Trocadero and soon succeed in **overthrowing** the power of the **liberal party.**

1824. With the defeat of the Spaniards at Ayacucho, December 9, the **Spanish dominion in South America finally ends.**

1833. On September 29, **Ferdinand VII. dies;** his daughter, the Infanta Isabel, succeeds to the throne as **Isabella II.,** with Maria Christina as regent. An insurrection breaks out under the leadership of **Don Carlos,** the uncle of Isabella, who declares himself king of Spain. In May of the following year England, France, and Portugal unite in a treaty, by which the claims of the Carlists are condemned.

1836. A movement of the radicals results, in August, in an insurrection against the queen regent, Maria Christina, at the palace of La Granja; she is forced to swear allegiance to the constitution of 1812. The army under Espartero defeats the Carlists at Luchana, in December, and the siege of Bilbao is raised with the aid of English allies.

1837. Madrid is threatened by the Carlists, but they are forced to retire by Espartero; in 1838 his campaign against them is successful.

1839. Espartero now makes a convention with General Maroto, the leader of the Carlists, August 31, at Vergara. The **power of Don Carlos is broken** and he flees to France, September 13. In the following year the rebellion of the Carlists seems ended.

1840. The revolutionary spirit of the country breaks out again and Maria Christina withdraws from Spain, General **Espartero** assuming control of the government as her administrator, in October. In 1841, he is appointed **regent** by the Cortes.

1843. Narvaez incites a rising by which Espartero is deposed from the regency; the young queen, **Isabella II.,** is declared to be of age. In 1846 she **marries Francisco de Asis;** in the same year her sister, Louisa, weds the Duke de Montpensier, Louis Philippe's youngest son.

1854. A new revolution occurs in June, and in July Espartero is restored to power. Two years later he is succeeded by O'Donnell, who is attacked by insurrectionists and quells the insurgents with much severity, appearing as dictator at Madrid and Barcelona. In the same year O'Donnell resigns and is succeeded by Narvaez; the **whole country** is agitated with **outbreaks and insurrections.**

1859. A war against Morocco is declared by Spain, and in the following year Tetuan is compelled to capitulate, ending the war. The Carlists attempt a rising, but the movement fails.

1861. **Santo Domingo** is annexed to Spain, but is lost in 1865.

1864. Spain becomes involved in a **controversy with Peru;** and hostilities between the two countries ensue. (See PERU.)

1866. On January 3, a military insurrection occurs in Aranjuez, under the leadership of General **Juan Prim,** and on the following day martial law is proclaimed in the capital. Riots in Barcelona break out on January 9, and New Castile, Catalonia, and Aragon are declared to be in a state of siege, January 6 to 12. On January 20, Prim enters Portugal, lays down his arms, and the insurrection is ended.

1868. The revolution again begins, in September, under the direction of Prim and Serrano, and on September 28 the troops of the queen are defeated at Alcolea. **Isabella II. departs from Spain,** two days later, and the revolutionists under Serrano make their entry into Madrid, October 3. Serrano becomes president of a provisional government on October 8. An **insurrection** occurs in **Cuba.**

1869. A monarchy is decreed by the Spanish Cortes and **Serrano** is established as **regent,** in June. The efforts of the radicals are thwarted. On November 16 of the following year, **Prince Amadeus,** duke of Aosta and son of Victor Emmanuel, is **chosen king** by the Cortes; he accepts the kingship on December 4. General Prim is assailed by an assassin on December 28; he dies on December 30.

1872. The Carlists now rise in force and proclaim **Don Carlos** as **Charles VII.** of Spain. On February 11 of the next year, **Amadeus abdicates** the throne, and a **republican form of government** is instituted. Figueras becomes president of a ministry in which **Emilio Castelar** is made minister of foreign affairs.

1873. The Cortes proclaims **Spain a Federal Republic** on June 8; Margall is chosen president of the executive. In the same month revolutions occur in Andalusia and Valencia and much bloodshed is caused by the risings of the Internationals in Alcoy, July 10. On July 19, Salmeron is made the premier with a new cabinet. The next day the Carlists capture Igualada. On September 7, **Castelar** is elected **president** of the executive. The Carlists continue their operations and advance against Bilbao. A Spanish man-of-war captures the American steamship ***Virginius,*** October 31, but the vessel is surrendered in response to a demand from the United States.

1874. On January 3, Castelar resigns, and General Pavia executes a *coup*

d'état. **Serrano** again becomes the **chief of the government,** on January 4. Cartagena yields, January 12. The Carlists win a victory at Somorrostro, February 24; their siege of Bilbao is raised, May 2. Concha is defeated and mortally wounded in an attack on Estella, June 27. The son of Isabella II. is proclaimed king by the armies, December 29 and 30, as **Alfonso XII.;** a ministry for the regency is created, with Cánovas del Castillo at its head.

1875. Alfonso reaches Spain, January 9, and in March, Cabrera surrenders his Carlist army. In August the fortress of Seo de Urgel capitulates, and in the following month General Quesada expels the Carlists from their position before Pamplona.

1876. On February 19, Estella falls, and Don Carlos flees to France.

1878. The **revolt in Cuba is suppressed** in most of the island.

1880. In January the Cortes passes a measure for the **abolition of slavery in Cuba** within eight years.

1881. Cánovas del Castillo and his cabinet resign, and **Señor Sagasta** becomes premier, in February.

1883. Revolts of the military occur in August; the resignation of Sagasta follows in October. **Posada-Herrera** becomes prime minister.

1884. **Cánovas del Castillo** supplants Posada-Herrera, in January.

1885. **Alfonso XII.** dies, November 25, and his wife, **Christina,** becomes regent, with Sagasta as head of the administration. Spain is visited with disastrous earthquakes in January of this year.

1886. Christina bears a son who, under the regency of his mother, becomes, on May 17, king of Spain, with the title of **Alfonso XIII.**

1890. Sagasta resigns and Cánovas del Castillo again becomes premier.

1893. The **Cuban rebellion begins** with the insurrection of fifteen cities, November 3. On November 22, one hundred **anarchists** are arrested in Barcelona.

1895. On September 23 the independence of Cuba is proclaimed by the revolutionists headed by José Martí, Maximo Gomez, Antonio Maceo, and other patriots.

1896. On February 10, **Captain General Weyler** takes command of the Spanish forces in Cuba. A sanguinary conflict occurs in the island, on April 14, at Lechuza, in which the Spaniards are defeated with a loss of four hundred and fifty men killed, while the rebels have three hundred killed. In this year an insurrection breaks out in the **Philippine Islands.** On November 10, the Spaniards are again defeated in Cuba at Cavajabos, losing 2,000 men. On December 7, **Maceo** is ambushed and **slain.** The island is devastated by the Spanish army.

1897. The **United States** remonstrates with Spain on the excesses and cruelty of her course towards the Cuban revolutionists.

1898. Owing to the cruelty of the Spanish administration in Cuba and the anger excited by the blowing up of the battleship ***Maine*** in the harbor of Havana, war breaks out between Spain and the United States. The Cuban coast is blockaded by an American fleet under Commodores Sampson and Schley. A Spanish fleet in the harbor of **Manila,** capital of the Philippine Islands, is destroyed by the American fleet under Commodore Dewey, May 1. In Cuba the Spanish forces, under Captain General Blanco, are concentrated in Havana and Santiago. The fleet of Admiral Cervera reaches the West Indies in May, and is blockaded in the harbor of Santiago by Sampson and Schley. In June Cuba is invaded by the army of the United States, which proceeds to the investment of Santiago. On July 3 the Spanish squadron in Cuba is utterly destroyed by the American fleet, and General Toral, in command at **Santiago, surrenders** that city, together with the eastern part of the island and about 20,000 men, July 14, to General Shafter. A large American army under General Miles invades Porto Rico, July 25, capturing Guanica and Ponce. On August 12 **the war ends** with a protocol negotiated at Washington by the French minister, M. Jules Cambon.
The treaty of Paris follows in December, by which Spain withdraws from Cuba, cedes Porto Rico, the Philippines, and Guam to the United States, and receives $20,000,000 for improvements in the Philippines.

1899. **February 12, the Caroline, Pelew, and Ladrone islands, excepting** Guam, are ceded to Germany for about $4,000,000.

1902. Great disturbances in Barcelona, beginning among the metal workers, are ended, February 26, by calling out troops. Many deaths reported. May 17, **Alfonso XIII. is enthroned.** November 14, Sagasta forms new cabinet. November 17, ashes of Christopher Columbus, taken from Cuba in 1898, are deposited in Seville cathedral.

1903. A controversy between Conservatives, who favor army and navy expenditures, and Liberals, who favor economic reform, causes numerous cabinet changes. In June Marquis Villaverde, a Liberal, becomes premier, but in December another change takes place.

1904. Spanish Institute of Social Reform favors prohibition of bull fighting.

1905. The year is marked by numerous cabinet changes, the result of political unrest. Spain acts in accord with France on the Moroccan question. King Alfonso visits Paris in June and is received with great cordiality. M. Loubet makes a return visit in October.

1906. May 31, **Alfonso XIII. and Princess Victoria of Battenberg are married** with great splendor at Madrid. As they leave the cathedral an anarchist, Morales, throws a bomb at their carriage, killing sixteen bystanders and one of the carriage horses. He escapes, and on being arrested later in the country kills the arresting officer and himself.
November 28, Moret ministry resigns, and on December 4 new cabinet is formed, with Marquis de Armijo premier.

1907. January 24, cabinet under Marquis Armijo resigns. January 26, King Alfonso suspends Parliament. March 30, King Alfonso dissolves Parliament. May 10, crown prince Alfonso, Prince of Asturias, is born.

1908. January 14, the government pays $570,000 to the United States, thus settling in full indemnity claims from 1819 to 1834.
June 9, Spain negotiates an internal loan of $32,000,000.

1909. July 22, rioting occurs in Madrid over the sending of reinforcements to Morocco, where fighting with the Moors became severe on July 19. Beginning July 26, fierce rioting occurs at Barcelona, and on July 28 martial law is proclaimed throughout Spain.
October 13, Prof. Francisco Ferrer is executed at Barcelona after a trial under martial law, as an instigator of sedition. October 21, the ministry resigns, and Señor Moret is summoned to form a liberal ministry.

SWEDEN.

The prosperous condition of Sweden at the middle of the seventeenth century was attributable, so far as personal agencies were concerned, to the genius and patriotism of Count Axel Oxenstiern. This statesman as minister of Gustavus Adolphus took advantage of the absence of his sovereign during his long campaigns in Germany, Poland, and Russia to institute a strong and successful home government. He was engaged in carrying out domestic reforms when, in 1632, the battle of Lützen was fought in which Gustavus was slain.

By this catastrophe the Swedish crown succeeded to Christina, who was but six years of age. As regent for the princess, Oxenstiern continued his work, and such was his influence when the Peace of Westphalia was concluded that the kingdom of Sweden was territorially enlarged and politically promoted in rank and influence among the powers of Europe.

After the death of the great prime minister, however, the affairs of the kingdom under the scepter of the fickle and pleasure-seeking Christina were plunged into confusion with the accompaniment of financial distress and foreign complications. To these was added domestic discontent leading to the enforced abdication of the Queen, in 1654. Her successor was her cousin, Charles X. This brave and adventurous monarch bade fair for a season to stand as an heroic model between Gustavus Adolphus, who had preceded him, and his grandson, Charles XII. The king's reign covered a period of six years, yet in this brief interval he astonished Europe by his audacity. He it was who made the passage with his army across the Great Belt — a feat equal in its kind to that of Bonaparte at the Great St. Bernard. At this time Denmark was subordinated to the influence of Sweden. Charles XI., who succeeded to the throne in 1660, had not his father's warlike ambition. Until 1676 peace was maintained, but in that year a war was undertaken with the dukes of Brandenburg in alliance with Denmark. For a while the Swedes were hard pressed, but by the treaty of Fontainebleau they recovered what they had lost to Denmark.

It was in 1697 that the crown descended to the celebrated Charles XII. His career was one of the most erratic episodes in personal history. It was the fate of this remarkable ruler to bring his kingdom to the verge of ruin and then to perish obscurely by an unknown hand in a military brawl.

Such was the condition entailed on Sweden that a popular constitution was obtained by revolutionary methods from the late king's sister, Ulrica Eleonore, who in the chaos succeeded Charles XII. The queen was induced to yield the sovereignty to her husband, Frederick of Hesse-Cassel. It was at this time that the late territorial losses of Sweden were recovered by purchase. German thrift and economy were introduced into the government, and industry and commerce were somewhat revived.

Dying childless, Frederick was unable to transmit the crown. In 1751, the sovereignty was transferred to Adolphus Frederick of Lübeck, who was promoted to the regal dignity by the influence of the Empress of Russia. French intrigue had insinuated itself into the counsels of Sweden so that the political influence of the kingdom was sapped.

The ensuing reign was that of Gustavus III., who soon after his accession to the throne succeeded by revolutionary methods in eliminating the popular features of the government and reinstituting absolutism. The reactionary measures were carried as far as the abolition of the Swedish Senate. But the career of the king was cut short by his assassination, in 1792. Then followed a regency during the minority of Gustavus IV. When the king came of age the absurdities of his government gave color to the belief in his insanity. His abdication followed, and the regent, the Duke of Södermanland, took the throne with the title of Charles XIII. It was at this juncture that a treaty made with Russia acknowledged the transfer of Finland from Sweden to the Czar.

Provision was made for the succession by the election of the Duke of Holstein-Augustenberg as Crown Prince of Sweden. This was the epoch of the Napoleonic wars. Through the agency of Napoleon and the valor of Marshal Bernadotte, Norway was assigned to Sweden as a part of her dominions. In 1810, the Duke of Holstein-Augustenberg was assassinated, and Bernadotte was nominated first as Crown Prince and then as king, with the title of Charles XIV. Such was the situation of affairs when the fortunes of Napoleon waned and he was deserted by the underkings whom he had created. Bernadotte kept the Swedish throne until 1844, and then transmitted the crown unimpaired to his son Oscar I. This period in Swedish history was, moreover, one of the most prosperous. Modern Europe has hardly ever furnished a more successful king than Bernadotte. He was able to establish hereditary descent in his family. Charles XV., who came to the throne in 1859 was his grandson. His reign extended to September, 1872, when the crown was transmitted to his brother Oscar II., who in 1907 was succeeded by his son Gustavus V.

Government. The government of Sweden is a limited monarchy. The king is an hereditary ruler. The law of the succession dates from September, 1810. The powers of the sovereign are extensive. His person is inviolable. He declares war and peace with the consent of the Council of State. His legislative authority extends to all civil questions. The remaining legislative functions are lodged in a Diet or Parliament consisting of two chambers of elective representatives. The first chamber consists of 150 members who are chosen for a term of six years. The second chamber, or popular branch, consists of 230 representatives, of whom 80 are chosen by the municipalities, and 150 by the rural districts, for a term of three years.

The executive is assisted in the administration by a responsible ministry of 9 members, as follows: Minister of State; Foreign Affairs; Justice; War; Marine; Interior; Finance; Education; Agriculture.

Industry and Labor. Almost the whole body of the people are engaged in agriculture. More than one half of all are farming peasants. The agricultural classes embrace men, women, and children; all go to the fields together. Only about 1,600 families belong to the nobility. The Swedes are an energetic, honest, and thrifty people, and their industries are highly productive. The character of the Swedish common people may be well estimated by the large contingent of emigrants coming to the United States.

Sweden is rich in mines. The country abounds in the material suggestions of manufacture, and the coasts, indented everywhere with bays and inlets, offer the finest natural facilities for commerce. The opportunities for internal navigation are equally great. The plentiful distribution of lakes and rivers has been reinforced with more than three hundred connecting artificial waterways. All the facilities of the industrial and commercial life are abundantly present, and these have been improved by the enlightened policy of the Swedish kings, who have generally encouraged and patronized those enterprises which look to the promotion of industry and commerce.

Religion. Lutheran Protestantism is recognized as the state religion of Sweden. To this faith the sovereign must adhere. All other religions are tolerated. The Swedish people are overwhelmingly Lutheran. Those who profess other religions number in all fewer than 70,000. The Lutheran clergy are supported partly by the parishes and partly by the revenues derived from church lands.

Education. Education in Sweden is well advanced. At the head of the system stand the two great universities of Upsala and Lund. There are seventy-seven high schools in the kingdom; fourteen normal schools; eight technical schools; ten navigation schools; nineteen benevolent institutions — these beside schools of medicine and special and military schools. The primary instruction is free and compulsory. The only exception is in the case of pupils who are privately educated. Of primary schools there were 13,969 in 1906.

Defense. Sweden is well defended with military works. On the coast are the fortifications of Karslkrona, Kungsholmen, Hastholmen. Stockholm is well protected. The principal fortress of the interior is Karlsborg on Lake Wetter. Since the separation of Norway and Sweden a neutral zone has been established between the two countries. The Swedish army is in a state of transition. Reorganization was begun in 1901 and is expected to be complete in 1914. The old feudal militia, called Indelta, is being retired. Volunteers are to form the skeleton corps which will be filled by conscripts. All men are liable to service between the ages of 21 and 40. The initial training is 150 days for the infantry and 281 for the cavalry and artillery. The peace strength is 37,306, and the war effective 346,000. The navy consists of a few ironclads of moderate armament with a small auxiliary fleet of unprotected vessels.

The area is 172,876 square miles. The number of inhabitants in 1908 was 5,377,713.

1657. Sweden engages in a **war with Denmark**, but in the following year a brief peace is concluded at Roskilde. The war is speedily renewed, and Charles X. of Sweden besieges Copenhagen. The Swedish fleet is overcome by the Danes with their Dutch allies.

1659. Charles abandons the siege of Copenhagen, and his forces are routed by an army under Frederick William of Brandenburg.

1660. Charles X. dies and is succeeded by his son, Charles XI., a child five years old. A peace is negotiated with Brandenburg, Germany, and Poland, by which **Livonia and Esthonia are ceded to Sweden.** A treaty with Denmark follows, by which the Danish territories in Swedish Scandinavia are acquired.

1669. Sweden joins England and Holland in an **alliance against the French**; in 1672 the treaty of Stockholm is signed with France.

1675. The Swedes make an **invasion of Brandenburg**, but they are overcome by the forces of **Frederick William, the Great Elector, at Fehrbellin**, June 18.

1679. Treaties are concluded by Sweden with Brandenburg and Denmark. (See FRANCE.)

1697. **Charles XII.** succeeds Charles XI. on the throne of Sweden.

1700. Denmark is joined by Russia and Poland in a war against Sweden, but Charles lays siege to Copenhagen and the Danes are compelled to make the peace of Travendal. The Swedish troops **rout the army of Peter the Great at Narva**, November 30. In the following year Charles **vanquishes the Poles** and their Saxon allies. In 1702 he enters Warsaw and, after a victorious battle with Augustus II. at Kliszow, occupies Cracow. In 1703 he again routs Augustus at **Pultusk** and in 1704 deprives his enemy of the Polish crown and secures the election of Stanislas Leszczynski. (See RUSSIA including POLAND.)

1708. Charles XII. now invades Russia, but in the following year, on July 8, his army is destroyed by Peter the Great, at **Poltava**; Charles flees to Turkey, and the Danes invade Sweden.

1710. A Swedish force under the command of Stenbock succeeds in expelling the Danes from the country.

1713. Stenbock surrenders at Tönningen to an army of allied Russians, Danes, and Saxons. Charles XII. returns to Sweden in 1714.

1715. War against Sweden is declared by Frederick William I., who captures Stralsund, in December. In the following year Charles makes an invasion of Norway, but the campaign ends in failure.

1718. **Charles XII.** again tries to subjugate Norway; **he perishes** in the siege of Frederikshald, December 11. **Ulrica Eleonora** succeeds him on the throne.

1719. Ulrica inaugurates her reign, which is in general liberal, by the execution of the prime minister, Görtz; a treaty with George I. of Hanover is concluded by which Sweden cedes Bremen and Verden. In the following year a treaty is signed with Prussia at Stockholm by which most of Hither Pomerania is yielded to Prussia. Ulrica abdicates the throne in favor of her consort, **Frederick of Hesse-Cassel.**

1721. By the treaty of Nystad with Russia, Sweden loses Livonia, Esthonia, Ingria, and Karelia.

1741. War with Russia again breaks out, but a treaty is made at Abo, two years later.

1751. **Adolphus Frederick, of the House of Holstein-Eutin**, succeeds Frederick in Sweden.

1756. Sweden takes the part of Austria in the **Seven Years' war.** (See AUSTRIA, etc.)

1757. Sweden declares war against Prussia, but in 1762 withdraws from the war. (See PRUSSIA, etc.)

1771. Adolphus Frederick is succeeded by his son, **Gustavus III.**

1788. Sweden declares **war against Russia** and two years later, in July, wins a complete success in the Gulf of Finland. This is followed in August, 1790, with a treaty of peace.

1792. Gustavus III. is attacked, March 15, by the assassin Anckarström; he dies March 29. His son, **Gustavus Adolphus III.**, succeeds to the throne of Sweden.

1807. **Napoleon** subjugates the Swedish territories in Germany, in September. (See FRANCE.)

1808. **Finland** is conquered by Russia, and in the following year it is formally ceded by Sweden.

1809. Gustavus IV. of Sweden is compelled to abdicate the throne; he is succeeded by his uncle, Charles XIII. **Bernadotte,** one of the generals of Napoleon, is chosen, in 1810, as crown prince of Sweden with the title of Charles John.

1814. By the treaty of Kiel with England and Denmark, **Denmark cedes Norway to Sweden,** receiving **Swedish Pomerania** in return, January 14. The possession of Norway is confirmed to Sweden by the congress of powers at Vienna, June 9, 1815.

1818. On February 5, Bernadotte succeeds to the throne of Sweden and Norway as **Charles XIV. John.**

1844. Charles XIV. John dies, March 8, and is succeeded by his son, **Oscar I.**

1857. Charles, the son of Oscar I., becomes regent for his father. In October, a decree of banishment against Catholics who have been converted from the Lutheran faith is promulgated; but **religious toleration** in a modified form is allowed by laws of 1860.

1859. In July, Charles succeeds his father as **Charles XV.**

1872. **Oscar II.** succeeds his brother **Charles XV.** on September 18.

1875. In May, the King and Queen of Sweden visit Berlin and Copenhagen and are warmly received.

1905. Sweden acknowledges the independence of Norway.

1907. December 5, **King Oscar dies,** and the former Crown Prince takes the oath as King **Gustavus V.**

1908. January 4, by command of the King, royal pomp is abolished at the opening of the Parliament.

August 27, the Congress of the International Patent Union meets at Stockholm.

1909. February 13, a bill passes both houses, permitting all inhabitants over 24 years of age, without distinction of sex, to vote, with proportional representation in the Diet.

SWITZERLAND.

THE independence of the Swiss cantons was guaranteed by the Peace of Westphalia. Three hundred and forty-one years had passed since the thirty-three heroes of Schwyz, Uri, and Unterwalden had met on the meadow of Rütli and sworn that their country should be free. Sixteen years before the oath of Rütli the three cantons had formed their defensive league. Austria, however, had never ceased to covet the little mountain states, and many wars had been fought to subdue them. The congress at Osnabrück passed upon the question once for all, and the independence of Switzerland has never since been dangerously menaced.

The geographical situation tended to republicanism and to the confederative system of government. For more than a century after the close of the wars of the Reformation, Switzerland was undisturbed in her development. The country was almost exempt from foreign aggression. In 1712, however, a civil war broke out, in which there was a democratic insurrection on one side, and an oligarchical tyranny on the other. In this conflict, about a hundred and fifty thousand Switzers were under arms contending in civil strife. The party of the oligarchy established itself in the cantons of Lucerne, Berne, Freiburg, and Soleure. Though the republican form of government was preserved, the common people were deprived of their political rights and were reduced to a deplorable social condition.

It was this state of affairs in the Swiss cantons that gave excuse to the French Republican armies for invading the country. In 1798, Berne was captured and its armory plundered by the French, who proceeded to reorganize the Republic on a more democratic foundation. Eighteen cantons were constituted, and these were united under the name of the Helvetic Republic. Aarau was made the capital. A new constitution was provided in analogy with that of France. The forest cantons vainly resisted the revolution, but the new order was effectually established.

The French occupation of Switzerland extended to 1802, when the army was withdrawn. This was followed by a general insurrection, and a second invasion by the French was necessary to uphold the Helvetic Republic. In this crisis, Napoleon, then First Consul of the French, began to interfere, and through his agency the old cantonal system was restored. The government was placed in the hands of a Diet, which convened in turn at Berne, Zurich, Lucerne, Basel, Freiburg, and Soleure. By this body all federal affairs were decided. The local governments remained under direction of democratic assemblies in each of the cantons. The system thus constituted was in striking analogy with the old Confederation of the United States.

From 1803 to the downfall of the French Empire, the Swiss Republic flourished. Though all Europe was in commotion and conflict, the little democracies of the mountains remained secure. At the time of the Congress of Vienna, in 1815, the Swiss Diet submitted to that body a revised constitution by which the three new cantons of Geneva, Valais, and Neuchâtel were added to the Republic. Switzerland was also enlarged on the side of France. The new system guaranteed local independence to the cantons and provided that the federal government should be conducted alternately at Berne, Lucerne, and Zurich.

Two years afterwards the Swiss Republic was induced to enter the Holy Alliance, and in doing so, to agree to the abrogation of the liberty of the press. The right of refugees to asylum in Switzerland was denied, and the old aristocracy was permitted to ensconce itself in its ancient privileges.

Always in recent times the Republic has sympathized with the revolutions and reactions in France. In 1830, the political insurrection in the latter country spread into several Swiss cantons, and the people rising against the authorities obliged them to concede a larger measure of liberty.

In the fourth decade of the century, the most serious question with which the federation was troubled was that of permitting Switzerland to continue to be the asylum of political refugees. Against this long-standing usage the powers protested, and the pressure upon the Diet became so severe that in 1836 several of the exiles were expelled from the country. Two years afterwards the French Government demanded that Louis Napoleon, who was then resident at Thurgau, should be driven forth; this was first resisted, and then, by the action of the exile himself, avoided.

The religious and social condition of Switzerland was greatly disturbed in this period by the counter-ambitions of Protestants and Catholics in the affairs of the State. These difficulties culminated, in 1844, in a proposition to expel the Jesuits, but the latter were, for a time, able to hold their ground. In 1845, another motion of expulsion was made, and was carried. Civil war broke out, and, the Jesuits flying from the tumult, the seven insurgent cantons submitted to the decree.

The general revolutionary movement of 1848 induced a corresponding change in the political institutions of Switzerland. A new constitution was made and promulgated. Then followed the independence of Neuchâtel and its subsequent reannexation. As soon as the states of Europe had suppressed the insurrectionary movement, a multitude of refugees flocked to the Swiss cities, and the federation was again put on the defensive for receiving them. At one time, diplomatic relations with several countries were suspended on this account. The counter-revolution which was attempted in Neuchâtel was unsuccessful, and that province was finally given up by Prussia, in 1857.

The action of the congress of Turin, 1860, in transferring Savoy from Sardinia to France produced great dissatisfaction in Switzerland, and a formal protest was made against the change; but the powers refused to alter their decision. More important was the contention with Italy in 1874, relative to the international boundary. This question was referred to the American Minister at Rome, and was decided in favor of Italy. This was followed in the next year by a commercial treaty between the two countries. The

subsequent history has been along the lines of constant and peaceful internal development. Sometimes the hospitality of Switzerland has been abused by foreign refugees. Its own people maintain all the traditions and virtues of their ancestors.

Government. Switzerland is a federative republic. The government approaches more nearly the democratic form than does that of any other state of Europe. The advantage of complete local initiative in local affairs is shown in the Swiss system better than in any other government which has existed since the epoch of the Greek democracies.

The present constitution of Switzerland dates from the year 1874. The federal government, like that of the United States, is sovereign in all matters of peace and war, in the making of treaties, in the coining of money, in the control of the army, and in everything distinctly national and international. The executive head of the confederation is a President, who is elected annually by the two chambers. The real executive power, however, is lodged in the *Ständerath* and the *Nationalrath*, these bodies comprising the two chambers of the Federal Assembly.

The 167 members of the lower chamber are chosen at a general election for a term of three years. The whole country is divided into districts of 20,000 inhabitants and there is one deputy from each district. The members of the Ständerath, 44 in number, two for each canton, are chosen by their provincial constituencies, and their term of service depends upon the respective cantons. The President is directed in his duties by a *Bundesrath*, or Federal Council, of seven members, as follows: Minister of Foreign Affairs; Interior; Justice and Police; Military Affairs; Finance and Customs; Agriculture and Industry; Posts and Railways.

A striking peculiarity of the Swiss constitution is the direct voice of the people in legislative affairs through the initiative and referendum. The demand of 30,000 citizens, or of eight cantons, obliges the Assembly to submit any one of its acts to a popular vote for revision or annulment. An amendment of the federal constitution must be submitted to the people at the request of 50,000 voters. The different cantons, each having its own Council, apply the same principle in different degrees. Zurich even submits all the acts of its Council to the popular vote at semiannual elections, while in Zurich every citizen may propose a law to the Council, and if one third of that body vote favorably it must be submitted to the people. In a few of the smaller cantons matters are decided in an annual spring mass meeting, though each has its Council.

Industry and Labor. The general character of Switzerland favors a great variety of products. Such is the difference in the elevation of different parts and in the relations of sun and season that nearly all the productions of the north temperate zone may be found in this region or in that. In the canton of Ticino the climatic condition is nearly the same as that of Italy. From this region the ascent to the Alpine mountains and to the more northerly provinces brings a colder and still colder condition, until the range of snow and arctic rigor is reached.

Those mountain slopes and valleys that are favored by the sun have a happy climate. In Valais the fig and the grape flourish, not only in the valleys, but as far up as the snow line. A great part of the surface of Switzerland is covered with lakes and glaciers. The water supply is abundant. The rivers are short and swift. The Rhone has long been called the Arrow, from its flight. Fish of many species abound in lakes and rivers. The Alpine animals, such as the chamois, bear, wolf, wild boar, roebuck, fox, hare, and otter, provoke the pursuit of the Swiss hunters, the most daring in the world.

The agricultural productions are those common to Central Europe; but in no part of Switzerland is there opportunity for wide and extensive cultivation. Everything is local and incidental to the given situation. The southern slopes of the Jura are generally occupied with vineyards. So also are the valleys of the principal rivers. Flax and hemp are among the most important productions of the fields. Nearly twenty per cent of the territory of Switzerland is still occupied with the native forests. Out of these great quantities of good timber are drawn. The grazing interest is one of the leading industries. The Swiss pastures are fine and nutritive. The breeds of cattle, horses, sheep, and swine are of the best grade, and the animal products are famous in the markets of Europe and the world. Of this kind is the Swiss cheese, produced in Gruyère and Uri.

Despite lack of coal and iron, manufacturing has prospered to a surprising degree. In Aargau, Appenzell, St. Gall, Zug, and Zurich the cotton industry is carried on with great success. St. Gall is the most celebrated seat of the embroidery interest in the world. Silk ribbons are produced in finest quality and great abundance in Basel. The silk manufacture flourishes also in Zurich. The watch manufactures of Berne, Geneva, Neuchâtel, Solothurn, and Vaud are still renowned. In these seats of industry, until the last quarter of the 19th century, watches were produced wholly by hand patterns. In the same cities the manufacture of musical boxes surpasses the like industry in any other country. So also the wood carving, which is applied to a great variety of uses.

The principal exports of Switzerland are watches, musical boxes, silk goods, embroideries, and cotton goods. Swiss labor, although not so well remunerated as in some European and American countries, is nevertheless fairly rewarded, and the condition of the laborer is enviable. His independence brings, along with citizenship, a large degree of domestic happiness, and the simplicity of his tastes, together with an industrious habit, insures a competence and a measure of humble welfare.

Religion. Religious freedom and perfect liberty of conscience and of creed are guaranteed in the Swiss constitution. There is no church establishment, and no church rate is exacted of any person. Since 1874, the legislation of Switzerland has been strongly directed against Catholic influence in the country. No Catholic bishopric can be established without special act of the national legislature. The order of Jesuits is excluded from the country, and the members of that order cannot exercise their functions within the territory. More than half of the Swiss people are Protestants. There are a few thousand Jews. Switzerland has in many instances been a refuge for freethinkers and skeptics of Europe.

Education. Though education is as generally diffused in Switzerland as in any other country of Europe, the administration is not centralized. During the last half of the nineteenth century the elementary instruction of the Swiss has been greatly promoted. By the statutes of 1874 the system became compulsory. The method of support varies in the different cantons. The compulsory law, as in other countries, has never been well enforced, and a large percentage of the Swiss children do not attend school. There must be, however, a primary school in every district. Secondary schools for pupils between the ages of twelve and fifteen years are also established in every district. The professional and industrial schools of the country number 174; normal schools, 43; middle preparatory schools, 42. There are six Swiss universities; namely, those of Basel, Berne, Zurich, Geneva, Freiburg, and Lausanne. There is also a polytechnic school at Zurich, and an academy differing little from a university at Neuchâtel.

Defense. The mountain-guarded situation of Switzerland is a large factor in national defense. Nevertheless there are fortifications to defend the Gothard and in the Rhone Valley. No navy is possible and a standing army unnecessary as the inviolability and neutrality of Switzerland are guaranteed by the great powers. Service in the national militia is universal. There are few exemptions except for physical disability. The military initiative rests with the cantons, but the confederation commands and directs. Annually every Swiss must practice in a course of rifle practice. In the Auszug or Elite in 1908 there were 138,252 men and in the Landwehr 66,317.

The area is 15,976 square miles. The population in 1905 was 3,463,609.

1712. Switzerland is devastated by a **civil war,** in which the oligarchical party is successful against the democracy. During the remainder of the century the cantons retain their federative form of government, but enjoy only a small measure of freedom.

1798. The French republican army enters Switzerland; the confederacy is dissolved and the **Helvetian republic** is established in April; Geneva is annexed to France. (See FRANCE.) From 1799 to 1802 Switzerland is the scene of a series of campaigns. (See FRANCE.)

1802. The federal government is restored in May; the number of cantons is increased to nineteen with a landamman appointed by France. On July 13, Uri, Schwyz, and Unterwalden separate from the confederation.

1811. Switzerland sends a force to the aid of the French, and the allies against France enter Switzerland in 1814.

1815. By the **congress of Vienna** the independence of the country is secured and the number of cantons is increased to twenty-two.

1830. **A new constitution** is adopted.

1839. A law to make education independent of the clergy is passed and a series of civil strifes over religious matters ensues.

1846. An effort is made by the Catholic cantons to secure education by the Jesuits, but this is resisted by the Protestants, whereupon the Catholic cantons, Uri, Schwyz, Unterwalden, Freiburg, Zug, and Valais, form a *Sonderbund* to maintain Catholic education. On October 7, an insurrection occurs in Geneva, and a provisional government is established by the Protestants.

1847. On July 20, the diet pronounces the *Sonderbund* illegal, and dissolves it. In September, an order is issued for the expulsion of the Jesuits. The *Sonderbund* makes an appeal to arms to resist the decree of the diet, October 21. The diet prepares to overcome the *Sonderbund* and on November 14, Freiburg surrenders. In the **civil war** that follows, the forces of the diet under Dufour are victorious near Lucerne, November 23. On November 29, the *Sonderbund* submits and consents to the expulsion of the Jesuits and the secularization of the property of the monasteries.

1848. **A new constitution** is adopted, September 12.

1857. War is threatened by the king of Prussia to regain Neuchâtel, which had repudiated its allegiance to Prussia in 1848 and proclaimed itself a free canton of the Swiss confederation. The Swiss prepare to support Neuchâtel, but by the intervention of England and France the king of Prussia, in consideration of receiving a pecuniary compensation and the privilege of retaining the title of prince of Neuchâtel, renounces his claim.

1860. Switzerland protests against the annexation of Savoy to France; a small force attempts to enter Savoy, but is prevented by the Genoese.

1861. French troops occupy Vallée des Dappes, whereupon the Swiss declare their territorial rights to have been violated. On December 8 of the following year a **treaty with France** provides that there be mutual cessions in the region, and that no military works be constructed in the ceded territory.

1865. An **international social science congress** sits at Berne.

1874. The boundary dispute with Italy is settled in favor of **Italy,** by the award of George P. Marsh, American Minister at Rome.
A new constitution is adopted, May 29.

1877. Dr. Schenck of Berne is elected president of the confederation; a law regulating the hours of labor for women and children is confirmed by a popular vote.

1878. The national elections for members of the Council result in the triumph of the Liberal party.

1879. An act is adopted by the Council restoring, at the option of the several cantons, the **death penalty** as a punishment for crime.

1880. A conference of the International Association for the reform and codification of **international law** is held at Berne in August.

1882. A new **commercial treaty** is concluded with France. The question of public instruction is finally settled by the passage of a compulsory education law, which is ratified by the people.

1883. The Pope renews his efforts to reverse the anti-Catholic legislation of previous years.

1884. The elections result in a reaction in favor of the Conservative and Ultramontane party. The International Peace and Arbitration Association meets in Berne.

1885. An international conference to promote a universal copyright among the nations meets at Berne, September 7. The spread of anarchistic and socialistic opinions is noted with alarm.

1887. The movement for an international copyright law, agitated for the past two years, results in the preparation of a *projet* which is signed by the representatives of Germany, England, Belgium, Spain, France, Haiti, Italy, Liberia, Switzerland, and Tunis.

1888. Proceedings are begun by the government against the Socialists. A new commercial treaty with Germany is prepared. An institute of international law is held at Lausanne.

1889. A company of Nihilists residing near Zurich are expelled from the country by the federal council.

1890. **Religious agitations** lead to riots in the canton of Ticino. An insurrection restrains the aggressive policy of the clerical party, in September, and order is only restored by federal troops.

1892. A session of the **International Peace Congress** is held at Berne in August; a resolution is passed for the creation of a confederation of the European states in the interest of Universal Peace.

1893. A severe law for the suppression of **anarchistic outrages** is passed by the federal assembly.

1896. A national exhibition illustrating the various branches of Swiss trade and industry is held at Geneva from May 1 to October 6.

Development of the World's Navy from the Earliest Phœnician Time.

1. Chinese Junk. Propelled by oars and by sails made from reeds matted together. Rudder so arranged as to be lifted out of the water when desired; decorations; flags, etc.

2. Egyptian Boat. Reconstructed from a Bas-Relief on the walls of the Terrace Temple of Dêr-el-bah'ari (West of Thebes) representing a fleet which was sent out by the Egyptian Queen, Makara-Ha-t-shop (17th century B. C.). Sails colored, and decorated with either religious or other emblems. Design and color of the sails copied from the tomb of Ramses III., at Thebes. *F. Steinitz, The Ship.* Bench of rowers protected from enemy by broad gunwale. Boat steered by two steering oars, one on each side at the stern; Military mast, etc. *Sir J. G. Wilkinson.*

3. Phœnician Bireme. Reconstructed from a few remaining coins, and from a relief in the Palace of Kuyunjik, built by King Sennacherib. *Layard, Monuments of Nineveh.*

4. Greek Galley. Battle of Salamis. Reconstructed from a Bas-Relief found near the Erechtheum, and a Bronze Votive Boat found at the same place. *Stern, Iconographic Encyclopædia.*

5. Roman Trireme. Punic War. Reconstructed after a drawing by Lemaître, and from relief found at Porto near the mouth of the Tiber. The special type shown here, known as "Navis turrita" (*Winckelmann*), carried attached to the yardarm of the military mast a heavy weight (dolphin) worked by rope and pulley, which by its sudden descent upon the deck of the enemy caused havoc there, the force of the fall often being sufficient to drive the weight through the ship and sink it. Boarding bridges were also carried by these boats to enable the military force to get rapidly upon an enemy's deck when held to the ship's side by grappling hooks. Sails decorated with the Roman She-Wolf. The position of the Trireme in this picture was especially chosen with a view of showing the arrangement of the three benches of oars, to which the galley slaves were c' ained.

Concluded three pages in advance.

For description see previous page.

DEVELOPMENT OF THE WORLD'S NAV

ROM THE EARLIEST PHŒNICIAN TIME.

Copyright by G. & C. Merriam Co.
Registered at Stationers' Hall, London, England

6. Drakar, or Norse Dragon. Reconstructed from: (*a*) the rock-cut pictures at Kyrkoryk and Bohuslän, and (*b*) the fragments of a vessel of the Viking period, taken from a tumulus near Fredrikstad, Norway; (*c*) the 30 oared boat found in the turf of Nydam, Sleswick, and preserved in the Museum at Kiel; (*d*) the Gokstad, Norway, boat; (*e*) the Viking ship at Sandefiord, with (*f*) the Bayeux tapestry carefully considered. These Viking boats carried as many as sixty pairs of oars, had a length of 300 feet, a breadth of 32 feet and a depth of 10 feet.

7. Venetian Galleass. With 26 oars. After Dürr's engraving in *Dillich's "Kriegsschule,"* 16th century. Sail decorated with the winged Lion of St. Mark. Guns carried in the bow of the boat.

8. French Man-of-War. Beginning of 14th century. Reconstructed from the model of the so-called "Nef." (A large table ornament for holding all manner of table utensils.) See *Viollet-le-Duc "Mobilier français,"* and the MSS. *"Statuts de l'ordre du Saint-Esprit au droit desir, 1352."* Sails decorated with the fleur-de-lis and the Cross of the Crusaders. Bow and stern of boat carry strongly fortified towers. First appearance of stern rudder in European seas.

9. English Three-master "Great Harry." One thousand tons, 122 guns, built at Woolwich 1514, burned 1553,—after a painting in Windsor Castle.

10. Ship of the Spanish Armada. Sails decorated with all manner of emblems, Saints, and Coats of Arms. *Jähns "Handbuch der Geschichte des Kriegswesens."*

11. Battle of Trafalgar. Nelson's "Victory" forcing her way through the French Men-of-War.

12. Fight between the "Constitution" and the "Guerrière."

13. "Monitor" and "Merrimac" in Hampton Roads.

14. The U. S. Battleship "Iowa."

15. The Spanish Protected Cruiser "Vizcaya."

16. U. S. Seagoing Monitor "Puritan."

17. The Spanish Torpedo Boat "Plutón."

1897. Legislature directs repurchase of principal railways by the state. First work on the Simplon tunnel begins at Iselle on the Italian side of the Alps.
1899. Law enacted providing for compulsory insurance for work people.
1906. January 25, the first train passes through the Simplon tunnel.
1908. June 29, the Alps are crossed by the balloon Cognac, owned by the Swiss Aero Club.
July 29, twenty-five tunnel workers are drowned by the outburst of an underground lake.
1909. January 10, by the collapse of an old church near Sion, 40 persons are killed and 60 badly injured.

TURKEY.

The decline of the Ottoman power in Europe, in the after part of the sixteenth century, was attributable partly to the inherent vice of the Turkish government, partly to the domination of the janizaries over the civil authorities, and in particular to the blow which the Sultan received in the overthrow of his fleet in the great battle of Lepanto, in 1571. During the wars of the Reformation, the influence of Turkey was scarcely felt in the affairs of western Europe. Eastern Europe in this period, however, was almost constantly at war. The Ottoman armies were nearly always engaged with the Poles, the Austrians, the Persians, the Russians, or the Venetians. In these conflicts the Turkish arms were never crowned with conspicuous success. At the peace of Karlowitz, in 1699, Turkey was stripped of her territories on almost every side. The Hungarian provinces were given to Austria; Azov to Russia; Podolia and the Ukraine to Poland; and the Peloponnesus and Dalmatia to Venice.

After the death of Mustafa, in 1703, Ahmed (Achmet) III. came to the throne and made a vigorous attempt to regain what his predecessor had lost. He succeeded in wresting the Morea from the Venetians, but in his conflict with Austria he was worsted from the start, being obliged as the price of peace to make a cession of Belgrade, Wallachia, and Temesvár. In 1730, the janizaries, preferring his nephew, Mahmud I., deposed Ahmed; for they had from Mahmud the promise of a Persian war. The ensuing conflict was disastrous to Turkey, and a peace was made in 1736. Already a war had broken out with Russia and her ally, Austria. In this contest the Turks were more successful, and Austria in turn purchased peace by the recession of Belgrade. Mahmud's reign ended in 1754, when he was succeeded by Mustafa III., who had an obscure reign of twenty years. Abdul-Hamid, who had been confined in the seraglio for forty-four years, was then made sultan. A Russian war called him into the field at the head of a great army on the Danube where he was defeated. Within the year (1774) the Treaty of Küchük Kainarja was made, and the Crimea was surrendered to Russia.

With the death of Abdul-Hamid in 1789, the crown was transmitted to his nephew, Selim III. This sultan made heroic efforts to recover what his predecessors had lost. He instituted great reforms. He secured the Dniester as the frontier line between his dominions and Russia. At length his pashas began to revolt, and the conquest of Egypt by Napoleon Bonaparte precipitated a war with France. Selim's virtues were turned against him, and in 1807 he was deposed by the janizaries. Mustafa IV. reigned a single year, and was followed by Mahmud II. This sultan participated in the affairs of western Europe until his death, in 1839. During his reign occurred the Greek Revolution. The historical attitude of Turkey as the protégé of the Western powers against Russia was assumed. Although the reforms of Mahmud were salutary, he could not successfully shore up the declining fortunes of the empire.

Mahmud was succeeded in 1839 by his son Abdul-Mejid. The latter reigned for twenty-two years, but was not able to change the hopeless condition into which the Ottoman Empire had fallen. More and more, however, European influences permeated Turkish society, and the Asiatic type of life and manners was forced back beyond the Hellespont. It was Abdul-Mejid who participated as an ally of Great Britain and France in the Crimean war. By the success of the allies and the curtailment of Russian ambition, Turkey obtained another respite; but the internal administration was so weak, and frequently so criminal, as to make a true national development impossible.

Abdul-Mejid died in 1861 and was succeeded by his brother Abdul-Aziz, whose policy differed but little from that of his immediate predecessor. After a reign of fifteen years the Sultan was deposed and the throne was given to his nephew, the oldest son of Abdul-Mejid, who occupied it three months as Murad V. In August, 1876, Murad V. was deposed and succeeded by his brother Abdul-Hamid II. Sultan Abdul-Hamid ruled longer than any of the thirty-three sultans who preceded him except Sultan Orkhan the Victorious and Sultan Solyman (Suleiman) I. the Magnificent (sometimes called Solyman II.). His reign was marked by the disastrous war of 1877–78 with Russia, by the defeat of Greece in the brief campaign of 1897 and by the Armenian troubles. A constitution was granted by the Sultan in 1876 according to the provisions of which a parliament met in 1877 and 1878, but after two sessions was discontinued. This constitution, after remaining practically a dead letter for almost thirty years, was revived in July, 1908. In the following spring Sultan Abdul-Hamid was deposed by the so-called "Young Turks," and his brother, Mohammed V., ascended the throne.

Government. Several times since Abdul-Mejid granted the *hatti-sherif of Gulhane* in 1839 has the attempt been made to reconcile the ideas of modern constitutional government and the doctrines of the sheri, or Mussulman law. According to the sheri all principles of legislation and judicature and all administrative methods are derived from the Koran and are supposed to harmonize with the accepted Mussulman faith. The creation, out of the existing elements in the Ottoman Empire, of a new civil structure, consistent with the requirements of modern civilization, is the task which those now in control of Turkish affairs have undertaken.

By the constitution the executive head of the empire is the sultan. Under his supreme direction legislative and executive authority is exercised There is a Parliament, consisting of two houses, a Senate and a Chamber of Deputies. Senators are directly appointed by the sultan from men at least forty years of age, who have rendered service to the state. In the chamber of deputies each deputy is supposed to represent 6,000 voters and is himself chosen by electoral delegates, each delegate representing 600 voters. Voters are Ottoman subjects, without distinction of race or creed, at least 25 years of age. The cabinet consists of 14 members, 1 without portfolio: Grand Vizier; Minister of Foreign Affairs; Justice; President of the Council of State; Minister of War; Marine; Public Instruction; Interior; Finance; Public Works and Commerce; Mines, Forests, and Agriculture; Pious Foundations; the Sheik ul Islam.

The Ottoman Empire is divided into thirty-eight governments called vilayets. Each of these is subdivided into sanjaks or provinces. The sanjak is further divided into kasas or districts. Over each vilayet is set a governor-general. A system of subordinate authority reaches down to the local communities.

Industry and Labor. Neither the genius of the Turkish race nor its existing social condition is favorable to the industrial life. The system of land-ownership is also a hindrance to primary pursuits. The public domain consists of either crown lands, of what are called "pious foundations," of lands granted by the crown, or of freehold properties. The latter are very limited. Free ownership is occasionally found in the towns, or in the landed properties adjacent thereto. But for the rest, fee simple is unknown. The natural fertility of a great part of the Turkish territory is thus wasted by the civil abuse. The primary productions of Turkey are tobacco, the cereal grains, the citrus fruits, figs, grapes, and a vast variety of the fruits peculiar to the temperate and subtropical parts of the northern hemisphere. Cotton, silk, madder, indigo, coffee, and opium are leading staples. About 44,000,000 acres of the imperial territory are under cultivation, and about 21,000,000 acres under the native forest growth. The mines of Turkey include coal, copper, lead, silver, manganese, sulphur, salt, alum, and many other important minerals. Of Turkish manufactures, the most important are carpets, silks, tapestries, materials for dress, glass, leather, and textile goods of many kinds, most of which are produced on hand looms, and many of which are unsurpassed.

Turkish labor is in a condition but little above the level of slavery. The best rewards of the toiler are taken away by taxation. The laborer himself is demanded for military service, or if he continue on his rented property his ignorance is such as to preclude him from improved methods of production, and to leave him in a state of semiserfdom. Yet the Turkish peasant often exhibits manly and attractive traits. The Turk of the upper classes, too, sometimes shows not only ability of a high order, but noble traits of character.

Religion. The religion of the Ottoman Empire is Islam or Mohammedanism. In Asiatic Turkey the Mussulmans predominate. In European Turkey fully half the population is Christian. The government concedes toleration to nine classes of non-Mussulmans. These are: Orthodox Greeks, the Catholic residue of the old Greek Empire who use the Roman Liturgy, Gregorian Armenians, Syrians and United Chaldeans, Maronites, Protestants, Jews, Nestorians, and Bulgarians, whose Exarch resided at Constantinople until 1908.

Education. According to western standards the education of the Turks hardly deserves the name. The Koran, however, inculcates education, provided always that education accords with the Koran. Nearly all towns and cities have public schools organized under provision made by the Minister of Public Instruction. Nearly every mosque has its school, some of a collegiate character and provided with libraries. The range of inquiry, however, is no wider or freer than the Mussulman religious system.

Excellent colleges and schools have been founded by Catholic and Protestant missionaries and philanthropists. The native Christian communities pay much attention to education and possess good primary and secondary schools with institutions of higher order.

Defense. All critical points on the frontier, except the mountainous boundaries, are suitably provided with defenses. The sea line of the Ægean, the Dardanelles, and the Bosporus are strongly fortified. The greatest fortress on the side of Russia is Erzerum. The period of liability to military service for all Mussulmans is twenty years. The Turk appears at his best as a fighter. The non-Mussulman residents may pay a tax of exemption and go free. The nomads of the empire are not generally subjected to military duty. The organization includes a regular army, a landwehr, and a militia. The empire is divided into seven military districts, with each of which an army corps is related. The peace strength of the army is not far from 300,000. Probably the war effective would be between 600,000 and 700,000. Forty years ago the Turks had a strong fleet of ironclads. The navy now consists of four protected cruisers, four torpedo gunboats, six destroyers, and thirty-four torpedo boats, some modern, some obsolete. It is being reorganized.

The entire area of the empire in Europe, Asia and Africa is 1,157,860 square miles. The population is about 25,000,000.

1663. Köprili leads the Turkish forces in an **invasion of Hungary.** (See Austria-Hungary.) In the following year they are defeated at St. Gothard, August 1, by Montecuccoli.
1669. **Candia** is wrested from Venice by the Turks.
1673. Turkish invaders are repulsed at Khotin by **John Sobieski,** afterward king of Poland.
1682. The Turks become allies of Hungary in the revolt against Austria. (See Austria-Hungary.) In July of the following year the Turks under Kara Mustafa **besiege Vienna,** which is defended by Starhemberg, but they are routed by the armies of Sobieski, Charles, duke of Lorraine, and the electors of Bavaria and Saxony, September 12.
1684. **Venice** joins the allies against the Turks.
1686. The Turks are driven from Buda and defeated in the Morea.
1687. The Turks are routed at **Mohács** by Charles of Lorraine, and the Venetians capture Athens.
1691. The Turks are defeated at Slankamen by Louis of Baden.
1696. The Russians take Azov (see Russia), and in the following year, on September 11, Prince Eugene of Savoy crushes the Turkish army in the battle of **Zenta.**
1698. A truce with Russia is signed at Karlowitz, in December.
1699. The **peace of Karlowitz** is established with Austria, Poland, and Venice. The Turks relinquish Hungary, between the Danube and the Theiss, and Leopold I. receives Transylvania; Poland recovers a large portion of the Ukraine, and Venice receives the Morea.
1711. The Turks espouse the cause of **Charles XII.** of Sweden against Russia, and recover Azov from Peter the Great. (See Russia.)
1715. The Turks regain the Morea from Venice.
1716. **A war with Austria** breaks out, and the Turks are beaten at Peterwardein, August 5, by the forces of Prince Eugene. He overcomes the Turks at Belgrade, August 16, entering the city two days later.
1718. The **Treaty of Passarowitz** (Požarevac) restores peace with Austria and Venice, July 21. Turkey retains the Morea, but loses to Charles VI. the Banat, parts of Servia and Bosnia, Belgrade and Wallachia.
1737. Austria renews the war against Turkey, but two years later agrees to a peace by which the Turks regain Belgrade and territories in Servia.
1768. Turkey declares war against Russia at the time of a Polish insurrection. (See Russia.)
1774. The Russians besiege Shumla, and a peace is made at **Küchük**

Kainarja, by which Turkey gives up her suzerainty over the Crimea and other Tatar territories.

1787. Turkey renews the war against Russia, while the Austrian force moves against Belgrade, but fails to capture it. The Turks are defeated by the Austrians and Russians at Focşani, and Belgrade is captured.

1791. In August, a peace with Austria is concluded at Sistova, and in January, 1792, with Russia at Jassy. (See RUSSIA.)

1802. In June, a treaty is signed with France. (See FRANCE.)

1804. Czerny George heads the **Servians** in a **revolt** against Turkey. Two years later Russia declares war. (See RUSSIA.)

1807. The Servian rebels succeed in overcoming the Turkish authority.

1808. Mahmud II. ascends the throne of Turkey.

1812. A peace with Russia is signed at Bukharest, May 28, by which the **Pruth** is made the **boundary line** between the two countries.

1813. The Turks succeed in reëstablishing their rule over Servia, but a second insurrection occurs two years later under the leadership of Miloš Obrenović.

1817. Miloš Obrenović is elected prince of Servia.

1823. In August, **Markos Bozzaris**, the Suliote leader, makes an onslaught on the Turks at Karpenisi, and is slain.

1826. Mahmud II. causes a **massacre of the janizaries**, and that body is abolished. A treaty with Russia is signed at Akerman.

1828. Russia begins a war against Turkey in April. (See RUSSIA.)

1829. A peace, favorable to Russia, is signed at Adrianople, September 14.

1830. The **independence of Greece** is declared by the powers (see GREECE), and is recognized by Turkey.

1832. The Turks are routed by **Ibrahim Pasha.** (See EGYPT.)

1833. The Russians come to the aid of Turkey against Egypt, but peace is established with the viceroy, the sultan ceding Syria and other regions. A treaty is concluded with Russia at Unkiar Skelessi.

1839. Turkey renews the war against Egypt. (See EGYPT.) On July 1, **Mahmud II. dies** and is succeeded on the Turkish throne by **Abdul-Mejid.** On November 3, by the advice of Reshid Pasha, the sultan promulgates the hatti-sherif, proposing constitutional reforms within the empire.

1841. A peace is made with Egypt by which Syria is recovered, and **Mehemet Ali** is recognized as an **hereditary tributary prince.** (See EGYPT.) A treaty with the powers is also concluded, by which the **Dardanelles are closed** to foreign warships.

1850. An insurrection breaks out in Bosnia, but it is quelled in the following year by Omar Pasha.

1852. The **Montenegrins** begin a **war** against the Turks.

1853. **Omar Pasha** conducts a campaign against the Montenegrins; a pause in the contest occurs in February, owing to the imminence of the Crimean war. Hostilities break out with Russia, Turkey having the support of Great Britain and France. (See the countries named.)

1854. England and France send their armies and navies to the Black Sea, and the **Crimea** becomes the principal seat of a **war** lasting for three years. (See RUSSIA.)

1856. Abdul-Mejid proclaims the hatti-humayun, February 18, a statute introducing administrative reforms. On March 30, the **treaty of Paris,** terminating the Crimean war, is concluded. (See RUSSIA.)

1860. The **Druses massacre the Maronites** in the Lebanon; many Christians at Damascus are slain. The powers hereupon interfere and French troops are stationed in Syria.

1861. An insurrection breaks out in **Herzegovina,** aided by the Montenegrins. In June, **Abdul-Mejid** is succeeded by **Abdul-Aziz.** At the demand of the powers a Christian is appointed to serve as governor of the Lebanon. The Montenegrins are defeated (1861) by Omar Pasha.

1862. The Turks and Servians in Belgrade wage a bloody war.

1866. An **insurrection** breaks out in **Crete,** but the Turks in the two years following vanquish the rebels.

1867. The Turkish troops are withdrawn from Servia.

1875. In July, another insurrection breaks out in Herzegovina, followed by a similar uprising in Bosnia, in August.

1876. On January 31, the powers send a note to the Porte demanding reforms. The insurrection in Herzegovina, however, continues with violence, Mukhtar Pasha conducting the campaign of the Turks; the revolt in Bosnia is conducted with greater spirit, in April. On May 6, the consuls of France and of Germany are murdered at Saloniki, and in the same month **massacres** occur in **Bulgaria.** A revolution takes place in Constantinople on May 12, whereupon the **Berlin Memorandum** is drawn up, on May 14, by Gorchakov, Bismarck, and Andrássy.

On May 29, the sultan **Abdul-Aziz** is deposed and **Murad V.** is placed on the Turkish throne, Abdul-Aziz being assassinated, June 4. On July 2, war is declared by Montenegro and Servia, and on July 28 the Montenegrins are successful at Vrbica (Vrbitza). The Servians are beaten on the Timok, but are victorious before Aleksinac, in August. On August 31, Murad V. is deposed, and is succeeded by Abdul-Hamid II. In October, the Servians are conquered at Diunis and Aleksinac; their power of resistance is ended. On October 30, Russia issues an ultimatum to Turkey, and on the following day a general armistice is signed. On December 19, Midhat Pasha is created grand vizier, and on December 23 a constitution for the Turkish empire is promulgated. On the same day a **conference of the great powers** begins at Constantinople.

1877. The propositions of the conference as to reforms in Turkey are rejected by the council of the Sultan, January 18; two days later the conference ends. On February 5, Midhat Pasha is dismissed from office. A peace with Servia follows, on March 1. The powers make a protocol at London, March 31, but the Porte rejects it, April 9. On April 16, Russia and Roumania conclude a convention, and on April 24 **Russia** makes a **declaration of war** against Turkey. On the same day Russian troops invade Roumania and Armenia. In the following month Roumania becomes engaged in the war against the Porte. On May 17, Ardahan is stormed by the Russians, and on May 21, Roumania proclaims her independence. The Russians cross the Danube at Zimniţa (Simnitza), June 27. On July 9, Mukhtar Pasha compels the Russians to give up their siege of Kars. On July 13 and 14, Gurko passes the Balkans, and on July 16, **Nicopolis falls. Osman Pasha** is victorious at **Plevna,** July 20, and on July 30 a part of the Grand Duke Nicholas's army is overcome before that city. Gurko is beaten at Stara Zagora (Eski Saghra), July 31 and August 1, by Solyman (Suleiman) Pasha. On August 21, Solyman attacks the Russians in the **Shipka Pass.** In August and September, Mehemet **Ali** makes a victorious campaign against the Russians on the Lom. On September 3, Lovеč (Lovča) is stormed by Russians. On September 8, Nikšič yields to the Montenegrins. Plevna is assaulted by the Russians and Roumanians, on September 11. On October 15, Mukhtar Pasha, routed in the battle of Alaja Dagh, retreats. On October 24, Gorniy Dübnik is stormed by General Gurko, and on October 28 he captures Telish. On November 4, the forces of Mukhtar Pasha retreat behind the fortifications of Erzerum. On November 18, Kars is stormed; on November 23, Mehemet Ali is forced to withdraw from his place at Pravec. On December 10, Osman Pasha makes an effort to penetrate the lines of the Russians at Plevna, but being overwhelmed he surrenders. On December 14, Servia declares war against Turkey, and Gurko advances across the Balkans.

1878. On January 4, Gurko enters Sofia. On January 7, Kartsov forces a way through the Troyan Pass, and two days afterward the Turkish troops in the **Shipka Pass** are captured by the forces of Mirski, Skobelev, and Radetzky. The Servians compel Niš (Nish) to surrender, January 10; on the same day Antivari is taken by the Montenegrins. After three days' fighting, the army of Solyman is utterly routed near **Philippopolis,** January 17, and on January 20 **Adrianople is occupied** by the Russians The victors move toward Constantinople and an armistice is made, January 31. The British fleet enters the Sea of Marmora, February 13. On March 3, the **Treaty of San Stefano** is concluded.

In April, Great Britain enlists a division of Sepoys at Bombay to serve as troops against the Russians. On June 4, **England** concludes a secret agreement with Turkey, by which she promises to maintain the **integrity of the Turkish empire** in Asia, while the Porte permits the occupation of Cyprus by British soldiers. A **congress of the powers** assembles in **Berlin** on June 13 and on July 13 the **Treaty of Berlin** is signed. By its stipulations Roumania, Servia, and Montenegro are declared to be independent principalities, while the larger part of Turkish Armenia, with Kars and Ardahan, Batum, and a portion of Bessarabia, go to Russia.

1880. In June another conference of the powers is held in Berlin, and in September a naval demonstration is made off the Albanian coast to enforce the decree of the congress of Berlin.

1881. Midhat Pasha and others are found guilty of the murder of Abdul-Aziz and are sentenced, on June 29.

1882. The policy of Abdul-Hamid in promoting the reorganization of his empire on a basis more strictly conforming to Islamite principles ends in failure. In November a conspiracy is divulged to assassinate the Sultan, and the ministry is dismissed under suspicion.

1883. The **troubles in Armenia** become acute. The promise of the Porte to Great Britain to reform the abuses existing in the vilayets of Armenia is not fulfilled. The oppressed party of the Armenians, relying upon the active sympathies of Russia and England, begin an agitation which breaks into an actual insurrection in Erzerum. The Ottoman government proceeds to crush the rebellion and to prosecute and destroy the insurgents. A similar movement, though for different reasons, shows itself in the island of Crete. A resolution is passed by the Cretan assembly declaring that the religious taxes known as the *vacouf* taxes shall no longer be paid to the Turkish government.

1884. The efforts of Abdul-Hamid to nationalize his administration bring him into fresh difficulties with his Christian subjects. Outrages are committed by Mussulman fanatics in Macedonia, and a rebellion occurs in Yemen. A serious difficulty arises on the frontier of Montenegro, where armed bands sack the villages.

1885. **Insurrections** in different parts of the empire and foreign complications, especially the difficulty with Bulgaria, lead to the mobilization of the Turkish army and to the assembling of the representatives of the great powers in a conference at Pera. The issue considered is the proposal to settle the Bulgarian question by recognizing the revolution of September 18 and by deposing Prince Alexander. In this conference, Great Britain and Russia are brought into sharp controversy. An agreement is reached with England for the management of **Egyptian affairs** by two commissioners appointed, the one by the Porte, and the other by the British government.

1886. An extradition and naturalization treaty with the United States is negotiated by the American minister.

1888. The Christian party in Armenia agitates the question of nationality, involving the reëstablishment of the ancient Kingdom of **Armenia.** This movement the Turkish administration answers with **repressive measures and cruelties,** many of which are barbaric. An appeal of the Armenians to Great Britain for protection is refused on the ground that interference is forbidden by the Treaty of Berlin.

1889. The Turkish outrages in Armenia shock the nations. Whole villages are given up to devastation and butchery. The Porte attempts to justify the horrors perpetrated on the Armenian Christians by alleging the necessity of suppressing the insurrection of its subjects.

1890. The difficulties and outrages in Armenia continue. The question becomes international, and western Europe in particular is agitated to the verge of declaring war against Turkey. A campaign is waged for the subjugation of the Druses of Hauran.

1891. A threatening insurrection among the Assyrs of Yemen begins; Turkey is influenced thereby to friendly relations with Russia and France as against Great Britain.

1893. The Armenian nationalists establish committees in the various capitals of Europe for the purpose of rousing public opinion to the point of interfering with the Turkish administration. The political trials of the Armenians are prosecuted, and a measure of justice is secured under the observation and criticism of Europe.

1895. The **reign of terror in Armenia** breaks out with greater violence than ever. The half-savage Kurds of the vilayets rise upon the Armenian towns and villages and indescribable butcheries and horrors ensue. About forty towns are destroyed and thousands of the people are put to the sword. On April 23, a commission appointed by the Sultan, who is protected by the Treaty of Berlin, but driven by the civilized opinion of the world, begins its sittings in Constantinople to devise a scheme of administrative reform.

1896. The Armenian horror leads to a renewal of the **Cretan agitation,** and a rebellion headed by native revolutionists and other filibusters breaks out in the Island. Civil war ensues, and an effort is made by the national party to transfer Crete to the kingdom of the Hellenes. Meanwhile the Porte promises reforms, and the consuls at Canea are appointed a commission to carry the reforms into execution.

1897. Greece declares war against Turkey, on behalf of the Cretans, but is disastrously defeated.

1901. Owing to long-continued delays in the promised settlement of certain French claims aggregating some $15,000,000, **France withdraws her ambassador** from Constantinople, August 27, and late in October sends a fleet to enforce her claims. **It seizes Mytilene,** November 5, and takes possession of the customs. Turkey then yields to all the French demands, sending first payments on some of the claims. Diplomatic relations are resumed, November 23.

Miss Ellen M. Stone, an American missionary, with Mrs. Tsilka, her as-

sistant, is **captured** by brigands, September 3, in the mountains between Bulgaria and Turkey. A large ransom is demanded.

1902. Miss Ellen M. Stone and Mrs. Tsilka are released, February 23, after the payment of a ransom of nearly $75,000.

1903. Serious outbreaks in Macedonia (vilayets of Monastir, Saloniki, and Adrianople) extend throughout the year. They are said to be fomented by the Macedonian committee in Bulgaria. In February Austria and Russia demand reforms in the administration of Macedonia, which on February 24 the Sultan promises to grant, but the turmoil increases. February 26, the Russian consul at Mitrovitsa is shot. April 30, the Ottoman bank at Saloniki is blown up and martial law declared. August 8, the Russian consul at Monastir is killed.

In November it is reported that **15,000 Bulgarians have been killed** in European Turkey since April 15. The powers, notably Russia and Austria, remonstrate both at Sofia and Constantinople and insist on reform measures, but with little result.

1904. January 6, Bulgaria complains to the Porte that the promised reforms in Macedonia are not being carried out. January 13, the **Porte accepts Macedonian reform scheme** of Austria and Russia. April 8, the Turco-Bulgarian convention is signed. This pledges Turkey to try the reform plans, and Bulgaria to check revolutionary movements in Macedonia.

In August, American schools are granted the same rights as other schools, thus settling a long dispute. In bringing this about an American squadron is ordered to Smyrna.

Macedonia is comparatively quiet during the year, but the revolutionist leader declares the reform scheme a failure. Conditions in Armenia become worse.

1905. May 8, the Powers demand international control of the finances of Macedonia. After protracted discussion, November 15, the Powers present an ultimatum to the Porte demanding financial reforms, and giving 24 hours for reply, with notice that refusal will be followed by naval demonstration by an international fleet. November 21, the fleet is ordered to Piræus under command of an Austrian admiral. November 25, Mytilene is seized, the Porte formally yields, and on December 15 the fleet withdraws.

1908. July 24, after a great but quiet show of power in the army by the so-called Young Turks, the Sultan proclaims the **revival of the Constitution of 1876.** Three days later he publicly takes oath of allegiance to the Constitution and orders the election of a Parliament.

August 20, Turkey and Persia settle the boundary dispute. All Austrian officers in the Turkish service are ordered home.

August 21, the government appoints a British adviser for the naval department and a French adviser for the Finances.

August 22, the Turkish representatives are recalled from Belgrade, Berlin and Vienna.

September 25, Turkey appeals to the Powers against the occupation of the Oriental railway by Bulgarian troops.

October 10, a **boycott** is begun at Constantinople **against German and Austrian goods.**

December 17, the **Sultan opens the Turkish Parliament** with great splendor amid general rejoicing.

1909. January 12, Turkey accepts the offer of Austria-Hungary to pay $10,500,000 and grant certain concessions as indemnity for the annexation of Bosnia and Herzegovina. A protocol is signed February 26.

January 29, Bulgaria complains to the Powers of the attitude of Turkey.

February 13, Parliament votes no confidence in Kiamil Pasha, Grand Vizier, who at once resigns. February 14, the Sultan accepts his resignation and instructs Hilmi Pasha to form a cabinet.

April 13, the garrison in Constantinople mutinies, forcing the resignation of the Grand Vizier, the Minister of War, and the President of the Chamber.

April 14, Tewfik Pasha as Grand Vizier forms a new cabinet. April 17, the "Committee of Union and Progress" influences the Third Army Corps to march on Constantinople from Saloniki.

April 19, the **Turco-Bulgarian agreement is signed** at Constantinople, Bulgaria agreeing to pay $16,400,000.

April 24, the Constantinople garrison surrenders to the troops from Saloniki.

April 27, **Abdul-Hamid II. is deposed,** his brother, Mohammed Reshad, being proclaimed sultan as Mohammed V. The next day the deposed Sultan is removed with a portion of his harem to Saloniki, where he is kept a prisoner.

April 29, after summary court-martial, 250 persons are executed at Constantinople. During the next few days many other executions take place.

May 5, **Hilmi Pasha becomes Grand Vizier** and Mollah Sahib Sheik ul Islam. May 10, Mohammed V. is girded with the sword of Osman. Meanwhile there are riots and atrocities in Asiatic Turkey, especially at Adana.

June 10, Turkey asks the Powers to reconsider their decision to evacuate Crete at the end of July, which request is granted on June 15.

June 13, twelve Turkish battalions in northern Albania repulse the attack of ten thousand Albanians.

December 30, **Hakki Bey** succeeds Hilmi Pasha as **Grand Vizier.**

SAMOS.

Samos, area about 200 square miles, population about 60,000, is a mountainous island in the Ægean Sea, lying near the coast of Asia Minor and southwest from Smyrna. The Turks exterminated the inhabitants in the fifteenth century and it was abandoned by all for over a hundred years. Afterward repopulated, the Samians took a heroic part in the Greek War of Independence and the Turks were unable to overcome their resistance. In 1832, on the conclusion of peace, Samos was erected by France, Great Britain and Russia into an autonomous principality and placed under the sovereignty of the Sultan, to whom it pays an annual tribute. Except that the Sultan appoints the Prince of Samos, the island is self-governing. Wine, olive oil and tobacco are produced. The inhabitants, almost exclusively Greeks, are industrious and enterprising. Vathy, the capital, was one of the first towns in the East to introduce the electric light.

CRETE.

Crete, a province of the Eastern Roman or Byzantine Empire, was seized by the Venetians in the thirteenth century during the fourth crusade. They held it for about four hundred and fifty years. In 1669 it was conquered by the Turks. Its capital, Candia, surrendered only after an intermittent siege lasting twenty-five years, the longest recorded in history. More than 100,000 Turks and 50,000 Venetians were slain in the attack and defense of the city. The Turks were never able to subdue all the island and resistance was always maintained in the mountains. During the last eighty years of the nineteenth century, the island was in incessant insurrection. In 1896 the Cretans seemed likely to succeed, but the great powers interfered in behalf of Turkey. Soon, however, the powers changed their policy and compelled the Sultan to acknowledge Crete as an autonomous province, which, while nominally subject to Turkey, should pay no tribute and should have as ruler, under the title of High Commissioner, Prince George, son of the King of the Greeks.

According to the Cretan constitution of February 21, 1907, there is a Chamber called the Boule, of 65 members, elected, one for every 5,000 inhabitants, and for a term of three years. A longing for union with Greece is, next to their love for freedom, the strongest passion of the Cretans. In October, 1908, the Boule at Canea proclaimed the union of Crete to Greece and declared that hereafter Cretan affairs will be conducted in the name of the government of Greece. This action was not acceptable to the powers and the island is still nominally under Turkish sovereignty.

The ordinary occupation is agriculture and next in importance is the raising of sheep and goats. Since 1896 much progress has been made in education.

Crete is a rugged island with an area of 3,365 square miles. The inhabitants in 1900 were 310,185, among whom there were 6,113 foreigners, 728 Jews, 33,496 Mussulmans. The rest, 269,848, were Christians. Since 1890 the Christian element had increased 62,256, and Mussulmans decreased 39,955.

ARABIA.

Arabia is an enormous peninsula of over one million square miles lying between the Red Sea on the west, the Gulf of Aden and the Indian Ocean on the south, and the Persian Gulf on the east. Since the keys of the two Holy Cities, Medina and Mecca, were brought to Sultan Selim I., in 1517, it has been regarded in Europe as tributary to Turkey. But the Turks have never exercised authority except in the provinces of Hejaz and Yemen which stretch along the Red Sea. Even there their control has often been disputed by the Arabs, sometimes with success. Turkish Arabia has an extent of about 170,000 square miles and hence includes only one sixth of the peninsula. The extreme southwest corner is the British protectorate of Aden and the southeast corner is the Sultanate of Oman, in which British political influence is predominant. Inclosed by these narrow coast fringes is the wide and semi-desert interior region, given over to the tribes embraced under the comprehensive name of the Bedouins. Some of the Bedouins dwell in fixed habitations. But the greater number are shepherds and herdsmen, who live a nomadic life and whose favorite pastime is the sacking of villages and the robbery of caravans. They are ignorant and fanatical, profoundly disdainful of all men but themselves. Each tribe, whether nomad or settled, is ruled by its sheik. The boundaries of the tribes are determined by tradition, and, save in case of tribal war, are rigorously observed. The Bedouins, like practically all the people of the peninsula, are Arabs. Except along the Persian Gulf and the boundaries of Persia, all are orthodox Mussulmans. Slavery is a deep-rooted institution, and the slave trade is still carried on in the interior and through the seaports.

In the vilayets or provinces of the Hejaz and Yemen Arab life is found on its highest plane. The people are tall, lithe, sinewy and well formed. They are brave, hospitable and polite to each other but endeavor to exclude foreigners. In the Hejaz are the two sacred cities, Mecca, where the prophet Mohammed was born, and Medina, where he died. The Arabs, who claim descent from Ishmael and Abraham, attach many sacred legends to the locality. A railroad, which is now being constructed by the Turkish government from Damascus to Medina, will in time break down the wall of separation which protects the Holy Cities from the presence of the non-Mussulmans.

The productions of Arabia are tropical or semitropical and tend rather to decline than to increase.

TRIPOLI.

Tripoli and the adjacent sanjak of Bengazi constitute two vilayets and are on the same plane politically as the other thirty-six vilayets of Turkey. They are the only remaining African provinces of the Empire still under the absolute rule of the sultan. Within this dominion are included Barca on the east and Fezzan on the south. The country has the same general character as the whole north African border, though a meager rainfall distinguishes it from Egypt. The region is one of arid lands with several fertile valleys and many oases. There is not in Tripoli a single stream that carries water the year round.

The people of Tripoli are composed of two races, Arabs and Berbers. The latter were conquered by the former in the seventh century, but they have always remained the more numerous class. There has been much ethnic mixture, and the Berbers in many places have adopted the language and manner of the Arabs. In the mountainous regions of the interior the Berbers have maintained their ancient character, customs, and organizations. It is from this region that the insurrections spring which have caused so much trouble.

Tripoli was converted into a province of five districts over each of which was appointed a motessarif or lieutenant governor. The city of Tripoli was occupied by a Turkish garrison. The judicial and commercial system of the Turks was introduced, and a system of taxation established under officers in Constantinople. The Turks, however, who are only a small minority, hold themselves aloof from the people whom they govern. The Tripolitans in general are unprogressive, abjectly superstitious and half-barbarous. The people of the interior have affiliated with the Sudanese in their long-continued struggle against the foreign domination in Egypt. The army of El Mahdi was reënforced with wild men from the interior of Tripoli, and the Caliph of the Sudan, who at the close of the last century fought against the combined forces of Great Britain and Egypt, drew his volunteers from the same source.

Conquered by the Turks in the sixteenth century, the Tripolitan beys regained their independence, made Tripoli a nest of corsairs and terrorized the Mediterranean. Some of the European powers paid them tribute and they were first successfully resisted by the United States in an intermittent war lasting four years. In 1835 the Turks invaded and reduced the country to subjection a second time.

Area, with Bengazi, 398,000 square miles. Population about 1,000,000.

URUGUAY.

Uruguay was originally settled by a Spanish colony from Buenos Aires. Portugal claimed the territory, to which it abandoned pretensions only after being defeated in war by Spain. After the overthrow of Spanish authority in South America, Brazil, as heir of Portugal, by force asserted rights to the country. The war lasted two years. Great Britain intervened and peace was secured by the cession to Brazil of the territory called the "Seven Missions."

Then came a bitter war with Buenos Aires. This time both Great Britain and France interfered and a treaty of peace was made. Shortly afterward two provinces joined the dictator Rosas and hostilities began anew. At last in 1859 both Brazil and the Argentine confederation recognized the independence of Uruguay. The state was dragged into war with the dictator Lopez, but otherwise in the last fifty years there has been little of outside importance in its history.

Uruguay has a constitution, a president and two houses, is occupied mainly with agriculture, is Roman Catholic in faith but tolerant of all beliefs, renders primary education obligatory and has a goodly number of higher schools and an excellent university at Montevideo. It is a progressive state. The peace strength of the army in 1907 was 280 officers and 5,283 men.

The area is 72,210 square miles and the population in 1906 was 1,103,040.

VENEZUELA.

On the coast of Venezuela Columbus first touched the mainland of the New World. There Ojeda, most reckless of Spanish captains, noted the features of Indian life, found houses built on piles, and, thinking of Venice, named the new land Little Venice — Venezuela. Las Casas, the holy man, settled Cumaná and began his missionary work. The natives, in 1522, obliterated his colony. But Spanish settlements kept on increasing. The natives were attacked and either destroyed or reduced to slavery. Caracas was founded in 1567, two years after the settlement of St. Augustine in Florida.

The Spanish province being once established became subject to New Granada under a captain general, appointed by the home government. This relation, though not without vicissitudes, was maintained until the nineteenth century. In 1810, as soon as it was known that the House of Bourbon had fallen in Spain, Venezuela revolted. A democratic republic was about to be established under the leadership of Miranda when the great earthquake of March 26, 1812, rocked the country to its foundations and destroyed the capital, Caracas. The people believed the earthquake was a divine judgment on account of their rebellion, and, for a time, the patriot movement subsided. Again the patriots rallied, obtained control of the state and made it a part of the Colombian Union. Simon Bolivar, himself a Venezuelan, was elected president. The Spanish authorities did not yield until Bolivar won the battle of Carabobo, June 24, 1821, by which the dominion of Spain was extinguished. Seceding from Colombia in 1830, there ensued eighteen years of comparative political peace followed by almost incessant turmoil until 1864. Then the federalist party, having defeated the unionist party, caused the adoption of a new constitution. Don Guzman Blanco, after three years' dictatorship, was, in 1873, elected constitutional president.

The serious boundary dispute with Great Britain invests the recent history of Venezuela with special interest. British claims had been established to a part of Dutch Guiana long before the secession of Venezuela from Colombia, but definite boundaries had not been fixed. The Royal Geographical Society, in 1835, authorized Robert H. Schomburgk to draw up a map of the British possessions, which he did, making the river Amacura the northern boundary and the Cotingu the divisional line from Brazil. This map Great Britain subsequently claimed as correct and authoritative. Venezuela, alarmed at the British claim, in 1841, sent Dr. Fortique to London to present the counterclaim of the republic. The ministry then commissioned Schomburgk to set up boundary posts along his line, but denied that this measure was an encroachment.

In 1882, Venezuela, hoping to end the dispute, proposed arbitration and asked the good offices of the United States. Great Britain declared that the matter was not of a kind to be submitted to the judgment of any but herself. In 1888 the government of British Guiana laid formal claim to the territory between Bolivar and Guasipati through which a railway was projected. Venezuela seemed unable to defend her rights. In 1895 President Cleveland of the United States interfered, invoking the "Monroe Doctrine" as his warrant. That doctrine was, in brief, that no European power or combination of powers should forcibly deprive any American state of the right of self-government or should despoil it of territory. Lord Salisbury refused to acknowledge this doctrine, and the friendly relations of the two great English-speaking powers were seriously strained.

The government of the United States appointed a commission to determine what were the true boundaries of Venezuela. The discovery of rich deposits of gold in the Barima district on the Cuyuni intensified the controversy. Before the American Boundary Commission was able to report a true boundary, it was agreed, in 1896, that the dispute should be finally decided by a court of arbitration, in which Great Britain and Venezuela should be equally represented. To this, all matters in controversy were to be submitted, *except* that any British settlements in the disputed country, if such settlements had existed for fifty years, should be *prima facie* proof of British right to the territory included with such settlements. The Arbitration Tribunal presented its award in October, 1899. In the preceding August President Andrade was deposed by General Cipriano Castro, who was then elected to the vacancy. Reëlected in 1905, President Castro's term was to expire in 1911. Under him the relations of Venezuela with various foreign powers had sometimes been strained almost to breaking, but the President showed some astuteness in dealing with both domestic and foreign difficulties. While he was absent in Europe in 1908 a revolution occurred by which the vice president, General Gomez, became president.

Government. The present constitution was formed in 1904. Venezuela is divided into thirteen States, each of which has its own executive, legislative and judiciary. The general Congress consists of a Senate, to which each State, by its legislature, elects two members for a term of six years; and a House of Representatives on the basis of one representative for every 40,000 inhabitants. The President and two Vice Presidents are chosen by electors appointed by Congress. The executive function resides in the President and the six State Ministers appointed by him.

Industry and Labor. Venezuela is rich in gold, iron, copper, and silver. Sulphur, asphalt, petroleum, coal, lead and tin are found. The vast forests with variety of tropical timber are almost untouched. They are the property of the government.

Religion. Roman Catholicism is the state religion, but all faiths are tolerated. The Archbishop of Caracas is primate.

Education. There are 1,330 elementary schools. The completion of the primary grade is compulsory. Schools of higher grade include 33 national and some private colleges. The Central University is at Caracas, and the University of Los Andes is at Mérida.

Defense. The standing army consists of about 10,000 men. The navy comprises 3 gunboats and some smaller vessels.

The area is about 364,000 square miles. The population in 1907 numbered 2,646,835.

1498. August 1, Columbus first touches the mainland on the Venezuelan coast.
1567. Caracas is founded.
1810. The Venezuelans revolt against Spain.
1812. March 26, an earthquake destroys Caracas, and devastates the country.
1821. June 24, the victory of Bolivar at Carabobo delivers northwestern South America from Spain. **Venezuela becomes part of the Republic of Colombia.**
1830. Venezuela separates from Colombia, resuming its independence.
1841–1895. Controversies with Great Britain over the Venezuelan boundary.
1895. December 17, President Cleveland of the United States sends a message to the American Congress, regarding the boundary dispute and invoking the Monroe Doctrine.
1897. February 2, Great Britain and Venezuela sign a treaty at Washington, agreeing to submit the boundary to arbitration.
1899. October 3, the Venezuelan Arbitration Tribunal gives its award, assigning the mouth of the Orinoco to Venezuela and practically confirming the Schomburgk line.
August 16, President Andrade defeated in decisive battle at Valencia by General Cipriano Castro, who becomes president.
1901. Owing to the sympathy of the Liberal government under President Castro with the Liberal anticlerical revolution under General Uribe Uribe in Colombia, the two countries come into conflict. In August, **Colombian forces twice invade Venezuela,** but are repulsed.
In December General Mendoza and General Matos head a **revolt at home.** Relations with Germany over unpaid claims and with France over confiscation of French estates become strained.
1902. The civil strife continues. In midsummer an arbitration of the French claims is arranged for.
September 24, the **Venezuelan war vessel** *Restaurador*, flying the American flag, obtains a position from which she **bombards Ciudad Bolivar.** After a protest from the United States the act is disavowed and apologies offered. In the week of October 18, after desperate fighting near Victoria, General **Mendoza,** the revolutionist leader, **is defeated** with heavy loss.
November 4, it is officially announced that the revolution is ended.
In December Germany, Great Britain, and Italy unite in demanding an early settlement of claims neglected in the revolution. December 8, they deliver an ultimatum, and the German and English legations leave Caracas. December 9, the **Venezuelan war vessels** at La Guayra are taken and **sunk.** Venezuela arrests British and German subjects in Caracas, but United States Minister Bowen obtains their release. December 13, Puerto Cabello is bombarded. December 19, a **blockade of Venezuelan ports** is declared by Germany and Great Britain. Italy also sends a gunboat.
1903. Through the influence of the United States it is finally decided to submit the **claims of Great Britain, Germany, and Italy,** together with those of various other countries, to **tribunals** composed of a Venezuelan, a citizen of the claimant country, and an umpire appointed by President Roosevelt. Venezuela is to pay advance claims at once to Great Britain, Germany, and Italy, and to pledge 30% of the custom receipts of La Guayra and Puerto Cabello for the early payment of the amounts finally adjudged correct. The question of granting preference to the claims of the blockading powers is referred to the Hague Tribunal. The **blockade is raised,** February 15.
In November it is announced that France is awarded $540,000 on her claim of $3,600,000; Germany $384,000, claim $1,200,000; Great Britain $120,000, claim $225,000; Spain $380,000, claim $2,500,000. Portions of the claims of Great Britain and other countries are still unsettled.
1904. February 22, the **Hague Tribunal decides** that Great Britain, Germany, and Italy should have the preference in the payment of the Venezuelan claims. Much dissatisfaction with this award is expressed at the opening of the Venezuelan Congress, March 1.
May 5, President **Castro is given full dictatorial powers** for one year.
The seizure of foreign asphalt concessions and the expulsion of an American editor cause much irritation. The United States and Great Britain protest.
1905. February 16, the Supreme Court reaffirms its decision against the American Asphalt Company. March 14, President Castro refuses American demand for arbitration of asphalt controversy. May 23, President Castro decrees amnesty to all exiles and to political prisoners not above grade of colonel. June 3, General **Castro is reëlected president** for 6 years.
1906, 1907. These years are unsettled and troubled because of the precarious health of the President and of complications with foreign powers.
1908. March 14, the Supreme **Court fines the American Asphalt Company** $5,000,000 on the charge of having contributed to the recent rebellion.
April 21, the bubonic plague appears at La Guayra.
June 23, America severs diplomatic relations because of the failure of President Castro to satisfy American claims.
July 9, the Venezuelan chargé d'affaires is recalled from Washington.
August 27, the Supreme **Court imposes a fine on the French Cable Company** of $5,000,000 on charge of having aided the late rebellion.
December 10, President Castro arrives at Bordeaux, having left Venezuela in November for the sake of consulting a European specialist.
December 21, **revolution overthrows the government** of President Castro, and the vice president, General Juan Vicente Gomez, succeeds. Efforts are at once made to establish amicable relations with the foreign powers.
December 24, José de J. Paul, ex-Minister of Foreign Affairs, embarks for Europe to negotiate with France and Holland for the settlement of disputes.
1909. January 4, ex-President Castro undergoes an operation at Berlin for kidney trouble. January 19, a protocol for the settlement of disputes between the United States and Venezuela is practically agreed upon.
March 23, the Venezuelan government declares that ex-President Castro, who is returning from Europe, will be arrested if he lands in Venezuela.
April 6, Great Britain decides not to allow him to land at Port of Spain.
April 10, France expels him from Martinique and, April 11, Denmark declares he will not be allowed to reside in any of its West Indian possessions. He returns to Europe.
May 4, President Taft at Washington grants an audience to Minister Rojas, thus reëstablishing diplomatic relations with Venezuela.
June 2, a preliminary treaty is signed at Caracas with Colombia, which agrees to cede territory on the Orinoco, Inrida, and Negro rivers.
July 12, Castro renounces all right or claim to the presidency.
August 11, Gomez is elected provisional president by congress.

THE UNITED STATES OF AMERICA.

The country and its aboriginal inhabitants. The beginning of the history of the United States must be looked for in Europe. There had been indeed from a remote antiquity a race of men scattered over the country now included in the Union, but they had scarcely changed the character of the country more than the wild beasts which they hunted; here and there they had tilled the ground a little; they had built light boats in which they traveled on the rivers or pushed out a little way into the ocean; they had baked a few rude utensils, and constructed houses for shelter which could be taken down and carried away whenever the roving home was changed; they had sharpened those senses which they had in common with animals, and the eye and the ear were trained to exceeding cunning; in their contest with n ture they had learned endurance; in the loneliness of the wilderness they had learned silence; the ties of blood had effected a rude tribal relation, and a dim sense of justice and right mingled with the easily understood claim of a strong arm and a resolute will. The men who reached the highest point of animal courage and cunning became the chiefs, and took their names from the beasts which they overcame; the women were scarcely more to them than the nurses of their children and the drudges of the wigwam. They spoke a language, with various dialects, which was pictorial whenever it ventured beyond the expression of the simplest idea, and they drew from the operations of nature the outward form of a meager mythology which, it may be, embodied the faint revelations of an eternal life. There are some signs of races in the country, especially in the southwestern portion, antedating the red men, and possessed of a higher order of mind, but science has not yet reduced these signs to a clear and positive system. There was nothing in the life of the roving tribes which answered to the command to "be fruitful and multiply and replenish the earth and subdue it."

Voyages of discovery. Three thousand miles separated the American continent from Europe, but the ocean, which now is a highway facilitating passage from one shore to the other, was then a barrier practically impassable, a vast waste which kept a whole world concealed. Until the middle of the fifteenth century the seaman had no means of ascertaining the exact position of a ship out of sight of land, and navigation consisted in creeping from one headland to another, or pushing out almost by guesswork to islands lying off the coast. Yet there had been from early days dim visions of unknown countries lying beyond the seas, and in the far north the hardy and half-savage **Norsemen** had found **Iceland** in the ninth century, being blown across to it, and later, by a similar accident had come upon **Greenland.** They occupied Iceland and had occasional settlements in Greenland; it is even believed by many that about the year 1000 these bold rovers of the sea skirted the northeastern coast of what is now Canada and the New England States, but it is certain that their adventures had no influence upon the future of either continent, unless, as is sometimes claimed, their report of discoveries long after fell upon the ears of men who had begun to look eagerly in the same direction.

The Europe of the fifteenth century was very different from that of the eleventh. The discoveries and inventions of the science of that day, which enabled men to build ships and to sail them out of sight of land, were only a part of a great awakening which was felt in heart and mind. There was a rediscovery of the old world of Greek and Roman history and literature and art; the tyranny over the consciences of men was breaking down; the cities were acquiring wealth and order, and the great nations of England and France were rapidly becoming powers which owed their strength to the people rather than to the ruling families. There were two other maritime countries where the conditions were favorable in another way. Spain and Portugal were not yet drawn into the great movements of modern civilization, but the royal families there represented the completest idea of power, untroubled by popular life, but stimulated by a close alliance with the church. In place of the religious agitation elsewhere, here was a religious enthusiasm which consolidated the royal power, and made its adventures in search of greater wealth have the appearance of a crusade in honor of religion and for the glory of the church.

In **Spain and Portugal,** more than in other countries, wealth was sought, not by the development of industry at home, but by a search in distant lands; India and the less known China and Japan were looked upon as the great treasuries of the world, and for a long while navigators and explorers bent their energies toward the **circumnavigation of Africa,** seeking a passage by sea which would remove the enormous difficulties attendant upon the journey eastward by land, and by a series of bold and perilous voyages, scarcely inferior in hardihood to those soon to be taken across the Atlantic, they had by the close of the fifteenth century outlined the western coast of Africa, though without yet doubling the Cape of Good Hope, and extended immensely the knowledge of the globe possessed by Europeans. Each new report of the voyagers increased the ardor of scholars and navigators, stimulated the ambition of kings and princes, and fired the zeal of the church.

One man, amongst all, stands forth conspicuously, both because he was the first to make discovery of the New World, and because his discovery was no accident but the result of patient study, deep thought, careful reasoning, practical experience, and high enthusiasm. **Christopher Columbus,** a native of Genoa, where he was born in the year 1447 or 1448, had received a good education, but had followed the sea since he was fourteen years of age. He saw many parts of the known world and was familiar with the results of scholarship; he became filled with the belief that he could make his way to India by sailing westward, and that the journey would not be a long one. He was poor, and tried in vain to persuade his townsmen, and then the Portuguese, to aid him; at length, after many rebuffs, he gained the confidence of Ferdinand and Isabella, king and queen of Spain, and set sail from Palos, Spain, August 3, 1492, with a little fleet of three vessels, the largest not more than a hundred tons burden. He was detained at the Canary Islands until the 6th of September, when, with an unwilling crew, he set forth over the trackless, unknown water. The faith of Columbus was supreme over all the discontent and unbelief of his comrades, and on the 12th of October the great discoverer, clad in complete armor, and bearing the royal banner of Spain, accompanied by his captains and some of the crew, landed upon a small island, an outpost of the western continent, and after falling upon his knees in thanksgiving, named the land **San Salvador,** and in the presence of the islanders took possession of it in the name of the Spanish monarchy.

On this voyage the neighboring islands, including Cuba and Haiti, were touched at and added to the Spanish dominion, and then Columbus returned to Spain to disclose the great secret which had been hidden from the world. Yet neither he nor his companions knew the extent of their discoveries. They thought they had come to the western coast of India, and the islands received the name, which they still bear, of the West Indies, while the natives were called Indians. Three other voyages were made by Columbus, in which the islands of the Atlantic and the Gulf were further explored, and an impetus given to voyages of discovery, but it does not appear that Columbus himself ever stepped upon the continent or knew that he had seen a new world. The knowledge of the discovery spread quickly over Europe, and in 1497 **John and Sebastian Cabot,** father and son, of Venetian birth, then living in Bristol, England, undertook a voyage of adventure, of which John Cabot was probably the leader, and made Cape Breton; the next year Sebastian sailed along the coast of North America as far southward as Albemarle Sound. To Columbus belongs the honor of the first discovery of a new world, to the Cabots that of first entering upon the continent, while to a Florentine, **Amerigo Vespucci,** who sailed in 1499, is probably due the name of America, given by a geographer and printer who published Vespucci's travels, though it is the belief of some that the name became common through the use of it by sailors, who had heard the title Meric given by natives to a conspicuous gold region in Central America.

Slowly the map of the coast of North America was constructed by successive voyagers, sailing chiefly under the auspices of the Spanish, English, and French crowns, while fishermen of various nations began to flock to the great fishing grounds off the Grand Banks and along the coast of Newfoundland and Nova Scotia. In 1506 **John Denys** of Honfleur explored the Gulf of St. Lawrence; in 1512 **Ponce de Leon** discovered Florida, while searching for the fabled fountain of immortal youth; the next year **Balboa** crossed the isthmus of Darien and discovered the Pacific Ocean; the great fact of a western continent was made certain when the fleet of **Magellan,** sailing from Seville in 1519, by a three years' cruise circumnavigated the globe and returned to Spain; in 1524 **Verrazano,** sailing for the king of France, is said to have followed the coast more completely than the Cabots; in 1534 and 1535 **Jacques Cartier** sailed up the St. Lawrence and got a glimpse of the country now called Canada; in 1541 **De Soto,** one of the greatest of explorers, discovered the Mississippi, and after a series of splendid exploits and terrible disasters, died on the banks of the great river and was buried beneath its waters; in 1579 **Sir Francis Drake,** the English captain, explored the Pacific coast and discovered San Francisco Bay; in 1609 **Henry Hudson,** sailing for the Dutch East India Company, made his way up the river which has since borne his name. All or nearly all these discoverers still were possessed with the desire to get to India; when they penetrated the continent of America they were seeking a way through to the rich Cathay (China) beyond, and it was a hundred years before Europe became aware that a new world had been found which was separated as completely from the eastern shores of Asia as from the western coast of Europe.

The first colonies. For nearly two hundred years the great continent of North America was scarcely more to Europe than a strip of seaboard territory with unknown wilds behind it. Each discoverer took possession for his sovereign of the country which he found lying between certain parallels of latitude, without vexing himself about degrees of longitude. Conflicts arose in the courts of Europe about the rights of possession; the charts and maps were confused and contradictory, and though for many years disputes were maintained as to ownership, the practical solution was reached through the several actual possessions which were taken by subjects of the different sovereigns, and by the wars which took place both in Europe and America. Immediately after the discoveries by Columbus, **settlements** were made in the islands of the West Indies by the Spaniards, and governors were sent out; the colonies were military and ecclesiastical posts, and the two ends which were kept in view were the working of gold mines and the bringing of the natives into subjection to the church. The Indians were made to understand that gold was the great object sought for, and they found the newcomers ready listeners to their tales of fabulous riches in the interior; the settlements were thus regarded chiefly as bases from which to make expeditions, and whatever gold mines were found, the Indians were set to work obtaining the precious metal, while the soldiers were busy planning new discoveries and conquests. Meanwhile the priests gloried in the additions which they were making to the church; everywhere, supported by the strong arm of the soldier, they baptized the Indian and impressed upon him the rites and observances of their religion. At first the Indians of the south, who were of a mild and gentle character, looked with admiration upon their conquerors and rendered a willing service, but the Spaniard, in his insatiable greed and restless ambition, quickly turned the willing service into forced slavery, and it was not long before the Indian, when he was not the Spaniard's slave, became his treacherous foe.

The Spanish rule was supreme about the Gulf of Mexico and along the Florida coast. Forts and armed settlements were scattered along the shore and among the islands. Meanwhile the French were the nearest neighbors toward the north. In 1562 **Admiral Coligni,** the leader of the French Protestants, or Huguenots, sent out a colony which sought a place at Port Royal in South Carolina, but the colony was a failure; two years later a second colony was established on the St. Johns River in Florida, and this became the nucleus of a growing settlement. The Spaniards looked upon this not only as an encroachment upon their territory, but as an offense against the church, and visited the colony with terrible destruction. In return a French soldier, **Dominique de Gourgues,** retaliated by a sudden and fierce descent upon the Spanish settlement. The French found no footing here, but they were more successful in the far north and in the upper valley of the Mississippi. With them, too, the priest and the soldier were the pioneers. Under the lead of a succession of brilliant captains, of whom **Champlain** was the greatest, the French ascended the St. Lawrence, occupied Acadia, founded the fortress of Quebec, discovered Lake Champlain and Lake Huron, and made their way to the Ohio and Mississippi. They found the Indian a different savage from his fellow in the south. Fierce, keen, warlike, he opposed the Frenchman, who learned, however, to set one tribe against another, and by intrigue as well as by courage to make himself master of the country. The priest was usually a Jesuit, who united an indomitable zeal to a personal devotion and spirit of adventure,

and his fiery faith took strong hold of the savage. But the French settlements were trading posts, and the colonies were dependent largely upon the skill with which they could control the valuable fur trade. There was scarcely any attempt at farming, there were not many women, nor was there much family life, and the French occupation continued down to a late date to be merely a cordon of military posts, which furnished a vantage ground, especially through the aid of the Indian tribes, for disturbing the English colonies and settlements.

The great colonizing movement was from England. In the reign of Queen Elizabeth a strong jealousy of Spain was felt among Englishmen. That country was looked upon as a great rival on the seas, and as the right arm of the papal church which still held ascendency over a large body of Englishmen, and was seeking to regain entire control. The success of the Spaniards in the Gulf of Mexico and on the Florida coast, a success which was inflated by men's imaginations, stimulated English enterprise, and as the national force was less concentrated in the crown, so the colonies which began to be sent out from England were the creation of nobles and merchants, with now and then a participation by the crown, and always an assumption that the colonies were occupying land which belonged to the crown and could only be possessed by those who held royal patents or charters. There was no lack of material for colonies. The wars and the great social upheaval incidental to the end of the Middle Ages had produced a large number of adventurers and vagrants. Then the **Protestant Revolution** had changed the face of religious England, and there were many dissatisfied with the constituted church who, in despair of bringing it over to their views, looked to the New World for the opportunity of making practical experiment of their theocratic beliefs. They sought to erect a **new** England in America in the fear that the **old** England was taking a backward step. Thus, as the Spanish adventurers in the south mingled a religious enthusiasm for the papal church with their dreams of conquest and riches, the English colonists in the north had their commercial ventures strongly affected by a zeal for a religion which was antagonistic to the Church of Rome.

The first English colony which took root in American soil was planted in Jamestown in Virginia, by what was known as the London Company, in May, 1607. The early years of the colony were full of difficulty, owing, in part, to the dependence of the settlers upon England for their stores, and to the cumbrous government which was divided between persons in Jamestown and persons in London. Thirteen years later, in 1620, a small company of men and women, who had been living in Holland in exile from England owing to their religious convictions, which were repugnant to the Church of England, obtained the right from the English government to plant themselves in America. These exiles, or Pilgrims, as they called themselves, set out for Virginia, but were turned aside from the first intention and led to establish themselves at **Plymouth, Massachusetts,** where they occupied what was long known as the Plymouth Colony. Ten years later still, in 1630, the shores of Massachusetts Bay began to be settled by English colonists, and the town of **Boston** was founded. The colony here established brought with them a charter by which they claimed to have almost entire power of self-government. The leaders belonged to the Puritan party in England, and in the ten years which followed twenty thousand people joined this and the neighboring colonies of New England, many of them educated and substantial men who chose a home in the New World because, being out of accord with the church at home, they hoped here to have liberty to exercise their beliefs.

The Dutch had sent out vessels to trade with the Indians for fur, and voyages were made chiefly to the bay of New York and up the Hudson River; in 1621 the West India Company was incorporated, and in 1626, after one or two settlements had been made at Albany and on Long Island, with a post on Manhattan Island, this last-named place was made the center of the colony, and year by year with slow increase New Amsterdam, afterward to be called New York, grew into importance and was the seat of the commercial power of the Dutch in America.

Neither Protestant dissenters nor Roman Catholics were comfortable in England, and as the former made for themselves a home in Massachusetts Bay, so the latter formed an asylum on the Chesapeake, where in 1634 came a company organized by **Lord Baltimore,** and bringing with them a charter which gave practical independence of the crown, the right of self-government to the people, freedom from taxation by the crown, and a religious liberty unknown in any other of the colonies. This company was the foundation of **Maryland.**

In 1681 **William Penn,** an eminent Englishman who had espoused the cause of the Quakers, was led by the misfortunes of these persecuted people to found a colony on the banks of the Delaware. Scattered settlements already existed there, but these were brought within the jurisdiction of Penn, who had obtained a charter which gave him almost unrestricted power. He used his power by at once incorporating a government by law under which the rights of every colonist were carefully guarded, and justice was sought to be done to Indian as well as white man. This colony, **Pennsylvania,** drew emigrants from all parts of England and very early attracted companies also from Germany.

Colonial growth. The Spaniards in the extreme south, the French in the extreme north, held only military occupation; the Dutch in the center, who had mastered a little settlement of Swedes in what is now New Jersey, were themselves in 1664 crowded out by the English, who pushed upon New Amsterdam both from the north and the south, and the Atlantic seaboard from Maine to South Carolina was then under control of Englishmen. For a hundred years these colonies grew in their separate homes, receiving accessions from Europe, pushing their farms further into the wilderness, sending out families and companies to form new settlements and governments, as North Carolina and South Carolina were settled from Virginia, and slowly taking on individual and separate characters, according to the nature of the people who composed them and the conditions under which life was constituted.

The geographical variations had something to do in determining the character of the several colonies. The vast forests, the good harbors and the extensive fishing grounds of **New England** combined to stimulate shipbuilding, commerce, and fisheries, and to make Boston especially a great trading town. Since it was most convenient to England and the center of the largest English interests, it afforded a chief port for communication with the other colonies and with the West Indies. The sea was the field for the industry of great numbers of its inhabitants, and a spirit of enterprise and adventure was rapidly generated. The hard, unyielding soil was cultivated for the support of those immediately living upon it, and only in the valley of its principal river could farming be called profitable. The shipping interest stimulated, also, certain kinds of manufacture, as that of shipbuilding and of cordage, while the direct trade with the West Indies led to the establishment of distilleries. The farms were in a measure independent of the towns, and the farmer was his own mechanic, but the town life gave support to the several trades, and a foundation was laid for the manufacturing interest of a later date.

In **New York** the rivers and lakes afforded easy access to the Indian tribes in the interior, so that the fur trade formed an important part of the pursuits of life, while the rich fields of the river bottoms and the interior drew people into the wilderness, and scattered the population. The natural advantages of the island of New York were slowly discovered, and in the absence of a vigorous settlement in the immediate neighborhood commerce flowed to the port in a sluggish manner. In **Pennsylvania,** again, the exceeding fertility of the soil made agriculture the leading industry; the mineral wealth of the country had not yet been discovered, and the distance of Philadelphia from the sea delayed its importance as a seaport. In **Maryland** and **Virginia** the early discovery of tobacco had largely determined the employment of the colonists, and led to the importation of slave labor, the carrying of the slaves being chiefly in the hands of New England shipmasters.

The life of the colonists was thus largely formed in agricultural pursuits, and, in the case of New England, in the following of the sea, with all its connected industry. But agriculture in a new country carries with it the incipient development of many industries. The remoteness from towns and centers of trade laid a necessity upon the isolated settlements and families, by which they learned many arts, as of house building, the making of tools and of clothing, and above all encouraged a spirit of self-reliance and of mutual dependence. Every one was obliged to work; the forests had to be cleared, and the farms to be broken; there was no place in the struggle with nature for sloth, and men learned in the loneliness of the new clearings to bring into use all their faculties. Then, since there was no body of hired laborers to be called upon, the work, like the raising of houses and barns, and the gathering of harvests, which required coöperation, was carried out by mutual assistance, and a bond of association was established even over wide localities.

The **composition of the different colonies** helped to determine their character. The main element in New England, as we have seen, was in the English emigration at a time when the Puritan party was driven to the wall by the ascendant Church party at home. There was a large infusion in it of educated men, and the direction of public policy was in their hands for the greater part of the time before the Revolution. The things they cared for most were kept in view in legislation, and churches and schools and colleges had conspicuous attention, while the laws which were made aimed to keep the state under the control of religious-minded men. The constant reference to religion in the discussion of public affairs, and the encouragement of individual examination of the profoundest problems in life, tended to keep the community always in a restless, intellectual condition, which was further stimulated by the contact with the world which trade and commerce brought. The great factor, however, in New England social and political life was the **town meeting** and all that this involved. The town was the political unit, and as such was represented in the legislature. The people, with few exceptions, took part in all the business of the town, and the young man grew up under the education which the frequent gatherings gave. He heard the discussions upon matters of common interest. He voted and was voted for, and any one with capacity for leadership could learn the art of government in a range of offices from hogreeve or fence viewer to selectman, from representative in general court to governor, until this last officer was appointed by the crown. In all the vicissitudes of English rule in New England, the government of the local community remained in its own hands, and formed a school for political thought and administrative execution. The distinctions of rank were almost entirely constituted by the election of the people, who chose even the officers under whom they served in the military organizations.

In **Virginia** and its sister colonies there were more distinct lines of social demarcation. At the bottom of the scale was the slave, at the top was the great landlord, while between them were the poor whites and the small farmers. The emigration from England had been more varied than in the North. The upper classes represented sterling English stock, both **Cavalier** and **Puritan;** there was also an important element of **Scotch-Irish Presbyterians** who came over early in the eighteenth century and added especially to the strength of North Carolina and the western frontier; but besides these better elements, there was a baser one in the large number of convicts and ignorant people sent out from England. Power was in the hands of the great landowners, and the possession of great estates, with the control of slaves and dependent whites, tended to develop personal courage and habit of rule in the gentlemen of the colony. The better minds, moreover, had leisure and ease for cultivation; the management of large estates educated them in the art of politics, and the formation of a small, compact class having common interests, concentrating power, produced a landed aristocracy in everything but the name. Society rested upon a base which must not be disturbed, and self-interest dictated a policy which kept the slave in perpetual childhood, and the poor white in ignorance.

In **New York** the Dutch element continued for a long time to give a tone to the colony; it was not easily affected by politics; it accepted the government placed over it, applied itself to comfortable industry and maintained a moderation of life. In the interior the erection of great estates into a semifeudal condition retarded the development of democratic ideas, but, in the absence of a large slave population, the relation between the patroon and his dependents approached a patriarchal character. In Pennsylvania the **Quaker** element predominated, and the wise provision of the founder, aided by the principle of equality which underlies the Quaker doctrine, had given a healthy growth to individual industry.

Indian wars. The European settlers in America had disputes as to what European power owned this or that part of the country, and what were the **boundaries** under the several patents issued by kings, but there were few to acknowledge any ownership in the actual possessors of the soil whom they found there. Now and then a title to land would be confirmed by a deed from an Indian sachem; but the Indian's right to the country was not always regarded. The Spaniard enslaved the Indian and baptized him; the Frenchman traded with him and baptized him; the Englishman crowded him out from his hunting ground, and, now and then, in the person of a devout man, like Eliot or Mayhew or Brainerd, labored to Christianize him. The French were more facile in adapting themselves to the Indian character, and their zealous missionaries gained a strong ascendency over their converts; but the English showed by turns a contempt and a fear which made it rare for the Indians to be at peace with them. At first the newcomers, with their strange weapons and ways, were received with some hospitality; but, as they fortified themselves, and kept extending their farms and villages, the Indians took alarm; the very preparations which the settlers made against attack invited hostility, and the suspicion with which the red man was regarded and treated engendered hatred and cunning. There was something mysterious about the dusky savages, silently coming into the villages and returning to the dark woods, and the Puritan settlers, when they were not trying to explain them as remnants of the lost tribes of Israel, were inclined to make them of nearer kinship with the Devil. Thus these men of the woods were viewed in a half-religious light;

and though the stern lawgivers tried to make them equal with the whites before the law, and punished white men who dealt unjustly with them, yet, when war broke out, the English settlers looked upon the Indians somewhat as the Jews did upon the Canaanites whom they were driving out from the Promised Land.

The most important of the early wars was that known as **King Philip's war,** which broke out in New England in 1675, when a chieftain of more thoughtfulness and skill than others brought the scattered forces of the Indian tribes into a rude command and endeavored to exterminate the English, who, he saw, had dispossessed him and his people of their free occupation. It was too late. The English suffered severely from the first sudden attack; but they had superior intelligence and larger resources on their side; and, combining against the enemy, they broke up the Indian power after a two years' war, killed Philip, sold his son into slavery, and secured a dearly bought peace for the older settlements. The loss of twelve or thirteen towns and six hundred lives long kept the colony in remembrance of the dreaded Indian.

Similar troubles arose in Virginia, and a scattered fight was kept up till the time of King Philip's war, in which the Indians had many advantages through the defenseless and ill-organized condition of the settlers, until finally one of the whites, **Nathaniel Bacon,** rising against both Indians and the royal government, created an insurrection, which ended indeed disastrously for himself, but resulted in putting down the Indians and in constituting a stronger popular government in the colony. The Dutch also had their share of Indian warfare. The collision between the Indians and the whites was a conflict between a savage force and a civilized force, and it was only here and there that the civilized force used its weapons of kindness, tact patience, and justice.

It was not the Indian by himself that the Englishman feared most; the unhappy hostility which arose between them was inflamed by a state of things in which the Indian found himself between two fires. **The politics and wars of Europe** were constantly schemed and fought out **on American soil,** and though there might be a diplomatic peace in Europe, the conflict in America was not always so easily interrupted, since it was scattered and often personal in its character. France and England were great rival powers, each struggling for supremacy, and kept up a series of wars from 1689 until the downfall of Napoleon in 1815. From time to time peace was made, and treaties were drawn up, in which the American possessions of either power in Canada and the West Indies were transferred from one to the other. These wars down to the Revolution had their accompanying struggles in America, which successively, under the several titles of **King William's war** (1689), **Queen Anne's war** (1702), **King George's war** (1744), and **The Old French and Indian war** (1755 to 1763), kept the colonists from the two nations in perpetual broil. The larger settlements near the seaboard, from Boston southward, were too firmly established to be points of attack, but the thinly scattered farms of Maine, the Canadian posts, and the frontier settlements at the West, were constantly familiar with the sound of battle. In this conflict the Indian bore a conspicuous part. His business was hunting and war, not agriculture, and thus he found more agreement with the French soldier. The French occupation was chiefly of a military character and did not trespass so surely upon the Indian territory as did the English settlement, which cleared forests and planted fields and erected villages. Hence the Indian, sometimes alone, sometimes with the French, descended suddenly upon the outlying farms and stockades of the English, and the frontiersman and his family were never free from the apprehension of attack. As the thin line of population moved westward it did so with the ax and spade, but with the musket close at hand. The French used the Indians as light guerrillas, and the English, with less success, tried to pit Indian against Indian, by availing themselves of tribal jealousies and hostility. The best success of the English was when they succeeded in domesticating the Indian and winning him away from his wild associates. These friendly and praying Indians more than once saved English settlements.

Tendencies toward union. The perils from Indian attack and from French aggression gave occasion for the separate colonies to aim at a closer union. **A New England confederation** was formed as early as 1643, and was a slight attempt at union. In 1691 the charters of the separate New England colonies had been recalled, and a Province created with a governor appointed by the crown; the effect was to bring the separate parts into closer union. Post roads began to be built; then the service of soldiers from different colonies in a common cause against the French made men who were separated by long distances known to each other; the fact that all were under English control and that the English Parliament legislated for the American colonies in a body helped to familiarize the people with a sense of their common condition, and in 1754 at a **Congress of Commissioners** called in Albany, Benjamin Franklin brought forward a **plan for the union** of all the colonies under one government. He found that the other commissioners had similar plans, and all agreed that some kind of union was desirable, but some already began to object that the scheme depended too much on the king, while the advisers of the crown thought it too democratic.

The **French and Indian war** closed in 1763, but by this time the need of union began to impress itself upon the colonies on graver grounds, and resistance to English oppression created a common cause. The colonies had been growing in strength and riches and in the exercise through their towns and legislatures of self-government. Meanwhile England from the beginning had treated them with regard mainly to her own exclusive interest. By the successive acts and laws relating to navigation, the colonial ports were closed to every flag but that of England, onerous duties were laid upon exports and imports, manufactures were forbidden or crushed out, and prices regulated to suit the English market. The English, ignorant of the wants and feelings of the colonists, looked upon them only as ministering to their wealth. At the close of her war with France, England was in debt and heavily taxed, and though the colonies had emerged from the war with a burden incurred by their own defense and their important contribution to the common cause, the English government resolved to obtain from them relief, and no longer relying upon the indirect taxation through revenue and the policy of requisitions, now boldly imposed a direct tax in the form of the **Stamp Act,** which provided that all deeds, notes, bills, and other legal documents should be written on stamped paper to be furnished at certain rates by officers of the crown. The act was passed in the spring of 1765, and was to take effect in November, but such was the opposition, taking the form sometimes of riots, that the act could not be enforced and was finally repealed. One effect of the agitation was to bring the colonies again together by their representatives in a **congress in New York** in 1765, when nine colonies were represented by twenty-eight delegates, and a **Declaration of Rights** was made, claiming for the colonies freedom from all taxes not laid by their own representatives.

The discussion of these matters all over the country made the different colonies listen to one another; newspapers began to act as mediums of communication, increasing the sense of a common interest; meetings were held and legislatures took up the debate; but the most powerful engine of union was in the establishment of **Committees of Correspondence,** which were first organized in New York in 1764, and were reorganized in Massachusetts in 1772, and in Virginia in 1773. These committees, composed of the leaders of the people, covered the land with a network of correspondence, by which every part was kept informed of movements in all other parts. Finally, in 1774, came the **first Continental Congress,** called almost simultaneously by the several provinces, and constituting the first of a series of provisional bodies which effected a temporary confederation until the more lasting union was reached.

The revolutionary war. The failure of the Stamp Act only embittered the English government. Another measure was tried and a **tax laid on tea** in such a way as to assume that the colonists were foreigners and not English citizens. The tax was resisted, and the people of Boston having violently destroyed a cargo of tea in 1773, had their port closed by way of punishment. The military force had previously been increased; the presence of the troops angered the people and some blood had been shed in 1770, but the first armed resistance to British troops was on April 19, 1775, when General Gage sent out soldiers from Boston to **Concord** to seize some military stores which had been collected there by the patriots who foresaw war and were actively engaged in preparing for defense. A fight took place at **Lexington,** as also at Concord, between the soldiers and the minutemen, as those of the militia were called who held themselves in readiness for emergency, and some men fell on both sides.

The news excited the country, and the colonies hastened the raising of armies. By the first of May twenty thousand men were in camp about Boston, and a few days later, in the second Continental Congress at Philadelphia, measures were adopted for the organization of an army and navy, and **George Washington** of Virginia was made commander in chief. He was on his way to Boston, when the soldiers encamped on Cambridge Common made a night movement to Charlestown, where a double hill commanded the town of Boston, then occupied by the British forces, and erected a hasty earthwork. The next day, the 17th of June, 1775, the British troops in Boston attacked the works, and after being twice repulsed gained possession. The **battle of Bunker Hill** confirmed the Lexington and Concord fight. On the 3d of July following Washington took command of the American army. A year later, on the 4th of July, 1776, Congress adopted a paper entitled a **Declaration of Independence,** in which the action of the people in resisting the English government was defended before Europe. The thirteen colonies resolved themselves into the United States of America, and sent eminent men to represent the cause in France, Spain, and Holland.

For seven years the conflict in arms was waged. The English had the disadvantage of being three thousand miles from their basis, but they had money and men, and sent over armies not only of Englishmen but of Germans whom they hired. Canada did not revolt, although the Americans sought to win her over, and she afforded some aid to the English. The colonies held many brave men as soldiers, but there was little discipline, and the formation of an army capable of endurance and solid fighting was a slow matter. The **blockade of Boston,** following the battle of Bunker Hill, helped much in the discipline and organization of the troops, and Washington's policy in conducting the war made the most of every opportunity. There was an immense country to defend, and the English had the advantage of a navy by which their troops could be transported rapidly from one point to another. In the first half of the war operations were carried on chiefly in the North. New York, New Jersey, Pennsylvania, and the region of the Hudson River were the battle grounds, and the important towns of New York and Philadelphia were long in the hands of the enemy. The winter of 1777–78, when the army was in winter quarters at Valley Forge in great destitution, was a gloomy one, and the lowest point of humiliation. Early in 1778, however, the French king, who had heard of the important **victory over Burgoyne** at Saratoga in October, 1777, recognized the independence of the United States, and entered into an alliance with the new nation. From that time fortune revived. The French army and navy brought powerful assistance and gave fresh courage. The principal contest was now in the South, where the British had been almost uniformly successful. By a series of brilliant movements, General Greene, at the head of the American army in that department, wrested the country from the enemy, whom he shut up in Charleston. Finally, in the summer of 1781, the campaign was concentrated in Virginia, and after the decisive **siege of Yorktown,** Lord Cornwallis, the British commander, surrendered his army of over seven thousand men on the 19th of October; the war virtually came to an end, though peace was not formally declared until the signing of the **Treaty of Paris,** September 3, 1783, when Great Britain acknowledged the independence of the United States.

Formation of government. The people had conducted a war at great cost to themselves. There had been but few to take the side of Great Britain, but there had been many dissensions and the old industries and sources of wealth had been greatly disturbed. The military operations had not involved vast bodies of men; during the seven years Great Britain sent to America a total of about 112,000 land troops and 22,000 seamen, while the colonies raised, in all, about 280,000 men, but at no one time were there any large armies. The real strain came in the derangement of economic affairs, and especially of those relating to the currency. Money is called the instrument of association, and at the close of the war **the paper money issued by the Continental Congress was almost worthless.** The Congress itself had little influence. It had been elected first chiefly as a deliberative body; it had gradually exercised executive functions, but as the army became the center of attention and Washington the great leader, Congress was looked upon impatiently as a necessary evil. Meanwhile the colonies, no longer holding allegiance to the crown, were conscious of the necessity of stronger self-government, and one by one they organized themselves into States with constitutions, using the practical instruments of government with which they had always managed their internal affairs. Yet as the colonies before, having this local government, had needed an external authority on which to rest, so now the States felt that they were not final, and recognized the need of a head to the scattered members of the body politic. At the same time they were jealous of one another and suspicious of a strong central power. The uncertainty, the inability of Congress to enforce its claims, and the almost bankrupt condition of the country, brought greater difficulties, and the people who had declared their independence and won its recognition came out from the war with few signs of a great power, and foreign nations were slow to form treaties when there was no responsible body upon the American side.

At length a **convention** was called for the purpose of establishing a stronger government. It met at Philadelphia in 1787 and spent four months in debating the proposed **Constitution,** which was at length adopted and submitted to the States for ratification. The debate was transferred from Philadelphia to the State capitals, and the questions involved were agitated month after month. The **Federalist,** a collection of writings by Hamilton, Madison, and

others, remains as a remarkable illustration of the mental ability which was employed in constructing and defending the instrument known as the Constitution of the United States. One by one the States accepted the Constitution, Rhode Island being the last of the thirteen to come in, in 1790. The first president chosen was **George Washington,** John Adams of Massachusetts, who had performed important diplomatic service abroad during the Revolution, being associated with him as vice president. They held office for eight years, from 1789 to 1797, and during this time the government was got into working order, the greatest achievements being the establishment of a sound system of finance at home, under the lead of **Alexander Hamilton,** by which the credit of the nation was restored, and the conclusion of a treaty of commerce and navigation between the United States and Great Britain by which the industry of the country was set free.

Relations with Europe. Washington, refusing to accept a third term, was succeeded by **John Adams,** and he, in 1801, by **Thomas Jefferson,** who held office for eight years. The close of the eighteenth century and beginning of the nineteenth were marked by a great revolution in Europe. In France there was an overthrow of the established order and a period of anarchy followed by the supremacy of Napoleon Bonaparte; the other countries of Europe were strongly affected by these political changes, and in the wars which arose were compelled to take sides with or against the French power. The United States, while gathering internal strength, was still closely connected with France, England, and Spain, and politics here turned largely upon foreign affairs. At first, the revolution in France was hailed as similar in spirit to the American revolution, but when it passed beyond the borders of France and led to war with other countries, public sentiment and interest here were divided. The French and their American sympathizers sought to involve the United States in active alliance with France, and failing in this, the French pursued a hostile policy toward the country until the two nations were brought to the verge of war, which was averted on the accession of Napoleon to power. England was the great antagonist of France, and the conflict between these two powers deranged the commerce of the world. At first the merchants of the United States, taking advantage of the neutral position of their country, were able to draw a great part of the carrying trade to themselves, but as the war grew more deadly each power in aiming blows at the other struck also at the United States. The English declared the ports of Europe blockaded; the French declared the ports of England blockaded, and American ships offering to enter either were liable to capture. In the fierceness of the conflict, American seamen also were constantly pressed into the English service under pretense that they were Englishmen, and American vessels were searched by English officers, who claimed the right, and usually had the power. The United States protested in vain. When England issued orders forbidding neutral nations from trading with France or her allies except upon payment of tribute to her, and France threatened to confiscate all vessels which submitted to English control, Congress in retaliation decreed an **embargo,** by which American vessels and sailors were called home and detained, and foreign vessels were prohibited from taking cargoes from American ports. It was a protest which still further damaged American commerce, and was followed by a nonintercourse act, with similar results. This legislation was followed by proposals from the United States to resume intercourse with either nation which should repeal its hostile acts, and, France acceding to the proposal, a still more stringent condition of things remained in relation to Great Britain, so that at length in 1812 **war** was proclaimed against that power, **James Madison** being then president.

The war, which was very unpopular in New England, lasted into 1815. The land contest was attended by few successes, and Washington, which since the beginning of the century had been the capital of the country, was taken by the British, who burned the capitol, the President's house, and other public buildings. On the sea and the great lakes the American navy achieved some brilliant victories, under **Porter, Perry, Bainbridge, Decatur,** and **Lawrence,** and finally, January 8, 1815, General Jackson fought a great battle at **New Orleans** in which the English were signally defeated. Negotiations for a settlement of the difficulties had already been going on, and a treaty had been signed at Ghent in Belgium before the battle of New Orleans, but news of the treaty did not reach this country in season to prevent the engagement. Immediately after the war, Commodore Decatur with a small fleet put an end to the tribute which the Dey of Algiers and the rulers of Tunis and Tripoli had been imposing on American merchantmen trading in the Mediterranean, and to his depredations upon American commerce.

Growth and Development. There were thirteen States when the Constitution was framed, containing a population of nearly four millions, and a country extending westward, the boundaries of which were not known. Meanwhile the great Northwest was receiving immigrants, and many of the soldiers of the Revolution sought homes in the fertile valleys of the Ohio. In 1803 the country bought of France, for fifteen million dollars, the territory of **Louisiana,** a vast, indefinite region west of the Mississippi River, reaching from the Gulf of Mexico to the British Possessions on the north. An expedition headed by Captains Lewis and Clarke explored the territory, bringing back reports which stimulated public interest but still left the magnitude of the acquisition a mystery. The national area was more than doubled. The occupation of the Western and Southern country by Eastern families and by a tide of **immigration** from Europe brought the people into continual collision with Indian tribes, who were either pushed further westward or inclosed by the white population. In 1811 a series of engagements occurred on the Northwestern frontier, and during the War of 1812–15 the English engaged Indians as allies, as the French had done before. In the Southeast, also, the Seminoles in Florida, which was still a part of the Spanish possessions, harassed the border settlements, and the passage into Florida of General Andrew Jackson for the purpose of punishing them led to complications with Spain which ended in the purchase by the United States of the peninsula of Florida for the sum of five million dollars.

The first quarter of the nineteenth century witnessed a rapid advance in material growth, which is partially disclosed by the widening of the national domain. Independence of Europe, which was confirmed by the last war with England, was attended by the development of national industries in accordance with the character and resources of the several sections. In the South, in addition to the great staple of tobacco, which constituted its chief export before the Revolution, the growth of cotton, of sugar, and of rice, added rapidly to the wealth and importance of the section. The invention of the **cotton gin** by Eli Whitney in 1793 had given a great impetus to the production of cotton, and as the land was already held in large estates, where many laborers, under bondage, were employed in the simple processes called for by the few articles of production, there was but little emigration thither from the North or from Europe, the country was thinly settled, and cities and towns were infrequent. The system under which the South was cultivated gave little encouragement to the growth of other industries.

In the Northeast, on the other hand, the maritime life of the people and the lack of fertility in the soil stimulated the growth of cities and towns and the formation of manufacturing centers. By 1821 the erection of cotton mills had ceased to be an experiment, and in that year the water power at **Lowell** on the Merrimac was bought by Boston capitalists, one only of the steps in the organization of labor which have wrought a revolution in society. By this time, also, the introduction of steam was beginning to show men what a mighty power was in their hands. The **first steamboat** was launched on the Hudson in 1807, and soon the boats became familiar on river and lake; in 1819 the first transatlantic passage by steam was made; the use of steam for land travel came later; the first road for passenger traffic was the Baltimore and Ohio Railroad, begun in 1828.

Before railroads had been invented, with their power in later years to develop the West with immense celerity, the country which was still, to the people on the Atlantic seaboard, "the West," was opened by the **Erie Canal.** This was completed in 1825 and gave a great acceleration to the commercial importance of New York City. Other canals had been projected and constructed in the enterprise which possessed the country in every direction. Wealth was flowing in. At the end of the Revolutionary War the debt of the United States was estimated at forty-two million dollars, and that of the separate States at twenty million. The two sums had risen to fifty-four million and twenty-six million, when Hamilton, first secretary of the treasury, carried his great scheme of the assumption by the federal government of the State debts. So rapidly was this debt extinguished, that in 1836 there was a surplus in the treasury, and provision was made for its distribution among the States.

Political life. The history of a nation is in its organic growth, but it is with nations as with men, — as they think in their hearts, so are they, and the development of the United States cannot be understood without a distinct reference to the political creeds which have been held. In the convention which framed the Constitution two divergent views had place; part of the delegates wished to see the old Articles of Confederation reaffirmed but strengthened, the States being recognized as equal to each other and superior to the Confederation; the opposing party embodied their views in the first resolution which was adopted: "Resolved that it is the opinion of this committee that a national government ought to be established, consisting of a supreme Legislative, Judiciary, and Executive," and by supreme, it was clear that most of this party intended a central government with full power to coerce individual States. The final result of the Constitution was obtained only by a compromise between two sets of views. Washington was chosen unanimously by the electors both for the first and the second term. His personal influence was exerted to secure harmony among the leaders in public life, but before the end of his first term two parties had emerged from the political strife, with names and tolerably well defined policies. The name **Federalist** was held by most who were in administrative positions, and was applied to a creed which concentrated political power in the general government, and construed the Constitution with freedom whenever an opportunity occurred for emphasizing the sovereignty of the nation. The name **Democratic Republican** was taken by a party, of which Jefferson was the acknowledged head, that opposed any tendency to strengthen the central government at the expense of the States, and construed the Constitution strictly as expressing a league between sovereign States. From the beginning there were these two forces at work in politics, a centripetal, subordinating all other authority to that reposed in the threefold supreme government, and a centrifugal, retaining authority among the separate States. The discussions in Congress and in the country at large which attended the gradual development of public policy were constantly illustrating these fundamental differences.

Thus in the great question of the public debt, which confronted the nation at once, the Federalist doctrine was exemplified in Hamilton's scheme of an **assumption of the State debts by the General Government,** while the Democratic Republican opposition recognized in the measure a practical subordination of the States, and a corresponding increase of power in the Federal Union, which would be charged with all the collection of revenue. Again, when European politics and events agitated America, Democratic clubs sprang up all over the country as visible witnesses to the sympathy felt by the party with the French revolutionists, and the appointment of Chief Justice Jay as envoy extraordinary to England, for the purpose of effecting a treaty with that country, was carried through only after the Federalists had strained every nerve to sustain the President. A decision by the Supreme Court had shown that an action brought by a citizen of the United States might lie against a State as against any other corporation. The Democratic Republicans secured the passage of the Eleventh Amendment to the Constitution, by which a State was liable only to its own citizens. The question of **internal improvements** again and again came up, the power of the general government to engage in them being denied by Jefferson and his adherents, and advocated by those who were ready to make this practical acknowledgment of the supremacy of the nation. The eagerness of the weaker States to avail themselves of the aid of the nation served finally to withdraw the question from theoretical politics, though an appropriation looking to this end is still liable to bring up the old dispute. The advocates of **State Rights,** again, generally opposed the policy by which a protective tariff aimed at anything beyond a provision for the necessary expenses of the government. Hamilton secured, in 1791, the establishment of a national bank to act as financial agent of the government. In 1811, when the Democratic Republican party was in power, it defeated a proposition to recharter it. At the close of the second war with England, when the Federalist party had almost disappeared from politics, and there was but one party, signs of two wings in that began to appear, and to divide about the old questions of the bank and a tariff. The names **National Republican,** as applied to those who inherited the Federalist ideas, and **Democrat,** the term accepted by the State-rights party, were in use for about twenty years, when the former came generally to be known as **Whigs.** In all these vicissitudes of name and party the two poles of political thought were in the concentration of power in the general government and the retention of it in the States.

The Problem of Slavery. Closely interwoven with the political web was the strand of **slavery.** In the earlier days there had been slaves in the North as well as in the South, but the Northern life with its complex interests and its growing towns was unfavorable to slavery. In the South it was different. The great estates held by families and devoted to the cultivation of one or two staples offered opportunities for the employment of slave labor, and in the formation of governments, power resided in an upper class. Those who distrusted the policy of slavery, and the few who were offended by it in their consciences, looked to see it disappear under the pressure of economic laws;

but the invention of the cotton gin, by which the growing of cotton became very profitable, and the purchase of the vast Louisiana domain, gave an impetus to the South and led the people to extend a system already in vogue. Property became measured by slaves, and the whole order of life was affected by an organization of society radically different from that at the North.

In the desire to set bounds to slavery, an act of Congress was passed forbidding the **Importation of Slaves** after 1807, and in the organization of the great Northwestern Territory slavery was prohibited by the **Ordinance of 1787.** Again, in 1820, upon the proposition to admit Missouri as a State, a bitter conflict ensued, resulting in a compromise, by which slavery was permitted there, but excluded from all the other Territories north of latitude 36° 30′. This **Missouri Compromise** marks the degree in which the question of slavery had entered into national politics, and the impetus which the institution had gained; the sequel showed how vain was the attempt to exclude the system from the nation by making boundaries for it. The great South and Southwest afforded abundant field for the growth of slavery, and although the slave trade with Africa was abolished, illicit trade was kept up, while within the country a great traffic in slaves still further bound the people by self-interest to the continuance of the system. In the division of parties on other questions, slavery was constantly affecting decisions. The South had no manufactures to foster and it had a great staple to sell, of which it had almost the monopoly; hence it opposed a protective tariff. Above all, since the States of the South recognized slavery in every fiber of their legislation and society, the sovereignty of the State — its independence of Federal control — was a cardinal doctrine in politics, and the State-rights party was thoroughly under Southern influence. So far was this doctrine carried that in 1832 South Carolina, objecting in common with most of the South to the tariff which Congress had laid, openly declared that the law would be disregarded in that State, and this **Nullification** the people of the State were prepared to carry into secession, for which armed preparations were making. There was at the head of the United States government at this time, in **Andrew Jackson,** a President who had a passionate attachment to the Union and an imperious will. His promptness and courage, supported by law and the military force of the government, checked the incipient movement, but the doctrine of the right of a State to secede was only more firmly ingrained in Southern political belief.

The nullification act in South Carolina was contemporaneous with the beginning of an organized movement at the North which aimed at the destruction of slavery as the root of all political evils, because a fundamental wrong in morals. In 1831 there was established in Boston, by William Lloyd Garrison, a newspaper called ***The Liberator,*** which preached a crusade against slavery. It became the rallying point of a small body of men and women, who also formed themselves into **the Antislavery Society,** and in the midst of much obloquy appealed steadily to the consciences of men against the system. Year by year the question of slavery became the absorbing and penetrating question of American politics, society, religion, literature, and business. Slavery itself was intrenched in the solid support of a great geographical section; it was involved in the industry of the country; it claimed the protection of those who were jealous of Federal authority and held that each State had exclusive power over its own institutions. But it could not be restrained within State limits; it insinuated itself into all national subjects, and it divided the nation not geographically but by an invisible line running through party, home, and church. Men marshaled themselves on one side or the other, and those who sought neutrality received the customary fate of neutrals. The historical progress of the conflict may be noted by a few great landmarks.

In 1839 the House of Representatives, under threat of disunion, adopted a rule, which was observed for ten years, that it would receive **no petitions on the subject of slavery.** The measure was an indication of the effort men made to ignore an issue before which they felt themselves powerless.

In 1845 **Texas,** which had won its independence from Mexico at the decisive battle of San Jacinto on April 21, 1836, was brought into the Union. A conflict had been going on within its borders upon the subject of slavery; it was feared that the nonslaveholders would secure control, and the South was urged to demand and obtain annexation, not only by the fear of a power hostile to slavery on her border, but by the desire to secure new territory for the expansion of the system. The compactness of the organization which stood behind slavery grew denser and more forcible as the struggle became more imminent. It carried the measure through Congress against determined opposition. War with Mexico followed almost immediately, and was carried on for three years. There were some brilliant military actions by the small army operating, and the conclusion of the war brought **a further extension of territory** which included New Mexico and California. In the political strife which accompanied the war, Congress again made an effort to set bounds to slavery by what is known as the **Wilmot Proviso** of 1846, which stipulated that in case of the acquisition of any new territory by treaty with Mexico, "neither slavery nor involuntary servitude shall ever exist in any part of said territory, except for crime, whereof the party shall first be duly convicted." The Proviso passed the House but not the Senate.

The opposition to slavery by the abolitionists, as Garrison and his party were called, was mainly outside of political lines, but the growing sentiment in the North now began to take political organization, and the agitation of the Wilmot Proviso was followed by the formation, in 1848, of the **Free-soil party,** which nominated Martin Van Buren for president and Charles Francis Adams for vice president. The number of votes cast for these candidates was 291,263, in a total vote of 2,871,908. The dissatisfaction with the prevailing conduct of the government was not confined, however, to this positive, antislavery element, and the Whig candidate, General Taylor, was chosen. Compromise and delay were still resorted to in the hope of securing peace, and in 1850 was enacted what was known as the **Fugitive Slave Law,** under which the rights of slave owners were so construed as to require citizens in any part of the Free States to aid in restoring to service any slaves who might have escaped. The enforcement of this law in Boston especially excited deep indignation, and the publication shortly after of Mrs. Stowe's tale of ***Uncle Tom's Cabin*** increased popular feeling.

In 1854 **Kansas** and **Nebraska** were organized as Territories, but the people were left to decide for themselves whether they would or would not permit slaveholding within their limits. This act, which involved the repeal of the Missouri Compromise, was received as a fresh illustration of the increase of the slave power, but the antislavery element in the North now had a fairer field for its expression. It organized emigration to the new Territories, and though a period of violence ensued, which embittered both sections, both Kansas and Nebraska finally came into the Union as free States.

In 1856 the political party which opposed slavery took the name of **Republican** and nominated **John C. Frémont** for the presidency. Great enthusiasm was manifested, and the rapid growth of the party was disclosed at the polls when Frémont had 1,341,264 votes against the prevailing Democratic candidate, James Buchanan, who had 1,838,169. The closeness of the political struggle was further illustrated by the contest before the election over the speakership of the House of Representatives, which was waged with great bitterness for more than two months and resulted in an antislavery victory.

In 1859 the Supreme Court of the United States decided that the Missouri Compromise of 1820 was unconstitutional, and that slaveholders might take their slaves into any State in the Union and retain them in bondage. The decision was known as the **Dred Scott decision;** in the inflamed state of public sentiment at the North, the practical unimportance of the decision was disregarded in view of the legal support given to an abhorred system, and the implied national character of slavery. The decision was condensed popularly into the phrase "Negroes have no rights that white men are bound to respect."

The growing hatred of slavery found expression, in 1859, in the raid made upon Harpers Ferry, Virginia, for the purpose of freeing slaves, by **John Brown,** who had borne a conspicuous part in the Kansas struggle. Brown typified in himself the more violent antislavery sentiment, which was largely based on conscience, and though his act found few public supporters in the North, and he was tried and hanged, the dramatic significance of the act was great. The personal character of the man was remembered and the unlawfulness of his act forgotten. In the South the growing apprehension of a political overthrow was greatly enhanced, and the act of Brown was interpreted as disclosing the latent hostility of the North.

The political canvass which followed in 1860 was accompanied by the profoundest feeling and by ominous threats of disunion, which were heard in all parts of the South, should the Republican party, which was wholly within the geographical lines of the North, be successful. Four parties were in the field. The Democratic party had been divided by the slavery question, and the two wings offered each a candidate. An organization calling itself the Constitutional-Union party, consisting of the remains of the Whig party, which still believed that the great conflict could be averted, polled a small number of votes, but the largest number was obtained by the candidates of the Republican party, **Abraham Lincoln** of Illinois and Hannibal Hamlin of Maine.

The war for the union. The political strife had been concentrated upon the question of slavery. The final attitude taken by the Republican party was that there was no law permitting slavery in the Territories, and no power to enact one, and that Congress was bound to conform to this decision. It was plain that there could be no rest in this position. The party, once placed in power, would pass from confining slavery to successive steps for destroying it. This the South felt, and having been defeated at the ballot box it promptly prepared to anticipate further aggression by a resistance extra-political. Lincoln was elected in November, 1860; he would take his seat in March, 1861. Between those months organization in the South against the incoming government went forward with great activity. The expression was through its State bodies and its representatives in Congress. South Carolina passed an **ordinance of secession** in December, and was followed in January, 1861, by Mississippi, Alabama, Florida, Georgia, and Louisiana, and in February by Texas. Their representatives withdrew from Congress, and three days after the secession of Texas a convention of the several states met at Montgomery, Alabama, and organized a government under the name of the **Confederate States of America,** signifying by the title that the bond of union was a league, and carrying into formal expression the theory of the Union which had been implied in the doctrine of State sovereignty. A constitution was adopted, **Jefferson Davis** of Mississippi chosen president, Alexander H. Stephens of Georgia, vice president, and immediate measures taken to maintain the organization by a seizure of all munitions of war within the Southern territory.

The administration at Washington, holding that the Federal government had no power to coerce a State, a view also implied in the doctrine of State sovereignty, offered slight check to the movement, and in the confusion which prevailed many fruitless efforts were made by leading men in both sections to avert the impending conflict.

The commander of **Fort Sumter** in the harbor of Charleston, **Major Anderson,** refused to deliver his trust to the State authorities, and on April 12, 1861, General Beauregard, commanding the Southern troops, opened fire upon the fort. After suffering a two days' bombardment the fort was surrendered, but the North, which had refused to believe the threats of the South, was at once aroused, and the President's call for seventy-five thousand volunteers in defense of the Union was answered by a sudden military fury which sent troops by every highway to Washington. The outbreak precipitated political action in those parts of the South which had not as yet seceded, and Virginia, Arkansas, North Carolina, and Tennessee in quick succession cast in their lot with the Confederacy. Delaware, Maryland, Kentucky, and Missouri contained strong opponents of secession, and from their position they were less free to act with the South. The sympathizers with the Confederacy in these States were active throughout the war, and there was much fighting in Kentucky and Missouri, but they never severed their connection with the Union.

It was plain that the country lying on the border between the two sections would be at once the theater of war, and the division of sentiment in these border States intensified the internal conflict there. Both Northern and Southern armies hastened to secure the advantage of position. Especially was the district between Washington and Richmond the center toward which the eyes of all were directed. Richmond was the capital of the Confederacy, and became at once the sign of the Confederate power. To possess that was to strike at the heart of the enemy. A battle was hurried on by the impatience of the North; it was fought near a little stream called **Bull Run,** July 21, 1861, and resulted in a defeat of the Union forces and a panic-stricken retreat to Washington. In the South it is called the **First Battle of Manassas.** The event for a moment stunned the North and then created a terrible sense of the gravity of the war that had been begun. An army of half a million men was called for by the President. Jefferson Davis also called for troops, and both sides settled down to the conflict, though many on each side hoped for a speedy settlement.

The fall of 1861 was spent by both armies in perfecting their organization and disciplining the troops; no important general action took place in the East, while in the West a struggle went on over Missouri, which the Confederacy aimed to secure; the Southern forces were generally successful in the field, but the State was restrained from joining the Confederacy. On the Atlantic seaboard the navy of the United States, which had remained loyal, was actively reënforced and employed in occupying important points and in maintaining a blockade of Southern ports, but the long extent of coast rendered it difficult to make this perfect, and throughout the war there was a large traffic carried on by the South, especially with the islands of the Atlantic and the West Indies; privateers also were fitted out by the South which affected the commerce of the Union. The great European naval powers, England and France, issued proclamations of neutrality, acknowledging the Confederacy as a belligerent power. The South sought more than this, and sent

commissioners to secure recognition as an independent nation. Two of these commissioners, Messrs. **Mason** and **Slidell,** were taken from the *Trent,* an English mail steamer, by Captain Wilkes, in command of the American frigate *San Jacinto,* an act which was not justified by the position which the United States had previously taken, so that upon a requisition from the English government the commissioners were at once delivered up. The act aroused the hostility of a large party in England which throughout the war openly or secretly favored the Confederacy.

The earliest movement in 1862 was at the West, where in the first three months the Union army and navy operating along the Cumberland and Tennessee rivers, which divided the two forces, obtained possession of this line and compelled the withdrawal of the Southern army from strong positions and from the occupation of Kentucky and a large part of Tennessee. In this campaign the principal actions were at Forts Henry and Donelson. Nashville was occupied by one division of the Union army under General Buell, and Pittsburg Landing on the Tennessee by another under General **Ulysses S. Grant.** It was intended to effect a junction of the two armies at the latter point, but before this could be done General Albert Sydney Johnston, commanding the Southern forces, fell upon Grant's army April 6th, and inflicted a severe blow which would have been more disastrous except for the timely arrival of Buell's army, and the loss on the Confederate side of their general This was the battle of **Shiloh,** called in the South the battle of **Pittsburg Landing,** and was followed by two months of cautious delay on both sides.

Meanwhile, at the East, where General **George B. McClellan** was in command of the Union forces, and General Joseph E. Johnston in command of the Southern army, the spring was spent in preparation. General McClellan, having Richmond for his objective point, transferred his army to the peninsula between the York and James rivers and advanced from that side, availing himself of the aid of water communication. On April 4th the army of the Potomac began to move from Fortress Monroe, and for three months the campaign went on, closing with a series of engagements, with large losses on both sides, in which the more brilliant successes were won by the Confederates, General Jackson, known familiarly as **Stonewall Jackson,** especially distinguishing himself. The battle of **Malvern Hill** held the Confederates in check while McClellan withdrew to the protection of the gunboats.

In August more offensive tactics were adopted by the Confederate forces, and General **Robert E. Lee,** now in command, began to move on Washington. A terrible battle, known as the **Second Battle of Bull Run,** or **of Manassas,** was fought August 29th and 30th, near the old Bull Run battle ground, in which the Union army under General Pope was severely beaten. McClellan was hastily summoned back to Washington, where his forces and the remnants of Pope's army were united, and every nerve strained to reverse the situation. Lee crossed the Potomac and was moving upon Washington, when at the battle of **Antietam,** called, in the South, the battle of **Sharpsburg,** September 17th, after a sharp action, he was repulsed and turned back. No decided action followed until December 13th, when General Ambrose E. Burnside, who had been appointed in McClellan's place, engaged Lee's army at Fredericksburg on the Rappahannock and met with great loss. The Eastern campaign had been disastrous, but the advantage gained at the West had been, with some fluctuations, retained by the Union army, and in the extreme South the city of New Orleans had been captured by the combined military and naval forces under General Butler and Commander **Farragut.** The Mississippi was now held at its mouth, and in the North was open nearly to Vicksburg. On the Atlantic there had been important naval expeditions, and one significant sea fight, when the Confederate ironclad ***Merrimac*** fell upon the United States sloop of war *Cumberland* and frigate *Congress,* and destroyed them; at this juncture the ***Monitor,*** an ironclad of peculiar and novel construction, suddenly appeared and in turn defeated and drove away the *Merrimac.* The encounter had great effect upon the development of ironclad warships.

On September 22, 1862, President Lincoln had issued a preliminary **proclamation,** which was followed on the first day of 1863 with a formal one **declaring free all slaves** within the borders of the Confederate States. Hitherto the question of slavery had been kept out of sight as far as possible, and the war had been conducted without ostensible reference to it, but this act committed the Union to the final abolition of slavery, and what was announced at the time as a war measure was sanctioned afterward by amendments to the Constitution. On the last day of the year 1862 and the first of 1863, a great battle was fought at **Murfreesborough,** near Nashville, Tennessee, in which both sides suffered severely and neither gained a substantial victory, though the Union army remained in possession of the field. The great object in the West was now the opening of the Mississippi River, and Vicksburg on the north was besieged by General Grant, while Port Hudson on the south was besieged by General Banks. Both places finally capitulated, and the Mississippi ran "unvexed to the sea."

While the operations which resulted in the fall of Vicksburg were going on, the campaign in the East had seen a great reverse to the Union forces at **Chancellorsville,** May 2d and 3d, 1863, under General Hooker, who had succeeded Burnside, and shortly after a powerful invasion of Pennsylvania by Lee, whose victorious army made a spirited attempt to follow up these successes. It was a time of intense excitement when the Union armies under General Meade, who had superseded Hooker, marched to meet Lee, and the two armies fought at **Gettysburg,** Pennsylvania, during the first three days of July, what is generally regarded as the decisive battle of the war. Lee was repulsed and fell back across the Potomac. The next day **Vicksburg fell,** and the two events gave immense encouragement to the North. No further engagement of importance occurred during the rest of the year in the East; in the West a great battle was fought at **Chickamauga,** September 19th and 20th, in which the Union army was defeated; but General **Ulysses S. Grant,** now at the head of the Western army, organized a powerful movement which led to the battles of **Lookout Mountain** and **Missionary Ridge** and resulted in the driving of the Confederate forces out of East Tennessee.

Grant's success at the West pointed him out as a great military leader and he was made Lieutenant General. Leaving the Western army in the command of Major General **William T. Sherman,** Grant opened the campaign in the East by attacking Lee's army on the Rapidan, May 4th, where the terrible **Battle of the Wilderness** was fought, which reduced the available force of the Confederate army, now beginning to suffer from the great drain which had been made on the Southern population. During six weeks Grant fought a series of battles which resulted in great losses, especially on the Union side, and convinced him that the essential points of Petersburg and Richmond could not be forced, but must be carried by siege. Battles were fought and raids made on either side during the rest of the year 1864; but though success fell first to one then to the other army, the eyes of the people were directed especially to the West, where Sherman was moving his forces toward the central point of Atlanta, Georgia. He gained step by step, chiefly by maneuver. The Southern army, being driven from **Atlanta,** made a countermarch upon Nashville; the march was a brilliant one, but Hood's army was defeated December 15th, by General Thomas. Sherman, who had left his rear to be defended thus, was now moving rapidly through the Southern country, producing great havoc and meeting with no strong opposition. His operations were practically hidden from Northern view, and by a dramatic coincidence he came into sight again and reached the sea near Savannah almost simultaneously with the defeat of Hood before Nashville. He significantly pronounced the Confederacy to be now only a shell.

When Sherman again moved his army, February 1st, he began his march northward, on his way to join Grant, whose army during the winter had been strengthened, and who now resumed his attack upon Lee. After a series of movements, in which General Sheridan's cavalry bore an important part, an attack was made along the whole line of works in front of Petersburg, April 2d. The defense by Lee was plainly impracticable, and that general, drawing off his army, abandoned both Petersburg and Richmond, which were entered at once by the Union army. Grant pressed upon Lee, who was seeking to join Johnston's forces, and surrounded his army at **Appomattox Court House.** Here Lee, perceiving further resistance to be hopeless, surrendered, April 9th. Shortly after, Sherman faced Johnston at Raleigh, North Carolina, and received the surrender of his army, April 26th.

Reconstruction and Pacification. In the midst of the relief over the end of fighting, a sudden disaster arrested the nation. **President Lincoln,** who had rapidly grown in the admiration of his countrymen, and had recently been inaugurated for a second term, was **assassinated** in Ford's Theater, Washington, on the evening of April 14, 1865. At the same time an attempt was made on the life of Mr. Seward, the Secretary of State, and a plot was discovered for the murder of other prominent officers of the government. The conspiracy was confined to a few persons who had been embittered by the failure of the South, but the immediate result was to deepen in the minds of many a sense of the peril which still lay in the system of slavery.

The war was over; the attempt at secession had been defeated at great cost of men and material on both sides. Not less than a million of men had perished or been wounded; the national debt had reached the sum of $2,773,236,173 and was bearing high interest, while State and town debts had increased all over the country. The Union had been preserved, but the fact was generally recognized that the war had been a revolution, and that while the forms of government might remain the same, a wide gulf separated the old Union from the new nation. The administration continued under the former vice president, **Andrew Johnson;** but it was soon evident that the interpretation of the Constitution, and the practical relation of the States to the Union, and of the different powers of government to each other, were to constitute the great political questions of the generation. The old division of State rights and centrality reappeared and took the form of a conflict between Congress, which maintained the extreme supremacy of the nation, and the President, whose political creed confessed the largest power in the State. The question of reconstruction became complicated with the prerogative of Congress and of the Executive; the President endeavored to hasten the return of the States to their full place in the nation, while Congress interposed checks and obstacles intended to secure the fruits of the successful war, before the seceding States should be in a position to share in the general government. The breach between the executive and the legislative widened, until at last Congress attempted to remove the President from office by impeachment. He was accused of having violated the **Tenure of Office Act,** and the articles of impeachment were mainly devoted to the elaboration of this charge. According to constitutional provision the House acted as prosecutor and the Senate sat as a jury. Conviction required only a two-thirds vote. The trial lasted eighty-two days. It resulted in acquittal. Yet the decision was so close that the change of a single vote from acquittal to conviction would have reversed the result. On the expiration of his term, President Johnson was succeeded by General Grant who, four years afterward, was reëlected. The congressional plan of reconstruction had prevailed. In 1870 the seceded States had all been restored to their full rights, although certain persons were still excluded from participation in political affairs by conditions imposed by Congress.

The result of the presidential election of 1876 was undecided for nearly four months. Mr. Tilden, the Democratic candidate, was acknowledged to have received 184 electoral votes, one less than the number requisite for election. Mr. Hayes, the Republican candidate, had 166. The entire electoral vote of Louisiana, Florida, and South Carolina and one vote in Oregon was disputed, 19 votes in all. No method of determining the technical questions involved was provided by the Constitution. The decision was finally referred by the Congress to an **extraordinary electoral commission.** This commission declared by a majority of one that General Hayes was elected by a majority of one in the electoral college. Mr. Tilden and the Democratic party submitted without resistance.

Shortly after his inauguration President Hayes withdrew all the Federal troops still stationed in the South. No outward indication now remained that the work of pacification was not complete. The year 1879 was signalized by the resumption of specie payment, which had been suspended since the first year of the civil war. These two events, the withdrawal of the troops and the unlimited redemption of the greenbacks, are the most important of that administration.

The **material condition** of the country witnessed great changes from the period opening with the War for the Union. The **discovery of gold in California** in 1848 had led to a rapid and wonderful development of the Pacific coast, and emigration moved westward in steady streams. While the war was going on, Congress made large grants in aid of a railroad to the Pacific which was finally completed in 1869; the region of country west of the Mississippi filled up fast with settlers drawn both from the older parts of the country and from Europe, and was organized into States and Territories as rapidly as the growth of population would admit, while the discovery of silver in large quantities hastened settlement. Meanwhile, besides the legitimate expansion through industry, there was a feverish and unhealthy activity arising from the fluctuations in the apparent value of property. There were debts public and private to be paid, and a disposition to pay them by more promises to pay. It was only by the severest struggle in Congress, and in popular discussions and through the newspaper press, that a policy was finally accepted by the nation which checked the issue of paper money, provided for the extinction of the public debt, and, as a consequence, in connection with the gradual return of the people to all forms of industry, led to the restoration of a uniform standard of money value and of the public credit, as indicated by a great reduction in the rates at which money could be borrowed by the government. In this progress a great commercial panic occurred in 1873, and had much to do with a soberer mind in the people and a more general spirit of economy.

A significant sign of returning prosperity is found in the celebration of the centennial year of American independence, by the **International Exhibition** at Philadelphia. It gave an impetus to manufactures, especially to those connected with the fine arts and by it the people were given a revelation of the resources of the country. But some things, indeed, could not be exhibited, except indirectly. One might admire the inventive genius which was displayed in a great variety of ways and he might gain some idea of the attention paid to all the apparatus of education and to the manufacture and publication of books, but to estimate fully the forces of the country, which were to shape the future, was beyond any man's power. He would have needed to take into account the multitudes of European immigrants ready to occupy the unplanted lands of the West; to understand the comprehensive and elastic school system, differing in different parts of the country but always keeping in view a common aim; to behold in the gradual elevation and enlightenment of emancipated slaves and their descendants one of the miracles of history; to foresee the industrial transformation of the South wherein diversity of occupation is superposed on the old agricultural life; to realize in the overmastering national spirit the ceaseless progress toward purer politics and ampler self-government and more perfect personal liberty.

The Years Since. The opposing candidates in 1880 were men both of whom had served with distinction as officers of the Union army during the Civil War. General James Abram Garfield was elected over his Democratic opponent, General Winfield Scott Hancock. Less than five months after his inauguration President Garfield was shot by a disappointed office seeker. Death did not follow immediately, but the President lay helpless from July 2, 1881, the day of the crime, until September 19. Political differences were softened if not lessened in the common sympathy, and, when Vice President Arthur succeeded to authority as president, there was a unity of feeling never perhaps exceeded in the history of the country. The new administration was characterized by great dignity. There seemed always attaching to it something of the solemnity of the circumstances in which it had begun. The **Civil Service Reform Bill,** introduced in the Senate by George Hunt Pendleton of Ohio and in the House by Samuel Sullivan Cox of New York, became a law. This measure was initiative rather than comprehensive, but it indicated progress in the separation of minor offices from politics.

The presidential campaign of 1884 was bitter and virulent. Seldom have the characters of opposing candidates for the presidency been attacked so violently. The subsidence of the war spirit was evidenced in that both great parties named for the highest office men who not only had borne no military part in the conflict but had obtained exemption by securing substitutes. For several days after the election it was not certain who had been chosen. All feared the possibilities of another disputed election. One candidate had received without question 183 electoral votes and the other 182, while the 36 electoral votes of New York were in doubt. By a plurality of a little over one thousand in its total popular vote of almost one million two hundred thousand New York decided the result in favor of Mr. Cleveland over the Republican, Mr. Blaine. So, in March, 1885, Washington beheld the spectacle, not seen since 1857, of the inauguration of a Democratic president. Near the close of this administration the issue between a **low tariff,** with revenue as its controlling object, and a **high tariff,** with revenue incidental to protection to home industries, became for a time the chief one between the leading parties. The popular verdict was reversed rapidly and often during the ensuing years. Thus the Republicans regained power under Mr Harrison in 1888 to lose it when Mr. Cleveland was reëlected in 1892 and again to triumph under Mr. McKinley in 1896. In the campaigns of 1900 and 1904 the tariff was a very minor issue. In 1908 both parties seemed to stand on common ground in demanding a revision of the tariff. One feature of Mr. Cleveland's first administration, which has left an abiding influence, was the attention paid to naval affairs. Several vessels were then completed which formed the nucleus of the American navy of to-day. Mr. Blaine, Secretary of State in the Cabinet of President Harrison, conducted diplomatic affairs with vigor and maintained the rights of Americans abroad.

At the beginning of Mr. Cleveland's second term the Democratic party occupied such a political ascendancy as it has held at no other time during the past fifty years. The President was a Democrat, the Senate and House of Representatives were both Democratic by substantial majorities. Yet within two years that ascendancy in both Senate and House was lost and it has never been regained. The **Columbian Exposition** at Chicago in celebration of the four hundredth anniversary of the discovery of America, the **repeal** of the **silver-purchasing clause** of the Sherman Act and the emphatic affirmation of the Monroe Doctrine in the Venezuelan boundary dispute constitute the more memorable events of Mr. Cleveland's last term of office.

The presidential campaign of 1896 was notable for its intensity and for the appeal on all sides to moral forces. The questions at issue were thoroughly presented and were supposed directly to affect the personal interest of the individual voter. An unlimited free coinage of silver as legal tender money at the rate of 16 to 1 was advocated as assuring prosperity and plenty. Despite the earnestness of the struggle, the great majority of voters heartily accepted the popular decision as establishing the single monetary, or gold, standard.

The Spanish American war is the spectacular event during the administration of President McKinley. The condition of affairs in Cuba had grown steadily more deplorable. The Spanish government was not able to put down the revolutionists nor were the revolutionists abie to win such successes as would assure independence. Each party was able to harass and torment but neither was able to subdue the other. Left to themselves increasing disorder and misery and horror seemed the probable outcome. Business interests demanded interference. The well-nigh unanimous press and pulpit were even more insistent in the name of humanity. The **destruction of the *Maine*** in the harbor of Havana increased the tension. Had almost any other man been at the helm of state, the crash of conflict would have come earlier. But President McKinley constantly deferred forcible action, in order that no possible opportunity should be lost to secure the desired end by peaceful measures, and avoid interference. Denounced and vilified the country over for indifference, he would not move so long as a single hope for peace remained. At last even he could hold back no longer. In his inaugural message after his reëlection he well said, "I did all that in honor could be done to avert the war, but without avail."

The Spanish American war was a revelation, not so much of the might of the United States as of the weakness of Spain. But its results were beneficent for all the parties concerned. It brought independence to Cuba. It secured for Porto Rico and the Philippines the only just and equable government they have ever known. It delivered Spain from insular burdens which were beyond her strength, which drained her resources and to which she clung solely because of Castilian pride. It widened the horizon of the people of the United States. It put upon the nation the neither sought nor shunned responsibilities of colonial government. It brought us, in the words of Theodore Roosevelt, into that "larger world-life in which, whether we will or not, we must take an ever-increasing share." It dealt the last blow to lingering sectionalism and awoke such consciousness of common nationality as the children of the Union had never felt. And for such a period William McKinley was equal to his opportunity and his responsibility. No other chief magistrate since Abraham Lincoln had so understood and sympathized with the peculiar wants and feelings of each section of this country. No other, in the presence of conflicting interests, was so potent in persuasion. No other president had exerted such molding influence in congressional legislation. And this was largely due to his remarkable capacity to comprehend another man's position and to put himself in another man's place.

On September 6, 1901, President McKinley was shot by an anarchist while holding a reception in the Temple of Music of the **Pan-American Exposition** at Buffalo. The injury was not immediately fatal, and he lingered until September 14, when he died.

Mr. Roosevelt, the Vice President, at once took the oath as President. Re-elected in 1904, he retired from office on March 4, 1909. The seven and a half years during which he served as the Executive are crowded full. Specially to be remarked are: the effort to regulate the railroads and the trusts; the effort for legislation granting to employees an absolute right to damages for injuries received in the performance of their duties; the prosecution and conviction of criminals in the land-fraud cases; and the encouragement given to forest preservation, to irrigation of arid lands, to conservation of the national resources, to improvement and utilization of the waterways, and to the development of an adequate navy. Memorable in legislation, because of far-reaching and beneficent consequences, is the enactment of the **Pure Food Law.** The **Louisiana Purchase Exposition** at St. Louis in 1904 and the **Lewis and Clark Exposition** at Portland, Oregon, in 1905 fitly celebrated the centennial anniversary of two national events. In 1907 the **Jamestown Exposition** commemorated the tercentennial of the first permanent English settlement in the territory of the United States. The construction of the **Panama Canal** was vigorously undertaken, and the battleship squadron went round the world. The treaty of Portsmouth (August, 1905), terminating the Russo-Japanese conflict, was the first exclusively foreign treaty negotiated upon American soil and for his active part in bringing about the negotiations President Roosevelt was awarded the Nobel Peace prize of 1906.

In the more than a generation since the reconstruction and pacification which followed civil strife, it would seem as if all possible experience had visited this land. An immensity of experience has been packed into a minimum of time. Financial panic and disaster have alternated with almost fabulous prosperity. Doctrines, now heresies because defeated, have roused men to the struggle after economic or political utopias. Agglomerations of capital have confronted and still confront agglomerations of labor in the eternal problem, handed down from the Middle Ages and from Rome. A higher socialism than the Socialism of a party label invades, permeates and transforms all parties in advancing national brotherhood.

It would be puerile to ignore defects and imperfections still existent in the national and municipal life, or to deny that perplexities and dangers await the city and the Republic. Comparison with the past reveals the progress already made and suggests the rich promise of the future. American history is the demonstration of the sovereignty and the soundness of the people. Lincoln was no less philosopher than statesman in that he cherished entire and unfaltering confidence in the plain people.

National Government. The United States is a federal, constitutional Republic. The Constitution was unanimously proposed on September 17, 1787, by a convention in which eleven States were represented, and was established on June 21, 1788, nine States, the requisite number, having on or before that day given it their ratification. It has been amended six times, the total number of the amendments being fifteen. It carefully distinguishes between and provides for the legislative, executive and judicial functions of government.

The **legislative power** is vested in a Congress, consisting of a Senate and a House of Representatives. The Senate is composed of two Senators from each State, chosen by the legislature thereof for a term of six years. One third of the Senate is retired every two years. A Senator must be not less than thirty years of age, nine years a citizen of the United States and an inhabitant of the State from which he is chosen. The Vice President of the United States is President of the Senate. The House of Representatives consists of 391 members elected by popular vote, from districts apportioned on basis of population. At present there are supposed to be 194,182 inhabitants to a district. A representative must be not less than twenty-five years of age, seven years a citizen of the United States, and an inhabitant of the State from which he is chosen. No bill can become a law until it has passed both Houses and been signed by, or passed over the veto of, the President. Retention by him of a bill for ten days is considered equivalent to signature. In case a President vetoes a bill, it becomes a law if again passed by a two-thirds vote of both Houses. All bills for revenue must originate in the House of Representatives. In case of impeachment the House acts as prosecutor and the Senate sits as jury. The consent of the Senate is necessary for ratification of treaties and confirmation of appointments by the President. The Congress has authority in all federal matters.

The **executive power** is vested in a President. He and a Vice President are chosen for a term of four years by electors. The number of electors from each State is equal to the number of its senators and representatives combined, and they are chosen in such manner as the legislature of that State appoints. A majority of the whole number of electors is necessary for the choice of President and Vice President. The President must be not less than thirty-five years of age, for fourteen years a resident of the United States, and a natural-born citizen. The President is commander in chief of the army and navy. He makes treaties, appoints ambassadors, ministers, consuls, judges of the supreme court, and all other public officers, whose appointment is not otherwise provided for, and takes care that the laws be faithfully executed. The President is assisted by a Cabinet consisting of the Secretary of State, of the Treasury, of War, the Attorney-General, the Postmaster-General, the Secretary of the Navy, of the Interior, of Agriculture, and of Commerce and Labor. These officers are named by him and confirmed by the Senate. Should the President die in office, the succession passes to the Vice President, then to the Secretary of State, and after him to the other members of the Cabinet according to priority in the establishment of their departments.

The **judicial power** is vested in a Supreme Court and such inferior courts as Congress establishes. The Supreme Court now consists of a Chief Justice and of eight Justices. They hold office for life. The country is further divided into 9 circuits with altogether 29 circuit judges. There are also 89 Federal District Courts and a Court of Claims.

State Government. The Union comprises forty-six States. Each State has a governor, a legislative body of two houses, and a judiciary. All powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Industry and Labor. The entire area of the United States is situated in the north temperate zone and is almost wholly included between the 49th and 30th degrees of North latitude. A few hundred miles inland lofty ranges of mountains run north and south, parallel to the Atlantic and Pacific oceans, its eastern and western boundaries. Inclosed by these mountain ranges, is the immense middle section of the country, of which the Mississippi River with its tributary streams forms the artery. Altogether there is afforded the greatest variety in soil, elevation and climate. The mineral wealth is of almost every sort and well-nigh exhaustless. The physical advantages of situation, great natural resources and the energy and intelligence of the inhabitants have combined in developing agricultural, mining, and manufacturing interests. The immensity of the output is rivaled only by its variety. It is estimated that in 1908 there were produced in the United States 2,642,687,000 bushels of corn, 789,161,000 bushels of oats, 660,020,000 bushels of wheat, 167,482,000 bushels of barley, 5,640,446,000 pounds of cotton. The total value of farm products in 1908 is estimated by the department of agriculture at $7,778,000,000. In 1907 the value of the total mining output, therein including metals, ores, minerals, and secondary products, was $2,139,651,952, of which the metals represented $999,665,210. Among the metals: the value of the pig iron output was $580,077,896; copper, $181,660,141; fine gold, $89,191,726; silver, $38,445,181; lead, $37,288,845; zinc, $29,763,735; ferro-manganese, $21,887,946. The petroleum output was valued at $123,260,948. There were mined 193,653,218 tons of anthracite and 463,654,776 tons of bituminous coal. The United States produce more than half the copper of the world, and more coal, iron and steel than Germany and Great Britain combined. In 1905 the capital invested in 216,262 manufacturing establishments amounted to $12,686,265,673. The estimated value of that year's product was $14,802,147,087, about the same as the value of the combined output of France, Germany, and Great Britain. In 1907 the total value of imports was $1,434,421,425 and of exports $1,880,851,078. In 1908, a year of financial depression, the exports were only about $20,000,000 less while the imports diminished to the amount of about $240,000,000.

Religion. The original colonies were settled by men of various beliefs. Some of those colonists had suffered for their convictions and would have gladly excluded all men of a different persuasion. Gradually religious toleration won the day. There is now no state church in the United States and all persuasions are equal in the eye of the law. The first amendment to the Constitution declares that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof. Freedom of worship is also guaranteed in the State constitutions. There is hardly a faith or a modification of a faith that does not have its adherents among the American people. There are about 2,000,000 Jews, and over 12,000,000 Roman Catholics. Nearly all the rest are Protestants, the Methodists and Baptists far in the lead, the former with nearly 7,000,000 and the latter with more than 5,000,000 communicants. The Lutherans are next with 2,000,000; then the Presbyterians and the Disciples of Christ, each with more than a million. Then come the Protestant Episcopalians, the Congregationalists, the Reformed Germans, the Members of the German Evangelical Synod, the Members of the Evangelical Bodies, the Friends, the Reformed Dutch and the Dunkards. The phenomenal growth of the Church of Christ Scientist demands special remark. Founded in the last quarter of the nineteenth century, it now reckons its temples by the hundred and its adherents by the hundred thousand. The minor divisions and subdivisions of sects are almost endless. There are about 400,000 Mormons and 150,000 Spiritualists. Altogether there are over 210,000 church edifices.

Education. The nation puts its confidence in the common school. All the States provide for free elementary and secondary instruction, but the systems vary. In some of the States attendance between certain ages is compulsory and in others it is optional. Some of the older States from the beginning have manifested the utmost interest in education. So too have many of the younger States, especially several west of the Mississippi. Among those States, and not along the Atlantic seaboard, is now found the highest degree of literacy in the country. The annual influx of immigrants and the colored population of the South have tended to reduce the percentage of adults able to read and write. But every year the proportion of illiterates decreases.

There are at present over 19,000,000 pupils in the public and private elementary and secondary schools. The entire number of those receiving instruction in institutions of all grades, elementary, secondary, collegiate, professional, technical, normal, special, is now more than 20,000,000. They are taught by more than 500,000 teachers. The enrollment of students of both sexes in the colleges and universities is not far from 150,000, and in the postgraduate or professional schools it is over 60,000. The indefinite terms, college and university, are applied to about 620 institutions. Many of them originally represented or still represent consecration to some religious doctrine or form and have depended on denominational support. Others, like the great universities of the Middle West and West, have been undenominational from the start and have been maintained by the state. In addition there are numerous philanthropic or beneficent institutions, which afford special facilities as to time and method as well as subject. Various powerful and voluntary organizations and associations have as their chief end the advancement of learning. Large funds, bestowed by broad-minded men and controlled by designated or elected boards, are applied to the same object.

Defense. As far as fortifications are concerned, the land frontier of the United States is practically unprotected. For defense of the ocean coast line, the main reliance is placed in the navy, though the approaches to most of the principal harbors are strongly fortified.

The regular army is small, numbering at present about 76,000 of all ranks. At the option of the President it can be raised to a number not exceeding 100,000. There is also an organized State Militia, mostly enrolled as a National Guard, of about 110,000 men, which can be called out by the President in case of necessity. In both the regular army and the National Guard, enlistment is for three years and is voluntary. The reserve Militia, an unorganized body, includes all other able-bodied male citizens between the ages of 18 and 45, and numbers altogether about 15,000,000.

During the last twenty-five years increasing attention has been paid to the development of the navy. The changed conditions of naval warfare have necessitated its expansion. The Atlantic is no longer the protecting barrier which it formerly was. To-day the ports of the United States can be reached from Europe in a week. An army may perhaps be extemporized in case of emergency, but battleships, requiring many months for their construction, cannot be. In 1909, the American navy consists of 29 battleships, 25 of which are modern; of 8 armored cruisers, 5 first-class cruisers, 7 second-class cruisers, 16 third-class cruisers, 40 gunboats, 16 torpedo boat destroyers, 36 torpedo boats, 3 scout ships, 19 submarines, 10 monitors and 10 unprotected cruisers. The whole is manned by more than 45,000 officers and men The naval militia of the various States numbers more than 6,000 men.

The United States Military Academy at West Point and the United States Naval Academy at Annapolis furnish a thorough and practical training to the young men destined to become officers in the army and navy or marine corps, respectively.

THE PRESIDENTS OF THE UNITED STATES.

GEORGE WASHINGTON.

GEORGE WASHINGTON, **the first President of the United States,** as he had also been the leader of the armies of the United Colonies, was born in Westmoreland County, Virginia, February 22, 1732. His father, a planter, died when the son was eleven years old; his mother lived to the age of eighty-two, dying when her son was in the height of his fame. It was under this mother's care that he had his early education, and to her he owed especially his honor and integrity. He was methodical in his early habits, active in athletic pursuits, and conversant with nature. When seventeen years old he received a commission as a public surveyor, having shown a great aptitude for that career, and at nineteen years was made adjutant general, with rank of major, in charge of one of the militia districts of Virginia, then in peril from the French and Indians. He was at this time residing with a brother at Mount Vernon, Virginia. His brother died, leaving him in charge of his estate, and one of the executors of his will. This business was performed with scrupulous care, but within a year his military jurisdiction was enlarged, and it became necessary for him to supervise one of the four great divisions of the colony.

It was now 1753. The French on the frontier, aided by the Indians, were setting up claims to the territory and making threatening demonstrations. Washington was chosen by Governor Dinwiddie to go as commissioner with large powers, and immediately set out on a perilous journey through the wilderness. The report which he made on his return decided the Governor to take active measures to repel the French encroachments, and Washington was appointed lieutenant colonel in charge of the command. It was a small expedition and the immediate result was insignificant, but it was the beginning of Washington's military career, and his experience stood him in good stead when in 1755 he accompanied General Braddock **on his ill-fated expedition.** He was there in extreme peril; he had four bullets through his coat and two horses shot under him, but he escaped unhurt, and his courage and ability made him a marked man, so that, when immediately afterward the Virginia forces were reorganized, he was appointed commander in chief. He served thus for three years, taking active part in the capture of Fort Duquesne, and then, at the end of a successful campaign, resigned his command and retired to private life. His training in the French and Indian War had given him an admirable knowledge of military affairs. His success had made him the most prominent Virginian in service.

In 1759, in his twenty-seventh year, he was married to Mrs. Martha Custis, a young widow with two children who became his charge. Washington had no children of his own. The joint estate which he now held was large and required great attention, but he could not avoid the public life which was thrust upon him; his neighbors and the colony at large looked up to him, and he took an active part in the discussions which led to the Revolutionary movements. He was a delegate to the first Continental Congress, held in 1774, where Patrick Henry pronounced him the greatest man on the floor for solid information and sound judgment. When the second Congress assembled in 1775, Washington was again a member, and placed at once at the head of most important committees. All eyes were now turned upon him, and when the hour came and the colonies prepared to take up arms in defense of their liberties, he was the unanimous choice of Congress for the post of **Commander in chief** of the American armies.

Washington, profoundly humble, but firm in his conviction of the righteousness of the country's cause, accepted the trust, and was soon on his way to the seat of conflict. On the 3d of July, 1775, in Cambridge, Massachusetts, he drew his sword as commander of the army, beneath a great elm, which still stands, with a commemorative stone at its base. He retained command throughout the war and proved himself a great general, for he was patient and cautious when the odds were against him, prompt and bold to act when opportunity offered, and held the army in his hand now as a shield to protect the country, now as a weapon to strike a decisive blow. He commanded men, for he was a born ruler and he had learned the mastery of himself.

When the war was over he resigned his commission and retired to private life. He would receive no money for his public services, but at once began to devise plans for increasing the resources of Virginia. He liked the life of a country gentleman, and throughout the war had kept close watch of his own estate. It was impossible that he should be left alone. The people again demanded him, when a civil need arose, as great as the military need before. He went as a delegate from Virginia to the Convention which framed the Constitution, and was its presiding officer. Upon the adoption of the Constitution he was unanimously chosen first President of the United States, in 1789. Again he was unfeignedly reluctant but was obedient to the call, which he recognized as one from God. He went to New York to take the office, and his journey was a triumphal procession. After four years of service, he was unanimously chosen for a second term. No other man stood as he in the hearts of men, and by his firmness, his large wisdom, and his singleness of purpose to promote only the good of the country, he kept the young nation together when it was forming, against perils from faction within, and perils from enemies without. He refused to hold office for a third term, and upon leaving the president's chair gave a **Farewell Address** which has the tone of a benignant father to his children. He returned to his country estate, but in 1798, when there was imminent prospect of war with France, the country again turned to him and he was appointed commander in chief of the army. He immediately began the organization of his command, and though the danger was removed, he did not live to know it. He died at his home December 14, 1799, in the sixty-eighth year of his age, and his remains were buried in the family tomb at Mount Vernon, where they still rest. Although in the last years of his life he had been assailed bitterly by political enemies, his death was followed by universal mourning. He was pronounced "first in war, first in peace, and first in the hearts of his countrymen."

JOHN ADAMS.

JOHN ADAMS, who succeeded Washington in the presidency, was associated with him as vice president. He was a Massachusetts man, born October 30, 1735, and at the outbreak of the war for independence was a lawyer. He took a leading part in the early measures of resistance against the British crown, but was not at first in favor of separation; he was very independent in spirit and courageous in his convictions, as when he defended the soldiers concerned in the Boston massacre, taking the unpopular side then as often afterward. He was a delegate to the first and second Continental Congresses. In the latter he proposed the name of George Washington as commander in chief, seconded the resolution for independence introduced by Richard Henry Lee, and was one of a committee of five, the other members being Thomas Jefferson, Benjamin Franklin, Roger Sherman and Robert R. Livingstone, to draw up a declaration of independence. He was not a soldier, but a sagacious, an honest, and a far-seeing statesman, whose best services to his country were not rendered in the field.

In February, 1778, he went to France as one of the commissioners from the new nation. There he made but a short stay, inasmuch as the object of his mission had already been accomplished by Benjamin Franklin after the surrender of Burgoyne. He returned to America in August, 1779. In October of the same year he was again sent abroad by Congress, to wait until Great Britain should be ready to treat for peace. The treaty of peace was signed September 3, 1783, but Adams, who had seen the terms of the treaty decided upon, and by his firmness had saved an important clause regarding the fisheries, was now in Holland negotiating a loan. He was made first minister of the United States to Great Britain, holding that office till near the close of 1788.

Simultaneously with the adoption of the Constitution, Adams returned to the United States and was elected to the office of vice president. This position he held for eight years, and then, upon the retirement of Washington, was elected president. He came into power when the Federal party, to which he belonged, was giving way before the Republican party, headed by Jefferson. Adams was not in sympathy with all the measures advocated by his own party, nor did he get on well with Hamilton, another able leader of the Federalists. The faction in the party and the bitter political feuds throughout the country, together with the fierce European war, brought the United States into the greatest peril, a war with France seeming at one time imminent. Mr. Adams, in conducting the negotiations which avoided a contest, brought upon himself sharp criticism from his own party and, as the close of his term approached, was defeated for reëlection. The rest of his life he spent in retirement at his home in Quincy, Massachusetts. His wife, to whom he was married in 1764, was a remarkable woman as shown by the letters which passed between them during the separation caused by his public duties. His own character is significantly shown in this correspondence, and is well described in the words of his grandson: "Ardent, vehement in support of what he believed to be right, easily roused to anger by opposition, but sincere, placable, and generous, when made conscious of having committed the slightest wrong, there is no individual of his time about whom there are so few concealments of either faults or virtues." He died, July 4, 1826, just fifty years after that Declaration of Independence in which he bore so important a part.

THOMAS JEFFERSON.

When John Adams was elected president, THOMAS JEFFERSON had only three less votes in the Electoral College, and by the system then in vogue was named vice president. He succeeded Adams and held the office of president for two terms, from 1801 to 1809. The Federalists, who had been the special advocates of the Constitution, and had exercised the chief governmental power up to this time, had often been in the minority and yet had retained control because they had a definite policy. Their opponents were at first known by the negative title of Antifederalists, but by degrees the various elements of the opposition became consolidated into a party with a positive political creed. This work of consolidation was largely the accomplishment of their great leader Jefferson. As long as he lived he gave direction to many otherwise divergent forces. He was a comparatively young man when he drew up the **Declaration of Independence,** having been born April 13, 1743; Adams was eight years his senior, and Washington eleven years; but this young man of thirty-three was considered the best equipped to prepare the important document. He was known among his contemporaries as a more scholarly man and one better versed in literature than any of his associates, and he impressed all who knew him with the variety and brilliancy of his intellectual powers.

He continued to represent Virginia in Congress until, in 1779, he was elected governor of Virginia, an office which he held for two years. Afterwards, in 1784, he went to Europe to negotiate treaties with foreign powers, in connection with Franklin and Adams. Upon Franklin's return, in 1785, Jefferson remained as minister at Paris, until 1789, when he came back to America, and was at once invited by Washington to serve as Secretary of State in his Cabinet. Washington's Cabinet was composed of somewhat discordant elements, and Jefferson often found himself at odds with Alexander Hamilton, the Secretary of the Treasury. Jefferson was a determined opponent of centralization. He held that through the distribution of powers good government is effected. His views with regard to the Constitution looked toward the doctrine of State Sovereignty and he was in open sympathy with the philosophers of the French Revolution, who aimed at the reconstruction of society on a more democratic basis. He was democratic in his habits and when in office cared little for traditional ceremony and display.

He was a most able politician and statesman. His fundamental principle was belief "in the accuracy of the popular judgment," and he always relied with supreme confidence upon the people. A strict constructionist of the Constitution, he did not allow his theories, while he continued to hold them in form, to interfere with his action, when circumstances demanded a certain course. When vested with responsibility he cared less to show himself consistent than to guide the country to successful issues. Important policies were pursued during his administration. By the exercise of extreme economy the public debt and the expenses of the government were greatly reduced, but the efficiency of the navy was somewhat impaired, though it won great distinction in the war with Algiers. The **purchase of Louisiana** was the most conspicuous and the most important act of his administration, but one of those acts wherein his theory and his practice disagreed. In the difficulties arising out of European politics and war, Jefferson had been disposed to sympathize with France rather than Great Britain, but as president he found himself forced into antagonism with both countries. Declining urgent solicitation to accept a third term of office, in 1809 he returned to private life at Monticello in Virginia, near the place of his birth. His large hospitality and great reputation brought there many visitors and he retained an active interest in intellectual and political affairs. By a singular coincidence he died on the 4th of July,

1826. Adams, himself dying the same day and being ignorant of Jefferson's death, is said to have uttered as his last words, "Jefferson survives." The epitaph on Jefferson's monument at Monticello, written by himself, indicates what he esteemed the greatest achievements of his life: "Author of the Declaration of Independence, of the Statute of Virginia for religious freedom, and Father of the University of Virginia."

JAMES MADISON.

JAMES MADISON, who succeeded Jefferson, was born March 16, 1751. His home was at Montpelier, in the immediate neighborhood of Jefferson's home in Monticello. A close student and of pure life, he early came into places of responsibility in his native State, and in 1787 was sent by Virginia as one of the delegates to the convention which framed the Constitution. The proceedings of the convention were secret, and posterity has been dependent for an exact knowledge of its doings mainly upon the notes of Madison, which he made with great care and diligence. He was one of the **foremost debaters in the convention,** and when the result was reached he was one of the most able defenders of the Constitution in the long public discussion which followed before the action of the convention was ratified by the people. In connection with Hamilton and Jay he wrote the papers which constitute the series called "The Federalist," his own part being especially the exposition of the powers proposed to be vested in the Union, the relations of the general to the State authorities, and the separation and mutual dependence of the forces of the central authority.

More, perhaps, than any other man, Madison may be regarded as having personal and practical relations with the interpretation of the Constitution. He was one of the two most prominent framers of it, one of the three most able defenders of it before the people; for eight years under Mr. Jefferson he was Secretary of State, and for eight years afterward, namely, from 1809 to 1817, President of the United States. His writings on the subject are the most important which we have, and he is, perhaps, the greatest of American constitutional statesmen. He never swerved from the position which he took at the time of the convention, that an adoption of the Constitution by the States was forever obligatory, and in his old age, when South Carolina held the doctrine of secession, he pronounced it a "colossal heresy." He parted company, however, with Jay and Hamilton quite early in his career, and held within strict limits the State-rights creed, which more than any other man he helped to formulate, especially by what are known as the Virginia Resolutions of 1798–99.

When he entered upon the office of president the country was on the brink of war with England. Jefferson and Madison had strained every point to preserve peace, and the party which they led had suffered in consequence, since the aggressive policy of England had created a strong sentiment of hostility in America. A division arose, therefore, in the Democratic Republican party, and a war faction, coming to the front, took the lead and brought about a change in tactics. From a peace party the Democratic Republicans became a war party, and the change occurring near the close of Madison's first term, it was said that his acceptance of the change had much to do with his reëlection. The second war with England was fought during his administration, and Madison found himself bitterly opposed by the Federalists and also by the peace members of his own party. The brilliant successes of the navy, the final triumph of arms at New Orleans, and the violence of the Federalists, conspired to leave the Democratic Republican party in complete ascendency. Madison's own character was unimpeached, and at the close of his second term he retired to his farm, leading a quiet life in the pursuit of his studies, and succeeding Jefferson as Rector of the University of Virgina. He died peacefully June 28, 1836, in the eighty-sixth year of his age.

JAMES MONROE.

JAMES MONROE was the youngest of the company of men whom we associate as founders of the nation. At the time of the Declaration of Independence, Washington was forty-four years old, John Adams was forty, Jefferson thirty-three, Jay thirty, Madison twenty-five, Hamilton nineteen, and Monroe, who was born April 28, 1758, eighteen years old. One is struck in reviewing these ages to observe how young were the men who took the lead. Franklin alone was an old man of seventy. The rest belonged to the generation just coming on the stage. Monroe was also a Virginian and served with distinction under Washington during the war for independence. He was sent by Washington as **minister to France,** where his republican and antifederal views made him almost a partisan of the French government. In the delicate relations subsisting between England, France, and the United States, the presence in France of a minister so pronounced in his views was embarrassing, and Monroe was recalled, but he was afterwards sent by Jefferson to France in 1803, when he completed negotiations with Napoleon for the purchase of Louisiana, although he had been sent out only to secure New Orleans and a passage to the sea.

The purchase, although largely condemned at the time, proved to be more stupendous in extent and important in its consequences than was at first understood even by those who had most to do with it, and Monroe ever after regarded the act as one in which he felt special pride. It was one of the succession of events which had historical issue in the war for the Union. In 1806 Monroe was appointed, in conjunction with Mr. William Pinkney, minister to England. After his return he was governor of Virginia, and in 1811 was called by Madison to be **secretary of state** in his administration, an office which he held until he was elected in 1816 to succeed Madison as president. When nominated for reëlection at the end of his first term, so near was he to a unanimous election that out of two hundred and thirty-two electoral votes he received all but one. The period of his presidency, especially the earlier part, when the country had closed the war with Great Britain and was entering upon a time of prosperity, was called "the era of good feeling," and a journey taken by the President through the Northern States called out a general expression of harmony. Like Jefferson and Adams he died on the 4th of July, the year being 1831.

Monroe's presidency and his name are especially remembered for the enunciation of what is now known as the **Monroe Doctrine.** The allied sovereigns of Europe proposed to aid Spain in reducing to obedience her revolted colonies in America. Monroe, in a message to Congress, declared that in the war between Spain and her colonies the United States would observe strict neutrality, adding, "That we should consider any attempt on the part of the allied powers to extend their system to any portion of this hemisphere as dangerous to our peace and safety . . . but with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States." In the debates which afterward sprang up about the message, the construction was put upon this declaration which it has ever since borne, that the American continents were thenceforth not to be considered as fields for colonization by any European power. The acquisition of Florida from Spain and the "Missouri Compromise" also signalized Monroe's term.

JOHN QUINCY ADAMS.

JOHN QUINCY ADAMS had been Secretary of State throughout Mr. Monroe's term of office. He collaborated with Mr. Monroe in the enunciation of the Monroe Doctrine and it was fitting that he should be his successor in the presidency. When John Adams went as commissioner to France in 1778, he took with him his son, John Quincy, then a lad of eleven, for he was born July 11, 1767, and kept him with him during his stay in Europe. The son may be said to have grown up in the diplomatic service, having been appointed minister, successively, to the Netherlands, to Portugal and to Prussia. He was chosen to the Massachusetts Senate in 1802, and the next year to the United States Senate. He accepted a position in 1806 as Professor of Rhetoric in Harvard University, but though he had strong literary tastes as well as legal training, his experience and the public demand made a political life inevitable. In 1809 Madison appointed him minister to Russia, and in 1814 he was one of the commissioners who negotiated the peace between Great Britain and the United States, known as the Treaty of Ghent. Shortly after he was made minister to Great Britain, and upon the accession of President Monroe he became Secretary of State.

At the presidential election of 1824, there were four candidates, all of the Democratic Republican party, Andrew Jackson, John Q. Adams, William H. Crawford, and Henry Clay. Since no one received a majority of electoral votes, there had been no choice by the people and the election devolved upon the House of Representatives. That body, voting by States, chose Mr. Adams, though in both the popular and the electoral vote he had been below General Jackson. He took the presidential oath in the face of strong opposition and was confronted throughout his entire term by bitter political enemies. Any measure he might propose was almost sure of defeat. Of independent character, strict integrity, and unflagging industry, he endeavored faithfully to discharge all the duties of his office though encountering in many directions only dislike and studied insult. His diary is a valuable commentary upon contemporary history, and reveals also in emphatic lines the strong, obstinate, suspicious, but high-minded and patriotic man.

He left the White House almost unnoticed, when his successor entered, and indeed turned his back with little show of civility upon Washington and its men, returning to his ancestral farm at Quincy, to live in retirement. In 1831 however he was sent back to the House of Representatives, to which he was constantly reëlected until his death. He was the most notable member of the House at a very stormy period, always defending the right of petition, when Congress, led by the slavery party, attempted to enforce its policy of silence. The occasion of petition was nothing to him in consideration of the right. In 1842 he even offered a petition from persons in Massachusetts for a dissolution of the Union. When Congress undertook to rebuke him he defended the right of petition so powerfully that this defense had a great influence upon the conscience of the country. His death was dramatic, for he fell upon the floor of the House when in the midst of a speech, February 23, 1848.

ANDREW JACKSON.

The election in 1828 of ANDREW JACKSON of Tennessee was in the nature of a political and social revolution. The preceding presidents had been the children of well-to-do families of either Virginia or Massachusetts and had been connected with the establishment of the nation. Jackson's early life had been passed in hardship and all his associations were of a rugged character. He was born in the same year as John Quincy Adams, in 1767, on the 15th of March, in Union County, North Carolina. In 1780, at the age of thirteen, he volunteered with his brother Robert to fight under General Sumter. In 1786 he was admitted to the bar and two years later removed to Nashville, Tennessee. He was a member of the House of Representatives from Tennessee, 1796–98. After his return to his State he was elected by the legislature to a place on the bench of the supreme court, which he held for six years, and during his term of office was chosen major general of the State militia. He resigned his judgeship in 1804 and applied himself to business, but in the rough condition of the country and the times his fighting capacity was a conspicuous part of his reputation, so that upon the breaking out of the war with England in 1812 he came forward rapidly as a military leader. His great reputation was won by his brilliant and successful defense of New Orleans at the close of the war, and from that time he was one of the marked men of the country. Three years later, in 1818, when engaged in quelling disturbances among the Georgia Indians, he disregarded the boundary which separated the United States from the Spanish territory and made a raid into Florida. This act produced a momentary consternation, but the purchase of Florida shortly after removed diplomatic difficulties.

The people liked a man who was willing to take responsibility. The independence and will which Jackson showed made him a popular hero. He was appointed governor of Florida in 1821. At the next general election in 1824 he was nominated for the presidency as a Democrat by the legislature of Tennessee. Though he led the poll, there was, as we have said, no choice by the people, and the House of Representatives elected Mr. Adams. As the close of Adams' term approached, Jackson was again nominated. He was successful by an electoral vote of more than two to one. In 1832 he was again elected for a second term by a still larger majority.

The period was one of great political feeling. Jackson's own individual and remarkable character had much to do with the direction taken by events. He was peculiarly a man of the people, in the sense of deriving his power from their personal rather than political adherence. He had a limited education, little experience in statesmanship, strong prejudices, but much common sense, unwavering patriotism, and, above all, the inborn genius of leadership in any form of conflict. As a Democrat he was opposed to what he regarded as loose constructions of the Constitution: he was especially hostile to the National Bank, and his persistent hostility, which sometimes found expression in what his enemies called arbitrary measures, led finally to the overthrow of the bank. He was also a passionate lover of the Union and when South Carolina attempted nullification, Jackson's will and promptness interposed at once the force of the nation to crush the movement. He had bitter enemies and enthusiastic and devoted friends. His administration "formed an era in the political, social and industrial history of the United States."

Like Washington and Jefferson refusing a third election to the chief magistracy, he retired at the end of his second term and spent the rest of his life in quiet at his country seat, known as The Hermitage, in Tennessee. There he died on the 8th of June, 1845.

MARTIN VAN BUREN.

Jackson's occupancy of office was marked by many and bitter political feuds. The man who most enjoyed his confidence was his Secretary of State, MARTIN VAN BUREN, a native of New York, born at Kinderhook, December 5, 1782. His early education was without special advantages, but the law was his profession, and he was admitted to the bar in 1803. He was early a politician and greatly concerned in party affairs. He held various offices in his State, being member of the Senate, and at one time attorney-general. In 1821 he was elected to the United States Senate, and in 1829, while serving a second term, he was chosen governor of the State of New York. He held this office, however, but a short time, for he was called by Jackson to be Secretary of State. While holding this place he was sent as minister to England, but the Senate refused to confirm the nomination. In the political quarrel which followed he was nominated to the vice presidency in Jackson's second term, and in 1837 succeeded him as president. The principal measure of his administration was the **Sub-Treasury Plan,** which he persistently advocated until it was adopted.

Van Buren was again the candidate of his party when his term closed, but he failed of reëlection. Again, in 1844, he was brought forward, but did not receive the nomination in the party convention. In 1848, when the Democratic party was divided upon the slavery question, Van Buren secured a nomination from the Free-Soil party, an act which could not obtain an election for him, but helped to defeat the regular Democratic candidate. He passed the remainder of his life on his farm, and wrote an "Enquiry into the Origin and Course of Political Parties in the United States." He died at Kinderhook, July 24, 1862.

WILLIAM HENRY HARRISON.

WILLIAM HENRY HARRISON was born in Virginia on February 9, 1773, and spent his early life on the frontier as an officer of the United States army. He was appointed governor of Indiana Territory, and won his greatest fame in conflicts with the Indians, especially at the **Battle of Tippecanoe,** when he defeated the Indian chief Tecumseh. He took an active part in the second war with Great Britain, and in 1828 was sent as minister to Colombia. He was nominated by the Whig party against Van Buren in 1839, and a political canvass followed which was marked by great enthusiasm on the part of the Whigs. The discontent with the administration, which financial distress had helped to create, was turned to account, and Harrison's personal popularity was vigorously used in the prosecution of the canvass. All manner of devices were employed, and the autumn following the nominations became a general political festival. Harrison was elected, but had scarcely chosen his cabinet before he died, April 4, 1841, just a month after his inauguration.

JOHN TYLER.

Mr. Harrison was the first president to die in office. The vice president, JOHN TYLER of Virginia, succeeded to the executive chair. He was born on March 20, 1790, was a member of the State legislature at the age of twenty-one, successively held every office in the gift of his native State and was candidate for the vice presidency in 1836. He had been a political opponent of Jackson and a strong partisan of Henry Clay, but he was, in political education, a follower of the extreme State-rights Democrat, John C. Calhoun. Conscientious to obstinacy, on becoming president, he acted according to his own personal convictions rather than in accordance with the wishes of the party by which he had been nominated. In consequence he was accused of bad faith by the Whig leaders. His administration was notably successful in diplomacy, accomplishing the **Ashburton Treaty** which fixed the northeast boundary of the United States for 2,000 miles, negotiating also the first treaty with China, and asserting the independence of the Hawaiian Islands. On the close of his term he returned to Virginia where he lived in retirement until January, 1861, when he presided over the peace convention called at Washington to avert civil war. A few weeks later he voted for secession in the Virginia State Convention. He died in Richmond, January 17, 1862, being at that time a member of the House of Representatives of the Confederate States.

JAMES KNOX POLK.

JAMES KNOX POLK's election to the presidency followed a very close contest and one of great bitterness. The question of slavery had now come to be the test question, and the proposed annexation of Texas caused great excitement all over the country. Polk and the Democratic party were committed to this measure, but their antagonists the Whigs were divided, the Whig candidate, Henry Clay, by a letter having given indirect encouragement to the annexationists. Polk was not an unknown man though not the first choice of the convention which nominated him. He was born in North Carolina, November 2, 1795, became a member of the bar in Tennessee in 1820, was elected a member of Congress in 1825, and three times was elected speaker of the House. He was a man of ability and industry, but his administration has passed into history as one which did much to identify the slaveholding interest with the ruling party, and the Mexican war, which was prosecuted during his term of office, was favored largely by those who saw in it a means of strengthening the power of the Southern party. He served one term, 1845–49, declining to seek renomination, and died three months after his departure from the White House on June 15, 1849.

ZACHARY TAYLOR.

The Mexican war, though unpopular in certain sections, especially in New England, gave opportunity for some brilliant exploits. The majority of the Whigs opposed that war. Yet, when they sought for a candidate, they took one who, by his services in the war, had won the admiration of the people. ZACHARY TAYLOR was born in Virginia November 24, 1784, but his father early removed his family to Kentucky, where frontier life developed the military ability of the boy. He joined the army in 1807, and Madison, who was a relative, and then secretary of state, procured him a lieutenancy. He was engaged in the war of 1812 and in wars against the Indians, in Arkansas and Florida, and rose through all grades to the rank of brigadier general. In 1846 he was in command of a corps of observation on the frontiers of Mexico, and when the war broke out he at once crossed the Rio Grande and gained a striking victory at Palo Alto. His success afterward at **Resaca de la Palma, Monterey,** and **Buena Vista,** and his general conduct of the campaign, marked him as an able soldier. Though his knowledge of civil affairs was slight, and he had had no political training for the office, his personal popularity made him an available candidate, and he was elected in 1848. He held the chair for sixteen months only, dying from an attack of cholera, July 9, 1850.

MILLARD FILLMORE.

The death of General Taylor brought the vice president, **Millard Fillmore,** into the chair of state, and he held it until the close of the term, March 4, 1853. He was born January 7, 1800, in Locke, now Summer Hill, Cayuga County, New York. His early life was one of struggle with adversity, but he succeeded in securing a legal education, and was admitted to the bar in 1827. Buffalo became his home shortly after, and he was sent to the State legislature. In 1832 and again in 1836 he was elected to Congress, where he made his mark, especially as an advocate of tariff legislation. In 1844 he was nominated by the Whigs to the office of governor of New York, but failed of election. In 1847 he was elected comptroller of the State, and in 1848 was nominated to be vice president. He surrounded himself with an able cabinet and endeavored to follow a middle course between the political extremes. The passage of what is called the **Fugitive Slave bill** during his administration, and his proclamation enforcing it, estranged from him a large section of the Whig party. After his retirement from office he spent some time in travel at home and abroad, and while absent received a nomination for the presidency at the hands of the American party in 1856. He obtained the electoral votes of one State, Maryland. He spent the remainder of his life quietly in Buffalo, where he died, March 8, 1874.

FRANKLIN PIERCE.

FRANKLIN PIERCE, though he had held high political positions and had refused invitations to office, was almost unknown to the people when the Democratic Convention, after forty-eight ineffectual ballotings, named him as its candidate for the presidency. He was born in Hillsborough, New Hampshire, November 23, 1804, and after graduating at Bowdoin College, where he and Nathaniel Hawthorne were intimate friends, studied law under Levi Woodbury. He was member of the State legislature from 1829 to 1833, and speaker of the House during the last year, when he was elected to Congress and served two years in the lower house. In 1836 he was sent to the United States Senate, but at the close of his term returned to the practice of the law. In the Mexican war he became a volunteer, was colonel in command of a regiment, and saw some service. He resumed his practice afterward, and in 1852 was nominated for the presidency. The Whig candidate was General Winfield Scott, who in the Mexican war had gained little less distinction than General Taylor had done. Pierce received more than six sevenths of the entire electoral vote and the Whig party rapidly disintegrated, never again putting a presidential ticket in the field. Though a Northern man Pierce sympathized with the extreme Southern school. Yet as chief magistrate he showed little ability to direct or command. Personally agreeable, of elegant manners, most estimable in private life, he lacked vigor for the conduct of affairs and merely drifted with the tide. He failed to receive a renomination in 1856; and, retiring to private life, died at Concord, New Hampshire, October 8, 1869. During his term the **"Missouri Compromise" was repealed,** opening the Territories to slavery.

JAMES BUCHANAN.

The contest between the slave power and the antislavery sentiment had been growing in intensity during Pierce's administration, so that at the election in 1856 a great increase in the popular vote for the antislavery, now called the **Republican,** candidate occurred; but the Democratic party was highly organized, and responded, moreover, to the will of the South, which was now thoroughly sensible of its declining power, and put forth a strong effort to retain control. The Democratic candidate was one who had long been in political life and was conversant with men and affairs. JAMES BUCHANAN was born in Franklin County, Pennsylvania, April 23, 1791, graduated at Dickinson College, and in 1812 was admitted to the bar. He was a Federalist in the early days. He was sent to Congress in 1821, after serving in the State legislature, and was ten years in the House. In 1831 he was sent as minister to Russia by Andrew Jackson, to whose party he had attached himself, and in 1833 was chosen to the United States Senate, where he supported Jackson and Van Buren. He was President Polk's Secretary of State, and was sent by Pierce as minister to England. Whilst there he joined the ministers to France and Spain in a paper called, from the place where it was drawn up, the **Ostend Manifesto,** in which an attempt was made to force the United States into a policy for the possession of Cuba, a policy which formed part of the Southern program, since it would erect an additional safeguard to slavery.

Upon his elevation to the presidency he was aware of the gathering strength of the antislavery sentiment and used his political skill to avert the impending conflict, seeking in vain to secure a blind peace. In his annual message of 1860, after the election of Abraham Lincoln, he still sought to allay the agitation of the question, but tied his own hands against taking action by accepting the construction of the Constitution under which the South justified its preparation to secede. He held the State-rights views which had become a part of the Democratic creed, but though he called himself a Jackson Democrat, he lacked his great predecessor's overmastering loyalty to the Union, and the last months of his nerveless administration saw him helplessly suffering an ignominious reduction of national authority. The events which followed his administration so plunged him into obscurity, that his death, in 1868, was almost a surprise to people at large, so entirely had he been forgotten.

ABRAHAM LINCOLN.

When ABRAHAM LINCOLN was nominated by the Republican Convention at Chicago, in May, 1860, many at the East asked in astonishment who he was, and there was a general expression of disappointment that men of long experience in public life had been set aside at this grave juncture for one so untried. But in the West his nomination at once excited enthusiasm, for though he had been in public life for a short time only, his personal presence was a familiar one, and his strange, homely force had created a growing respect for him. He was born in Hardin County, Kentucky, February 12, 1809, of obscure parentage, his father being unable to read or write; his early life was passed amid hardships and in a slow development of mental power. At nineteen he was a common hand on a flatboat, and for a few years was occupied with some of the humbler forms of trade, while he patiently sought a qualification for higher pursuits. He enlisted in the war against the Black Hawk Indians, and was chosen captain of a company. After various vicissitudes he secured admission to the bar, and at the same time was urged by his friends, who early were won by his strong, kind nature, to accept political office. He was a great admirer of Henry Clay, and in 1844 took an active part in the canvass for his election. He had been identified from the beginning with the Whig party, and in 1846 was elected to Congress. He was not conspicuous in the House, but in the test questions upon slavery was always found upon the side of those who would

restrict it and obstruct its encroachments. He was a candidate for election to the Senate in 1849, but was defeated. He was at this time engaged in the practice of his profession at Springfield, Illinois. As the Whig party melted away and the Republican rose, he attached himself to the latter, and was urged by his neighbors as a candidate for the vice presidency with Frémont in 1856. He did not receive the nomination, but two years afterward he was chosen with great unanimity to confront Stephen A. Douglas, who was the Democratic candidate for United States senator. Douglas had a powerful following and was one of the most prominent men in the country. A memorable campaign followed, when the two rivals fought the intellectual battle in a series of personal encounters throughout the length and breadth of the State. Lincoln's homely force, his unfailing good nature, and the moral strength of his convictions made a deep impression upon his auditors; he failed of an election by the legislature, although he had secured a popular majority, but the contest served to make him more conspicuous and trusted. His nomination in 1860 was followed by his election, and the minds of the North turned anxiously to the subject of their choice. At first he disappointed many: he did not move quickly enough for some, he seemed to others unappreciative of the gravity of the situation. His advent into Washington at the time of his inauguration was in concealment and appeared to indicate timidity, and his inaugural words seemed to strike again the hopeless note of compromise.

Nevertheless there was something in his quiet manner which inspired confidence, and his regard for the Constitution was plainly a part, also, of his ingrained sense of the sanctity of the Union. He sought by practical means to hold the South in willing loyalty to the federal bond, but when the blow was struck at Fort Sumter there was no delay in taking his place at the head of the armed forces of the nation. He addressed himself at once to the people; he had confidence in them, and in the four years of the war which followed he never swerved from his faith. The confidence which he reposed in the people was returned, at first slowly, at last unreservedly. The history of the war and of the political measures which marked its course is a history of President Lincoln's administration. He had no arbitrary ways; he assumed no power, but he was patiently responsive to all the signs of the time, and moved at the head of the people, taking successive steps only as he was sure that they were close behind him. He was never separated from them in this solemn leadership, and he turned from time to time with words of cheer, of encouragement and trust, which were of great importance in fixing confidence when it was wavering.

There was an absence of ceremony often in his ways which disconcerted many people, and those who knew him slightly thought him often a mere jester. The South recognized his power more thoroughly, as the intensity of its hostile expression showed. His power grew more impressive as the hour came when victory was in the hands of the Union, and the President, abating nothing of the claims which the country made, stretched out a hand of welcome to the Southern States. He had been reëlected by the people to a second term of office, and in January, 1865, overtures for peace were received, which were immediately responded to by Mr. Lincoln. He sent Mr. Seward to Fortress Monroe to meet commissioners from Jefferson Davis, and, in his eagerness, having little regard for what might be said, followed himself and joined the conference. His action was not misunderstood, and the temper in which his mind worked was nobly illustrated by the speech which he delivered upon the occasion of his inauguration. The conference had been fruitless, but the fortunes of war were fast solving the problem. Mr. Lincoln did not live to see the consummation of his desires. On the night of Friday, April 14, 1865, while sitting in a private box at Ford's Theater, Washington, he was shot by an assassin. He died the next morning at a few minutes before seven o'clock. His death plunged the nation into mourning, but it lifted the victim into the place of a martyr.

ANDREW JOHNSON.

When Lincoln was nominated for a second term the near approach of the end of the war led to a desire to associate with him some one who should represent the South, not the South which had seceded, but the South which had remained faithful to the Union. The selection was made of Andrew Johnson, of Tennessee, and upon the death of Lincoln he succeeded to the office of president. He was born at Raleigh, North Carolina, December 29, 1808, and knew a youth of poverty and privation. He was unable to read or write until taught by his wife, but his natural ability and force of character carried him rapidly forward from local offices to positions in the Tennessee legislature, until in 1842 he was elected to the House of Representatives in Congress, where he remained for ten years. He supported Polk and his measures, and accepted without reserve the Democratic creed of that day. In 1853 he was elected governor of his State, was reëlected in 1855, and in 1857 was sent to the United States Senate. As the secession movement grew imminent, Johnson took an attitude of intense hostility to it, and in speeches both in and out of Congress opposed it with all his might. His position was almost singular; no other public man in the South of his position made so gallant a resistance, and he won the confidence of the people at the North in a marked degree. President Lincoln made him provisional governor of Tennessee, and on his accession to power great expectations were entertained of his firmness and courage. As president, however, his old views as to the relations of the States with the Union soon brought about a disagreement with Congress, and his personal characteristics, together with the existence of a large controlling majority of the Republican party in Congress, widened the breach. Direct antagonism grew up. The House of Representatives finally took the ground that the President had violated his oath, and impeached him for high crimes and misdemeanors. The trial by the Senate began on the 23d of March, 1868, and terminated on the 20th of May, with a failure to secure conviction. His term of office expiring the next year, he retired to his home in Greenville, Tennessee. He was a candidate for a seat in the United States Senate in 1870, but was defeated. He succeeded, however, in 1875, but he served only at the extra session in that year, dying July 31, 1875.

ULYSSES SIMPSON GRANT.

The quarrel between President Johnson and Congress had come to a crisis over the case of the Secretary of War, Stanton, whom the President, at one stage of the contest, suspended from office, filling the place in the interim with General Grant. In the excitement and disturbance of the public mind, the appointment did much to cause a sense of security, since General Grant enjoyed a great measure of confidence, and by his success in the prosecution of the war had won immense popularity. He was born April 27, 1822, at Point Pleasant, Ohio, and baptized as Hiram Ulysses, but by an accident was entered at the West Point Military Academy, to which he had received an appointment, as Ulysses S., with the assumption that he carried his mother's maiden name of Simpson. The error was perpetuated and Grant came to carry through life the significant initials. After his course was completed at West Point, the Mexican war occurred and he was ordered with his regiment to join General Taylor's army in Texas. He saw active service as second lieutenant and quartermaster, and after the close of the war, when he married, he was ordered to Oregon, where he received his commission of captain. In 1854 he resigned his commission, returned to St. Louis, near which he owned a small farm, and in 1859 went to Galena, Illinois, where he joined his father and brothers, who were engaged in the leather trade.

He was living here when the war broke out. Three days after the call for volunteers a public meeting was held at Galena, at which he presided. Within a week he was drilling a company of volunteers, and on the 23d of April went to Springfield with them. He was commissioned captain, made colonel of the Twenty-first Regiment Illinois Volunteers, and shortly after brigadier general, each promotion coming to him unsought. From this time forward his services form a part of the military history of the war for the Union; he rose rapidly to the highest rank and was recognized as one of the great generals of modern times.

The close of the war found General Grant the hero of the hour. The death of President Lincoln left him still more conspicuous, and wherever he went he received the most enthusiastic welcome by the people, as well as large gifts as an expression of the gratitude felt toward him. He remained chiefly in Washington, and sought in vain to heal the breach between the President and Congress; he refused as far as possible to take sides with either party; but his judgment, expressed upon every fit occasion, was against the impolitic course of the President. Before the close of Johnson's term Grant had been forced into collision with him on many points, and his elevation to the presidency was clearly foreshadowed. He was nominated by the Republican party in May, 1868, and elected by a large majority. During his first term the great question of **Reconstruction** of the Southern States was uppermost, and the plan formed by Congress was carried out. There followed a gradual restoration to power of the ruling class at the South, and a disappearance from political influence of the Republican party there, made up as it was of the great body of blacks under the lead of a few whites. The return to power of the men who were identified with the secession, especially under circumstances which pointed at oppression and intimidation of the blacks, created great uneasiness at the North. Grant was again elected, somewhat under pressure of this sentiment, and served for a second term. His administration was beset with difficulties, and the corruption which accompanied the unhealthy speculative activity of the country in the years following the war came alarmingly into notice, affecting men high in power. Congress was greatly under the influence of inflation views, and Grant now earned the thanks of the nation by the interposition of his veto upon a bill which threatened a disastrous further expansion of the currency. At the close of his second term, he was not looked upon as a man who could lead the Republican party to further victory, and there was, moreover, a strong current of feeling against a third term, no president having held the office longer than eight years.

During the administration which followed, Grant visited various foreign countries, and everywhere received great attention as the most illustrious living American. When in 1880 he was a candidate for a third nomination the section of the party opposed to him prevailed. His statesmanship had not matched his soldiership. But his former place in his countrymen's estimation was more than regained during his last days, when, in heroic endurance of a distressing disease, he composed for the benefit of his family a personal memoir of high merit, and spoke memorable parting words of affection for his reunited country. He died July 23, 1885.

RUTHERFORD BIRCHARD HAYES.

The next occupant of the White House was Rutherford Birchard Hayes. He was born on October 4, 1822, at Delaware, Ohio, educated at Kenyon College, Gambier, and at the law school of Harvard University. He practiced his profession successfully in Cincinnati, and, without engaging very closely in politics, made a careful study of history and statesmanship. When the war for the Union opened he refused a commission until he had mastered the tactics, but having accomplished this he was made successively major, lieutenant colonel, colonel, and brigadier general. He saw severe fighting and kept to his post steadily until the war closed. He was chosen representative to Congress during the last year of the war, and, without being prominent on the floor, was an indefatigable worker. In 1869 he was nominated to be governor of Ohio, and held the office two terms. Again in 1875 he was elected after an exciting campaign, and his ability and popularity made him a conspicuous candidate for the presidency in 1876. He was chosen the candidate of the Republican party, and opposed to Samuel J. Tilden who was nominated by the Democrats. The election was closely contested, and after its close the country was kept in suspense by uncertainty as to the result, both parties claiming the votes of certain States. This dispute was settled only by an agreement to refer the decision to an **Electoral Commission** created by Congress, consisting of five senators, five representatives, and five justices of the Supreme Court. The decisions of this body, by a vote of eight to seven, gave the election to Mr. Hayes, on March 2, 1877, declaring that he had received 185 electoral votes to 184 received by Mr. Tilden, but his title was bitterly challenged throughout his term of office by many persons who considered the decision of the Electoral Commission unjust. He announced at once his determination to secure if possible a fair opportunity for the people of the South to demonstrate the sincerity of their professions of concord, and withdrew the military forces by which alone Republican governors in Louisiana and South Carolina could maintain their office and authority. Personally upright and sincerely desirous to purify the administration of the government from abuses, he was handicapped in his best endeavors by the manner of his election. He died January 17, 1893.

JAMES ABRAM GARFIELD.

The candidate brought forward by the Republican party to succeed Mr. Hayes was James Abram Garfield, who had long been identified with the public service, and was probably more widely known in the country than any other man of his years. Born November 19, 1831, in Orange, Ohio, he was obliged to struggle with poverty in his early years; but he had an unconquerable thirst for knowledge, and, in spite of all obstacles, secured a preparation for Williams College, from which he was graduated in 1856. He chose teaching for his profession, but was sent to the Ohio Senate in 1859, and when the war broke out he enlisted and was rapidly promoted to the rank of major general.

In the autumn of 1862 he was elected to Congress from the nineteenth Ohio district, and served by repeated reëlections until, near the close of the Hayes administration, he was chosen United States senator. Before he could take his place, however, he was nominated and elected president. He entered upon the office to which he was elected, March 4, 1881. On the 2d of July of the same year he was shot and mortally wounded in a railway station in Washing-

ton by a disappointed office seeker. His death did not follow until September 19, 1881, at Long Branch, New Jersey, whither he had been removed in hopes of a benefit from the change of air and scene. His long sickness was borne with a courage and serene patience which exalted him in the eyes of the people.

CHESTER ALAN ARTHUR.

The vice president who succeeded President Garfield upon his death, CHESTER ALAN ARTHUR, was born at Fairfield, Vermont, October 5, 1830. He was educated at Union College, and followed the profession of the law, being admitted to the bar in New York city in 1852. During the war he was quartermaster-general in New York, a position which he held with signal credit. In 1871 he was appointed collector of the port of New York by General Grant, and though in President Hayes's administration he was removed from office, it was on political grounds alone, his personal integrity being unquestioned. In 1880 he was nominated for the office of vice president, was elected, and upon President Garfield's death at once took the oath of office as president.

His administration was marked by an evident determination to avoid further political dissensions within the party, and to make important public appointments with special reference to the dignity of the public service. There were thus few changes in the cabinet, and offices were filled with great caution. An act looking to reform of the civil service, through appointments and promotions for merit after competitive examinations, was passed. A special effort was made, near the close of the term, to effect commercial treaties with Spanish-speaking countries on both sides of the Atlantic. As the administration of Mr. Arthur drew near its end, there was an unsuccessful movement among the President's friends to secure his nomination for another term. He retired to private life. His death occurred November 18, 1886.

GROVER CLEVELAND.

(STEPHEN) GROVER CLEVELAND was born on March 18, 1837, in Caldwell, New Jersey. By the death of his father, who was a country minister in New York, he was thrown on his own resources at the age of sixteen, and went to Buffalo, New York, where he became a clerk in a lawyer's office. He was admitted to the bar in 1859. In 1870 he was elected sheriff of Erie County, but resumed the practice of law after serving his term of three years. In 1881 he was elected mayor of Buffalo, and the next year chosen by a very large majority governor of New York. He discharged the duties of those offices with eminent success. Representing the reform element in politics, he was nominated in 1884 for the presidency by the National Democratic Convention. The Republicans named James G. Blaine, who had been Secretary of State under President Garfield and a prominent candidate for the nomination at the two preceding conventions. Mr. Cleveland was elected after a close and angry contest.

In the following November Vice President Hendricks died. Congress, mindful of the need of a better provision of law than then existed for the administration of government in certain possible exigencies, passed a **presidential succession** bill, by the terms of which, if the president dies and there is no vice president, the office of president is to be filled by a member of the president's cabinet, the order of precedence being that in which the several secretaryships were established. Near the close of his administration Mr. Cleveland made a strong appeal to Congress and through Congress to the people, to provide for the extinction of a large surplus in the Treasury, and to prevent the accumulation of such a surplus, by a corresponding reduction in the imposition of duties on imports. The Democratic party renominated Mr. Cleveland, but he was defeated, and the Republican candidates, Harrison and Morton, were chosen.

In the **presidential election of 1892,** Mr. Cleveland and Mr. Harrison were again placed in nomination by their respective parties, and the issue turned largely upon the question of maintaining a high protective tariff. The Democratic party was successful, and Mr. Cleveland was elected.

Early in his second administration he called a special session of Congress for the purpose of securing legislation which should repeal that portion of the Sherman Act of 1890 relating to the compulsory purchase of silver. The policy of tariff reduction was embodied in the Wilson bill, and passed by the House but so materially altered in the Senate in the direction of higher protection that President Cleveland declared it a betrayal of party pledges and reluctantly allowed it to become a law without his signature. The President maintained the redemption of all government obligations in gold and sanctioned large issues of bonds to procure the funds for this purpose. His most striking act was his message to Congress in December, 1895, strongly asserting the Monroe Doctrine and making the United States an active party in the boundary dispute between Great Britain and Venezuela.

During his second term an increasing antagonism arose between the President and the Democratic party. The nominations and platform of the National Convention at Chicago in 1896 emphasized this alienation. On retiring from office Mr. Cleveland took up his residence at Princeton, New Jersey, where he died on June 24, 1908.

Mr. Cleveland was a man of rugged honesty, indomitable will, and rigid adherence to what he regarded as duty. Conservative by natural temperament, phlegmatic by disposition, strong-willed and self-reliant almost to obstinacy, the temper of his mind fitted him to dominate rather than to lead.

BENJAMIN HARRISON.

MR. HARRISON, elected in 1888, with Levi P. Morton of New York as vice president, was a grandson of the ninth president, William Henry Harrison. He was born near North Bend, Ohio, August 20, 1833, and was graduated from Miami University, Oxford, Ohio, when he was eighteen, and before he was twenty-one had married and was practicing law in Indianapolis. He took an active part in politics, supporting Frémont in 1856 and Lincoln in 1860. At Governor Morton's request, he raised a company shortly after the commencement of the war for the Union, and by rapid promotion became colonel of the Seventeenth Indiana. He was brevetted brigadier general for gallant service, and before the war closed was a brigadier general in full commission. He was a candidate for the governorship of Indiana in 1876, but was defeated. In 1880 he was elected to the United States Senate, where he served his term of six years. He was inaugurated president, March 4, 1889. In accordance with the recommendations of Mr. Harrison, Congress passed a highly protective tariff measure, called from the name of its principal framer, the McKinley bill. In addition to a protective tariff, Mr. Harrison favored subsidies in aid of ocean shipping, federal intervention to secure to the colored citizens of the South the free exercise of the right to vote, justice to the Indians, reform of the civil service, a great enlargement of the pension list, and international arbitration. During the second half of his term Mr. Harrison was hampered by the party revolution of 1890, which made the House of Representatives Democratic. He was renominated in the presidential campaign of 1892, but lost the election. In 1893 he resumed the practice of law at Indianapolis. Throughout his public and private life he was courageous and conscientious, and, although deficient in the arts and traits that make men popular, possessed the respect and esteem of the American people. Mr. Harrison died March 13, 1901, at the age of sixty-eight.

WILLIAM McKINLEY.

WILLIAM MCKINLEY was born at Niles, Trumbull County, Ohio, January 29, 1843. He studied at Union Seminary, Poland, Ohio, and later, for a short time, at Allegheny College, Meadville, Pennsylvania. At the outbreak of the Civil War he enlisted at the age of eighteen as a private soldier in the Twenty-third Ohio, and rose through the several grades until, on July 25, 1864, he was brevetted major by President Lincoln for gallant and meritorious services at the battles of Opequan, Fisher's Hill, and Cedar Creek. He was mustered out with his regiment July 26, 1865.

At the close of the war he returned to Ohio, studied law, and began the practice of his profession at Canton, Stark County. He was a member of Congress from 1876 until 1891, and was chairman of the Committee of Ways and Means when, in 1890, the tariff bill that bears his name was framed and passed. The defeat which came upon the Republican party in the next congressional election included Mr. McKinley, but he was at once taken up as the Republican candidate for the governorship of Ohio, and was elected in November, 1891. He was renominated in 1893, and was reëlected by the largest majority, with one exception, ever given in the State. At the Republican National Convention of 1896, he was nominated for the presidency on the first ballot. He was elected in November over the Democratic candidate, William Jennings Bryan, of Nebraska. In 1900 he was renominated unanimously, and was reëlected, his Democratic opponent being again William Jennings Bryan, but his second administration was cut short by his death September 14, 1901.

The four and a half years during which Mr. McKinley was president were marked by events of exceptional importance. The Wilson Tariff, enacted under the preceding administration, was promptly replaced by the Dingley Bill of 1897, a measure more productive of revenue as well as more highly protective. The Dingley Bill fulfilled amply the promises of the Republican party and of Mr. McKinley in respect to the tariff. The second of the two great issues of the campaign of 1896 related to the currency. But decisive action in regard to the currency was delayed by a fruitless effort in behalf of international bimetallism, and by the war with Spain. It was not until 1900 that gold was definitively made the basis of the currency. The feature of Mr. McKinley's administration which seems likely to influence the welfare of the United States longest and most deeply is its over-sea **territorial annexations.** The opportunity to make these (with the exception of the Hawaiian Islands) was due to the war with Spain, in 1898, for the deliverance of Cuba. The acquisition of the Philippines made it necessary to provide for the government of dependencies of the American Union. The grave constitutional questions involved were settled by the Insular decisions of the Supreme Court in a way that sustained the general policy of the government. A second important result of the war was the responsibility incurred by the United States toward Cuba. In the discharge of this responsibility the United States established a temporary protectorate, reorganized Cuba according to American ideas, and secured, through the adoption of the Platt Amendment by the Cuban Constitutional Convention of 1901, a large degree of influence over Cuban policy, the right to establish naval stations in Cuban territory, and in certain specified cases the right of intervention. The part taken by the United States in the troubles with China, occasioned by the Boxer outbreak, was dignified, pacificatory, and effective. At home the period was marked by an almost unprecedented economic prosperity and the rapid subsidence of sectional feeling. On September 5th, six months after his second inauguration, Mr. McKinley made at the Buffalo Pan-American Exposition his last public address, a noble plea for international peace and friendly coöperation. On the 6th he was shot by an anarchist, and eight days afterward died from the wound.

Mr. McKinley was a peacemaker. He carried friendliness into every relation of life, public as well as private. He healed party feuds, softened the asperities of party warfare, and assuaged sectional animosities. His spirit toward other peoples is best told in the following words taken from the Buffalo address: "God and man have linked the nations together. No nation can longer be indifferent to any other. And as we are brought more and more in touch with each other, the less occasion is there for misunderstandings, and the stronger the disposition, when we have differences, to adjust them in the court of arbitration. . . . Let us ever remember that our interest is in concord, not conflict. . . . Our earnest prayer is that God will graciously vouchsafe prosperity, happiness, and peace to all our neighbors, and like blessings to all the peoples and powers of earth."

THEODORE ROOSEVELT.

THEODORE ROOSEVELT was born in New York on October 27, 1858. He graduated from Harvard College in 1880. In 1881 he was elected to the legislature of New York, in which he served three years. At the age of twenty-six he was, in 1884, one of the four delegates at large to the National Republican Convention. A party man, he supported the nominee of the convention, Mr. Blaine, whose nomination he did not favor. Shortly afterward he engaged in cattle raising on a ranch in North Dakota. Returning to the East, he was in 1886 unsuccessful candidate for mayor of New York. He was member of the Civil Service Commission (1889–95) and president of the New York Police Board (1895–97), in both positions showing himself courageous and efficient.

Assistant Secretary of the Navy in 1897, he aided much in preparing our navy for the impending war with Spain. A year later he resigned to help raise the regiment of the "Rough Riders," of which he was at first lieutenant colonel and later colonel, and at the head of which he rendered distinguished service in Cuba. Elected governor of New York in 1898, he was nominated for the vice presidency by the National Republican Convention at Philadelphia in 1900. Six months after entering upon his duties as vice president, the death of McKinley raised him to the presidency. He took the oath of office on September 14, 1901.

When about to assume his duties as president, Mr. Roosevelt said, "It shall be my aim to continue, absolutely unbroken, the policies of President McKinley for the peace, the prosperity, and the honor of our beloved country."

In his first annual message to Congress he indicated what later proved the **main features in his policy.** He recommended that the civil and military services be brought to the highest possible efficiency, that the Monroe Doctrine be maintained, that the trusts be regulated rather than suppressed, that labor and capital each have fair play, that works of irrigation be advanced, and that a trans-Isthmian canal be constructed as quickly as possible.

In 1904 Mr. Roosevelt was unanimously nominated for the presidency at

the National Republican Convention. The opposing Democratic candidate was Judge Alton B. Parker of New York. The campaign was somewhat colorless. Mr. Roosevelt's popular majority was 2,542,062, the largest ever given a presidential nominee. Moreover, it was the first time that a man who has succeeded to the presidency through the death of the president, was himself subsequently elected by the people to that office.

No other president was equipped for the discharge of his official duties with such an exhaustless store of vigor and vitality. No other president ever developed such energy and activity. His administration of nearly eight years, though in a time of profound peace, is best characterized by the adjective strenuous.

Familiar through his constant travels with all parts of the country, he appreciated in remarkable degree the peculiar circumstances and necessities of each section. Some of the trusts he caused to be prosecuted; he made an effort to regulate the railroads and to protect employees against the obligation of bearing the entire consequences of negligence. He encouraged the effort to develop the internal ways and to preserve and increase the natural resources of the nation.

In 1905 the rights of the French Panama Company were purchased by the United States, a satisfactory treaty was concluded with the Republic of Panama, and the piercing of the Isthmus was soon vigorously undertaken. This is the most important event of President Roosevelt's administration. As long as the Panama canal endures, it may be considered his monument.

The appropriate conclusion of Mr. Roosevelt's presidency was the globe-encircling cruise of the battleship fleet, affording practical solution of many naval problems and proclaiming, wherever it went, the majesty of the Republic and its friendliness to all.

In addition to carrying the responsibilities incumbent upon his office, there is hardly a matter of national or humanitarian interest or even of international concern with which he did not deal. Thus he was instrumental in terminating the coal strike of 1902 through the medium of a commission composed of representatives of the conflicting interests, with distinguished jurists and economists, the findings of which have had lasting weight in similar labor disputes. He took the initiative in bringing about a treaty of peace between Russia and Japan in 1905. He has been a tireless speaker and writer. In his numerous lectures and addresses there are few subjects of moment on which he has not spoken. He is the author of many books, among which the more noteworthy are, *The Winning of the West*, *The Strenuous Life*, and lives of Thomas Hart Benton, Gouverneur Morris, and Oliver Cromwell.

In 1908 Mr. Roosevelt refused the solicitations of his party, which wished to force a renomination upon him, and in the preliminaries of the Republican National Convention as well as during the ensuing campaign exerted all his influence to insure the success, as the Republican nominee, of his friend and his secretary of war, William Howard Taft, of Ohio.

Shortly after leaving the White House Mr. Roosevelt headed the Smithsonian African Expedition, devoting nearly a year to the hunt in Africa and obtaining an exceedingly rich collection of African fauna. On his way homeward he delivered addresses before many famous societies and universities of continental Europe and Great Britain. His progress across Europe was attended by a continuous ovation, only to be surpassed by the tremendous demonstration on his arrival at New York in June, 1910.

Before the close of his presidential term he accepted the position of contributing editor of THE OUTLOOK, a position he still holds. But no editorial chair could suffice for his boundless activity. He took an energetic part in the state campaigns of 1910 and again in the presidential campaign of 1912. Failing to receive the nomination for the presidency from the Republican National Convention, he ran as the candidate of the National Progressive party, but was defeated. During the campaign the attempted assassination of Mr. Roosevelt by a lunatic at Milwaukee shocked the nation but afforded fresh demonstration of his amazing vitality and courage.

He resides at Oyster Bay, Long Island, New York.

WILLIAM HOWARD TAFT.

WILLIAM HOWARD TAFT, twenty-seventh President of the United States, was born in Cincinnati, Ohio, on September 15, 1857. His father, Judge Alphonso Taft, was Secretary of War and Attorney-General in the Cabinet of President Grant, and Minister to Austria-Hungary and to Russia during the administration of President Arthur. His mother, Louise M., was the daughter of Samuel D. and Susan Waters Torrey of Millbury, Massachusetts.

Mr. Taft graduated from Yale in 1878, class orator and salutatorian, and from the Cincinnati Law School in 1880. In June, 1886, he married Miss Helen Herron, daughter of John W. Herron, Esq., of Cincinnati. He was judge of the Superior Court of Ohio, 1887–90, Solicitor-General of the United States, 1890–92, and United States Circuit Judge, 6th Circuit, 1892–1900. He then served as President of the United States Philippine Commission, March 13, 1900–February 1, 1904, and as first Civil Governor of the Philippine Islands, July 4, 1901–February 1, 1904. In 1902, by direction of President Roosevelt, he went to Rome to confer with Pope Leo XIII. concerning the purchase of the agricultural lands of the religious orders in the Philippines. On February 1, 1904, he became Secretary of War.

He received the degree of LL.D. from Yale in 1893, and was made a member of the Yale Corporation in 1907. In 1902 and again in 1906 an appointment as associate justice of the Supreme Court of the United States was tendered him by President Roosevelt, but was declined. In 1906 he was sent by the President to quiet the troubles in Cuba, and for a time acted as provisional governor of the island. In March and April, 1907, he visited Panama, Cuba and Porto Rico by direction of the President to remove various difficulties. Later in the year he visited the Philippines and Japan, returning to America via Russia.

He was nominated for the presidency on the first ballot by the Republican National Convention at Chicago on June 18, 1908. The next day he tendered his resignation as Secretary of War. His Democratic antagonist was William Jennings Bryan, who a third time had been chosen as leader by his party. The campaign was one of great activity though marked by many political amenities. Both Mr. Taft and Mr. Bryan as well as the other candidates participated vigorously, each delivering several hundred speeches. At the election on November 3, 1908, Mr. Taft received in the popular vote a plurality of more than a million over Mr. Bryan and a majority of more than four hundred thousand over Mr. Bryan and the other candidates combined. The vote in the electoral college was 321 for Mr. Taft and 162 for Mr. Bryan.

During the four years of his administration the country enjoyed general prosperity. There was no financial panic. Work was pushed on the Panama Canal. Some of the larger so-called trusts were vigorously prosecuted. Many judicial appointments of a high order were made. Discretion was shown in dealing with the complicated questions arising from the distracted condition of the Republic of Mexico.

The Payne-Aldrich Tariff Bill, which he signed but which he had not been supposed to approve, and the Reciprocity Agreement with Canada, afterwards rejected by Canada though passed by Congress in a special session, greatly affected his popularity. Quarrels between members of his Cabinet and their inferior officers, together with frequent insubordination which he was slow to suppress, further damaged his prestige.

Meanwhile the Republican party was splitting into two hostile camps, the reactionaries or standpatters and the insurgents or progressives. Casting his lot with the former, his candidacy for a second presidential term was hotly opposed by the latter, who found an exponent and leader in Mr. Roosevelt. Their attacks on Mr. Taft and his administration finally induced the President himself to enter the campaign in person, and a bitter struggle ensued in the effort to secure a majority of delegates to the Republican National Convention. That convention by a small majority conferred the regular party nomination on Mr. Taft. Shortly afterward Mr. Roosevelt received the nomination of the newly-constituted National Progressive Party. Both were overwhelmingly defeated at the polls by the Democratic candidate, Governor Wilson of New Jersey.

Shortly before relinquishing office, Mr. Taft was tendered and accepted an appointment as Kent Professor of Law in Yale University.

It is too early to pass judgment upon his administration. The honesty, kindliness, good intention, and patriotism of Mr. Taft are universally recognized. Nothing better became him than the genial dignity with which he bore defeat. He remains secure in the good will and respect of his fellow-countrymen.

WOODROW WILSON.

In November, 1910, WOODROW WILSON was elected Governor of New Jersey. No other Democrat had been elected Governor of the State since 1892, and even in 1910 Mr. Wilson was the only successful candidate on the Democratic State ticket.

In office he displayed such a rare combination of wisdom, firmness, and sanity as fastened upon him the attention of the country. Speedily he stood before the public a national figure, identified with the cause of popular rights and practical reform. It is impossible to enumerate here the salutary and progressive measures which, in consequence of his insistent leadership, were in the brief space of two years enacted by the State Legislature into laws.

At the Democratic National Convention, held at Baltimore in 1912, he was, on the forty-sixth ballot, nominated for the presidency. Governor Thomas R. Marshall of Indiana was nominated for the vice presidency.

Mr. Wilson took an active part in the ensuing campaign, showing himself chivalrous to his opponents and always mindful of the dignity of the office he was seeking. At the election on November 5 there were cast 898,119 votes for Mr. Debs, the Socialist candidate, 3,439,529 for Mr. Taft, 4,168,564 for Mr. Roosevelt, and 6,303,063 for Mr. Wilson. In the electoral college, Mr. Taft received 8 votes from Utah and Vermont, and Mr. Roosevelt 88 votes from California, Michigan, Minnesota, Pennsylvania, South Dakota and Washington. Mr. Wilson carried the forty other States and had 435 electoral votes, a majority over all of 339. This was the largest electoral majority ever given a presidential candidate, yet Mr. Wilson's popular vote was less than that cast for Mr. Bryan in 1896, 1900 and 1908.

Woodrow Wilson is the son of Reverend Joseph R. and Jessie Woodrow Wilson. He was born on December 28, 1856, at Staunton, Virginia. Thus he is the eighth president of the United States whose birthplace was within the limits of the Old Dominion. Graduating from Princeton in 1879 and from the Law School of the University of Virginia in 1882, he practised law a short time at Atlanta, Georgia. Desiring to specialize in history, political science and jurisprudence, he entered Johns Hopkins University, receiving his doctor's degree in 1886 from that institution.

On June 25, 1885, he married Miss Louise Axson of Savannah, Georgia.

Professor of history and political economy for three years at Bryn Mawr College and for two years at Wesleyan University, professor of jurisprudence and politics for twelve years at Princeton, he was from 1902 to 1910 President of Princeton University. During those years he was also a maker of books and not merely a student and teacher of men. All his writings are well known and have to do with history and government. Among them may be mentioned: "Congressional Government, a Study in American Politics," "Division and Reunion," "An Old Master and Other Political Essays," "A History of the American People," and "The State," the latter an authority upon the subject and a classic that can hardly be surpassed.

So the twenty-eighth President of the Republic is a man whose training for political responsibility is unique. He enters upon his duties profoundly versed in the history and principles of politics and disciplined by his practical experience as the epoch-making governor of a great state.

TERRITORIAL GROWTH OF THE
UNITED STATES
Date of ratification of the Constitution shown thus: . . . 1788
Date of admission of State into the Union shown thus: . . . 1818
Title to this territory is based upon

THE STATES OF THE UNION.

[IN THE ORDER OF ADMISSION.]

DELAWARE.

The State of Delaware, popularly called the **"Diamond State"** or the **"Blue Hen State,"** was the **first to ratify the Constitution** of the United States, which it did December 7, 1787. Its situation upon a noble river and bay early attracted the attention of the voyagers. The Dutch and the Swedes made settlements, but had a common enemy in the English. These, in 1664, under Robert Carr, acting for the Duke of York, took possession, and, although Dutch and Swedes continued to live there, held it ever after, with one brief intermission in 1673, when the Dutch repossessed the country. The authorities of the neighboring colonies quarreled over the territory, and in 1682 it passed under the control of Pennsylvania, forming part of that province. In 1703 the people of Delaware established a separate legislature, but continued to keep up a connection with Pennsylvania, having the same governor, until the adoption of the United States Constitution. In 1789 Joshua Clayton was chosen governor, and after that Delaware continued to maintain its own government. Delaware had erected itself into a state and formed a constitution September 20, 1776. It was a slaveholding State, and thus in sympathy with the South, but its position and connection with the North preserved it for the Union. The present constitution was adopted in 1897.

The principal industries are the raising of small fruits, manufactures of leather, foundry and machine shop products, railroad cars, paper and wood pulp, canning and preserving, shipbuilding, flour mill and grist mill products, and iron and steel.

PENNSYLVANIA.

Pennsylvania, the **"Keystone State,"** is the only State which derives its name from its founder, and its founder was the most celebrated Englishman who directly established a colony in America. William Penn was the son of an English admiral, and attracted great attention by joining the then despised and persecuted sect of Friends or Quakers, as they were commonly called. The crown owed his father a large sum of money, and Penn obtained in payment a tract of land in America. The grant was made in 1681, and gave into his hands forty thousand square miles, christened by the king Pennsylvania, or Penn's Woodland. Penn issued an address inviting colonists, and in 1682 came over himself with a company and organized a government. After two separate sojourns he went back to England in 1701, where he died in 1718. He left the government to deputies, while his own family retained the nominal ownership of the land.

The assembly, a body chosen by popular vote, in accordance with the charter, exercised almost entire power; the governor, appointed by Penn, and after his death by his heirs, represented not only the proprietors but the crown. In the opposition of interests a contest was kept up between the assembly and the governor throughout the colonial history. The large Quaker element, which was noncombative, had an influence upon measures relating to defense and to participation in the wars occurring between England and France. The critical condition, at length, of the western part of Pennsylvania brought a temporary conclusion to the quarrels within the colony, and the assembly, under the lead of Benjamin Franklin and urged on by Pitt in England, united with the governor and council and took active measures in defending the frontiers. This resulted in the capture from the French of Fort Duquesne, where Pittsburg now is, and the establishment of peace with the Indians. In the period succeeding the war with the French, Pennsylvania, in common with the other colonies, took measures to resist English encroachments, and the importance of Philadelphia made that city the meeting place of the first Congresses. It was in **Independence Hall** that the Declaration of Independence was made and signed, and that the convention met which drew up the Constitution of the United States. The British obtained possession of Philadelphia, September 26, 1777, and held it until June, 1778. Washington passed the memorable winter of 1777-78 in quarters at Valley Forge.

The commonwealth of Pennsylvania, which was formed in 1776, its constitution being ratified by the people September 28, bought the rights of the proprietary in 1779 for $130,000. It ratified the Federal Constitution December 12, 1787, and thus became one of the United States. In 1794 the western part of the State was disturbed by the **whisky insurrection,** a rebellion against the United States excise laws. In 1812 Harrisburg was made the capital of the State. The period after the Revolution was one of great prosperity, and in the development of the resources of Pennsylvania immense energy was shown. Its coal fields cover an area of 12,774 square miles, and its manufacturing interests, actually growing out of its wealth of coal and iron, are more considerable than those of any other State except New York; its railroads also constitute an important part of its wealth; while in 1859 the discovery of petroleum produced an excitement second only to the discovery of gold in California. The present constitution was adopted in 1873 and amended in 1901.

The University of Pennsylvania, founded in 1740, is the oldest university in the United States. Other notable institutions of learning are the University of Pittsburg, Dickinson, Franklin and Marshall, Allegheny, Lafayette, Haverford, Girard, Swarthmore, and Bryn Mawr (for women) colleges, and Lehigh University.

It was upon the soil of this State that the decisive battle of Gettysburg was fought, July 1, 2, 3, 1863.

NEW JERSEY.

The Dutch were the first to settle within the borders of New Jersey, as early as 1617, but it was not until 1664 that English colonization began. In that year the province was granted by the Duke of York to Lord Berkeley and Sir George Carteret, who proceeded to form a government and send out colonists, giving a name derived from the island of Jersey in the English Channel, over which Sir George had been governor. A proprietary government, somewhat after the character of that of Pennsylvania, continued until 1680, when the two parts of East Jersey and West Jersey came under the direct control of the crown. In 1702, New Jersey became a royal province, with an assembly, and a governor appointed by the crown, who ruled over the united provinces of New Jersey and New York. This union continued until 1738, when it was dissolved, and New Jersey was under a separate government down to the time of the Revolution. The State was the field of important actions during the war. On Christmas night, 1776, **Washington crossed the Delaware,** suddenly fell upon the Hessian troops at Trenton, captured a thousand men, with the loss of four only on his own side, and when the British sought to recover the advantage, he met them at Princeton, defeated them, and drove them almost entirely out of the State. He was encamped for the winter at Morristown, and the British at New Brunswick.

Two days before the Declaration of Independence, the Provincial Congress reported and adopted a constitution for an independent State, which was ratified on the 18th of July, 1776. The State ratified the Federal Constitution December 18, 1787. A new constitution was framed and adopted in 1844, since amended in 1857 and 1897.

The special industries of southern New Jersey are the raising of small fruits, peaches, pears, melons, etc. The leading manufactures of the state are refined copper, silk goods, woolen goods, foundry and machine shop products, leather, and electrical machinery and supplies. There are also important industries devoted to sugar refining, petroleum refining, tobacco products, chemicals, malt liquors, rubber goods, lumber and timber products, jewelry, and pottery. Almost the entire Atlantic coast of the State is occupied by a series of health resorts, largely frequented during the summer months. An important institution of learning is **Princeton University,** at Princeton. **Rutgers College,** founded at New Brunswick in 1766, is the principal seminary of the Reformed Dutch Church in America.

GEORGIA.

Georgia, the **"Empire State of the South,"** was the latest of the original colonies. The first settlement was made under a scheme devised chiefly by its first governor, **James Oglethorpe,** who had been struck by the miserable condition in which many otherwise deserving people in England were placed by the rigorous laws against debtors. An association of trustees was formed with a charter giving them control for twenty-one years over the country between the Savannah and the Altamaha, and at the close of 1732, Oglethorpe, with thirty-five families, sailed for the new land and established his first settlement where Savannah now stands. Oglethorpe went back to England in 1734, but returned the next year with a large number of colonists. With him came **Charles Wesley** as his secretary, and **John Wesley** as missionary to the Indians. **George Whitefield** afterwards came to the colony, which excited great interest in England, on account of its half-charitable character. Neither of the three men made a long stay there. The name of Georgia was given to the colony in honor of George II., who was on the throne when it was founded. Emigration brought many excellent families, including some from Salzburg and Moravia, and some Scotch Highlanders. Oglethorpe continued at the head of the government, and in 1742, with but a small number of men, made a gallant and successful resistance to an attack by the Spaniards, thereby saving the province to the crown. The government of trustees was beset with difficulties, and at the expiration of their charter they turned the colony over to the crown. Though prevented by the governor from taking part in the earliest movements to secure independence, Georgia sent delegates to the second Continental Congress, who signed the Declaration of Independence. During the war which followed Georgia was the scene of important events. At the close of the year 1778 the British, at the opening of the campaign, came by sea from New York and took Savannah; and in September of that year the French, under D'Estaing, and the Americans, under Lincoln, made an unsuccessful siege and assault, in which Count Pulaski, the Polish volunteer, was killed. Savannah continued to be held by the British as a base of operations through most of the war.

Georgia ratified the Federal Constitution January 2, 1788. The State suffered much from difficulties with the **Creek and Cherokee Indians;** and in its determination to drive them out, came into collision with the federal government. The Indians were removed by treaty with the United States in 1838.

The ordinance of secession was passed January 19, 1861. During the Civil War Georgia was the scene of some of the most important battles (as that of Chickamauga, September 19-20, 1863) and of the almost continuous fighting in the campaign between Chattanooga and Atlanta (taken by the Union troops September 2, 1864) which was followed by Sherman's "March to the Sea." Georgia was "readmitted" into the Union June 24, 1868. Her constitution, adopted in 1777, has been succeeded by four other constitutions, the last of which, that of 1877, has been amended seven times.

The principal crops of Georgia are rice, cotton, Indian corn, and wheat; its manufactures include cotton goods, lumber and timber products, cottonseed oil and cake, and fertilizers.

CONNECTICUT.

This colony took its name from its principal river, called by the Indians Connecticut. It was settled by persons from the three towns of Newtown (Cambridge), Dorchester, and Watertown, in Massachusetts. Feeling straitened for room, and hearing of the excellent meadows on the great river to the west, they resolved to remove to its banks. This removal was effected in the years 1634 and 1635; and the three towns of Hartford, Windsor, and Wethersfield were established. They combined to form one government, and the first court was held in Hartford, April 1, 1636. **This colony was the first in America which had a written constitution.** John Haynes was elected governor. Very early the colonists were engaged in a fierce conflict with the Pequot Indians, whose power they entirely destroyed.

In 1635 John Winthrop, son of Governor Winthrop of Massachusetts, came from England with a commission from Lord Say and Sele, Lord Brook, and others, to whom the original patent of Connecticut had been granted, and built a fort at the mouth of the Connecticut River, at Saybrook. He was elected governor of the colony in 1657, which office he filled for nearly twenty years.

In 1638 a new and independent settlement was made at New Haven, on the Sound, thirty miles west of Saybrook, by a company lately arrived from England, small in number but distinguished by wealth and the high character of their leaders, the Rev. John Davenport and Governor Eaton.

In 1662 Governor Winthrop of Connecticut visited England, and, without the knowledge of New Haven, obtained from Charles II. a charter by which all the territory from Narragansett Bay to the Pacific was given to the Connecticut colony. New Haven resisted at first, but finally was absorbed; the original division of the territory left its traces long after in the double capital, Hartford and New Haven. By a shrewd course the colony avoided a conflict with the crown, and retained its charter until the Revolution, enjoying a freedom from difficulties and a prosperity beyond that of the other colonies.

The charter held by the colony was so ample and satisfactory in its provisions that it remained the constitution of the State when the colonial government ceased, and the independent State government was assumed; it was not, indeed, until 1818 that the present constitution was framed. The governor of Connecticut during the war for independence, Jonathan Trumbull, was one of the most efficient of the State governors, and the term **Brother Jonathan** as a national sobriquet was derived from the familiar use of his Christian name. Connecticut is sometimes jocularly known as the "**Land of Steady Habits**" and the "**Wooden Nutmeg State.**" It ratified the Constitution of the United States January 9, 1788.

The war of 1812, together with the events preceding it, bore very heavily on the New England States, and a convention of delegates met at Hartford in December, 1814, to consult upon measures for the relief of that section. The **Hartford Convention,** composed of Federalists, was accused of disloyal designs at the time, and the secrecy of its sessions heightened the popular suspicion of its intentions. Subsequent disclosures of its conferences have modified the charge of disloyalty, and the conclusion of the war shortly after made the action of the convention unimportant.

Connecticut, by its charter, claimed ownership in a tract of land sixty miles in breadth, extending to the Pacific Ocean; but, in common with other States it ceded this territory to the Union, retaining, however, certain lands in New York and Ohio. The sale of these lands brought in a large sum of money, which was appropriated to the maintenance of common schools. The important seat of learning, **Yale University,** with its various academic, scientific, and professional schools, is at New Haven. It was founded at Saybrook in 1701, but was removed to New Haven in 1716. In Connecticut are also Trinity College and Wesleyan University.

The State, while having good lands, especially in the valley of the Connecticut River, is mainly a manufacturing State. The chief manufactures include brass and bronze products, foundry and machine shop products, cotton goods, silk goods, firearms and ammunition, woolen goods, silverware, corsets, automobiles, cutlery, tools, and hats. Life, fire, and accident insurance constitute an important part of the business of Connecticut, while in proportion to extent and population its banking business has been greater than that of almost any other State.

MASSACHUSETTS.

The first colony within the boundaries of the present State of Massachusetts, the "**Old Bay State,**" was that made by the Pilgrims, who formed the **Plymouth Colony** in 1620. Ten years later a settlement was made at Salem, and shortly after the important one about Boston Harbor. These last took the name of the **Massachusetts Bay Colony,** the bay bearing the title of a tribe of Indians living near it. The colony was the most considerable in numbers, wealth and character of any yet sent out from England. It consisted of about a thousand souls, and contained men of education and social position who were constrained to leave England because they were uneasy at the tendency of affairs in church and state, and desired to carry out, under the favoring circumstances of a new country, views which they held regarding the proper life of a Christian people. The company which sent them out was a trading company, and, like other companies, had obtained a charter from the king incorporating it. These companies had each a governor and officers who ruled the affairs of the enterprise in London; but the leaders of this new movement took a further step, and transported the whole company from England to America, carrying the charter with them; the governor now resided in Boston, and all the affairs were transacted on this side of the Atlantic.

The stability which the colony obtained at once attracted to it emigrants. There was a great body of disaffected people in England, and within ten years as many as **twenty thousand Puritans** joined this enterprise. Towns and villages sprang up, and the people made also distant migrations to the more fertile valley of the Connecticut. The government which grew out of the charter provisions was that of a governor and general court, and to this general court two delegates from every plantation were chosen; there was a representative government in full operation, elected by the people and responsible only to them. The king of England was recognized only remotely, but it was declared that the laws passed should not conflict with the laws of England. A college, the first in the colonies, was founded at Cambridge in 1636, named **Harvard College,** from its first benefactor; schools were established, and every effort was made to build up a self-governing state, sufficient to itself.

The leaders of the movement were closely identified with the Puritan party in England; and the king, perceiving how strong the Massachusetts Bay Colony was growing, sought to recover the charter; but grave troubles in England intervened, and it was not until after Cromwell's death, when Charles II. was on the throne, that the **charter was finally taken away,** and the colony, with other New England colonies, erected into a province, under a royal governor appointed by the crown. The long period of liberty, and the constant practice of self-government, had given confidence and resolution to the people, so that when the English government, eager only to increase its revenues from the industry of the growing colonies, took measures to lay taxes upon them, as if they were not parts of the kingdom, and by a rigorous system of laws to make all their business pay tribute to English merchants, the Massachusetts people were roused to opposition.

Here were taken some of the first steps in the separation of the colonies from Great Britain. The resistance to the **tax on tea** led to the destruction of a cargo, and, in punishment, the port of Boston was closed. The Concord and Lexington fight, the battle of Bunker Hill, and the siege of Boston followed in quick succession; but after the English army withdrew from Boston, there were no further military movements in Massachusetts.

Plymouth colony was merged in the larger colony of Massachusetts Bay when the charter of the latter was withdrawn, and had no separate existence afterwards; at the same time, also, the district of Maine passed under the control of Massachuetts. A State government was formed in 1780, and the first governor was John Hancock, who had been president of the Continental Congress. The State constitution also was adopted in 1780 and, though several times amended, is the oldest still active written constitution in the world.

An insurrection broke out in the western part of the State in 1786–87, known as **Shays's Rebellion,** from its leader, who headed an armed resistance to the collection of taxes which, in the impoverished condition of the State, bore heavily on the people. The Federal Constitution was ratified February 6, 1788. In 1820 Maine was set off from Massachusetts as a separate State.

Massachusetts, in the value of its manufactures, is the fourth State in the Union. In each of its three leading industries, boots and shoes, cotton goods, and woolen goods, it holds first place. The fisheries, especially the codfisheries, centering about Gloucester and Boston, have long been a considerable, and were once a dominant, industry. The State is rich in institutions of learning — Harvard, Williams, Amherst, Tufts, Holy Cross, Boston University, Massachusetts Institute of Technology, Massachusetts Agricultural College, etc., and the great women's colleges, Mount Holyoke, Smith, Wellesley, Radcliffe, Simmons, — in learned societies, libraries and museums, and does much in normal and public school education.

MARYLAND.

Like Pennsylvania, Maryland owed its first settlement to the interest especially of one man. **George Calvert, Lord Baltimore,** was an English statesman who, in the turn of politics, was obliged to withdraw from public life. He had been interested, like many others of his class, in colonization schemes, and he now turned his attention to building up a strong settlement in America. He held lands in Newfoundland, but experience showed that country to be less fit for his purposes; he went to Virginia, with the intention, apparently, of getting control there, but, failing in that, he secured a charter from the king granting to him and his heirs all the country included in the present state of Maryland, — so named from the queen, Henrietta Maria, — and part of what is now Delaware. He died before the charter could be legally executed, but his son Cecil received it. The Calverts were Roman Catholics, who then, as well as the Puritans, were under the ban of the English government. While the new colony was formed ostensibly as a trading company under the government of one family, which held authority from the crown, there was plainly an intention to make it an **asylum for the fellow believers** of Calvert. Care was taken to incorporate in the charter provisions such clauses as would make this toleration of the Roman Catholics possible.

The first party reached the mouth of the Potomac in March, 1634, under the lead of Leonard Calvert, a brother of Lord Baltimore, and consisted mainly of Roman Catholic gentlemen with their families and servants. Their early difficulties were not with the savages, but with Captain William Claiborne, who, with a party of men from Virginia, had made the first settlement in Maryland, on Kent Island in Chesapeake Bay, in 1631. Refusing to recognize the authority of Calvert, Claiborne and his most active adherents were expelled. The presence in the colony, moreover, of a diversity of religious belief led to conflicts which were not always averted by the toleration acts which were passed. The Calvert family continued to hold proprietorship, except for a period of twenty-five years from 1691 to 1716, when the colony existed as a royal province. The proprietary government was more wisely carried on than in Pennsylvania, the ruling family having more direct interest in the affairs of the people, and identifying itself more completely by residence in the country.

There were long disputes as to the boundaries of Maryland. In 1668 the boundary with Virginia on the eastern shore was settled, and that on the side of Delaware and Pennsylvania in 1760. The Pennsylvania boundary has always been known as **Mason and Dixon's** line, from the names of the surveyors. When the war for independence came, some even of the proprietary family were on the patriotic side; a popular government succeeded to the proprietary without difficulty, and a constitution was adopted in November, 1776, since superseded by the constitutions of 1851, 1864 and 1867. Maryland ratified the Federal Constitution April 28, 1788. She suffered severely in the war of 1812, and it was in connection with the defense of Fort McHenry at Baltimore that the national song of "**The Star-Spangled Banner**" was written. During the war for the Union Maryland was divided in sentiment, and many of its sons went privately into the Southern army, but it contributed, also, largely to the Union force, and it was upon the soil of Maryland that the important battle of **Antietam** was fought, September 17, 1862. The manufactures of Maryland of chief importance are the refining of molasses and sugar. A great business is done, also, in the oyster fisheries, and, from the position of Baltimore, there is a growing commerce which is yearly rendering that port one of significant value to the coast. Baltimore is the seat of Johns Hopkins University and of the Woman's College of Baltimore.

SOUTH CAROLINA.

The coast of South Carolina, the "**Palmetto State,**" was the scene of fruitless French attempts at colonization in the sixteenth century; but it was not until 1670 that an English settlement was made. Charles II. had given the territory embraced in both the Carolinas (which took their name from him) to the Earl of Clarendon, the Duke of Albemarle, and others. The nobleman who took most interest in the country was the Earl of Shaftesbury, and he received the aid of the philosopher, John Locke, who drew up an elaborate but wholly impracticable scheme of government for the proposed colony. The actual colonization began under William Sayle, at the junction of the Ashley and Cooper rivers, where a settlement was formed which grew into Charleston. The first comers were of great diversity of character and position, and difficulties sprang up in the adjustment of financial affairs and religious controversies. The Huguenots formed an important element in the community. They settled chiefly in Craven County, but were looked upon with jealousy by the English. The nearness of the Spanish possessions gave occasion to piratical excursions, and the pirates, using the harbors and quartering themselves on the settlements, added greatly to the irregular life of the colony. Yet, in spite of all disadvantages, the colony grew in wealth and importance. In 1694 the culture of rice was begun, the seed having been brought from the island of Madagascar.

As in other colonies, the relations of the mother country with other nations in Europe were reproduced on a smaller scale here. The governor of the colony, James Moore, led an unsuccessful expedition against St. Augustine in 1702, when England and Spain were at war. He was more fortunate afterward in his movement against the Indian allies of Spain. A general Indian war broke out in 1715, which was attended by great loss of life and property, and since the burden of defense was thrown upon the people, they rebelled against the proprietors, and in 1719 renounced allegiance and chose Moore for governor. The case was carried to the English government, which finally bought the proprietors' rights, and constituted the country a royal province, dividing it into two distinct districts, North and South Carolina. From that time, as in other colonies, the governor was appointed by the crown, and the assembly was chosen by the people.

A State constitution was adopted March 26, 1776, since succeeded by five others. The State suffered severely in the struggle for independence. Upon its soil the important battles were fought of Fort Moultrie, Charleston, Kings Mountain, Cowpens, Eutaw Springs, and Camden. It ratified the Federal

Constitution May 23, 1788. The powerful leadership of **John C. Calhoun** gave the State great prominence. In 1832, immediately after the second election of Andrew Jackson, there was a strong feeling in South Carolina against the existing tariff laws, which were held to be injurious and unjust. At a convention, held November 19, an ordinance of nullification was passed, pronouncing the tariff null and void and forbidding the citizens of the State to pay duties on imports under this tariff after the date of February 1, 1833. This ordinance was sustained by the governor, but the prompt action of President Jackson caused the nullification leaders to recede from their position. Subsequently the tariff was revised, and a compromise effected. Seceding in 1860, the first gun in the Civil War was fired by South Carolina troops in the attack upon Fort Sumter on April 12, 1861. South Carolina was " readmitted " to the Union in June, 1868. The principal crops of South Carolina are rice and cotton. The manufacture of cotton goods is an important industry.

NEW HAMPSHIRE.

As early as 1623 two feeble settlements were started at Dover and Portsmouth, in what is now New Hampshire, and was then an indefinite tract of country granted the year before to Captain John Mason and Sir Ferdinando Gorges. A few years later settlements were made also at Exeter and Hampton. The four points were independent of each other, and suffered so much from their isolated position and conflicting relations that they voluntarily placed themselves, in 1641, under the jurisdiction of Massachusetts, so continuing until 1680. In that year the old Mason claim was revived, which led, not to the establishment of the claim, but to the separation of the settlements from Massachusetts, and their erection into a province, with a governor appointed by the crown and an assembly chosen by the people. The province was misgoverned, and sought the earliest opportunity, which did not come until 1690, to be reunited with Massachusetts. New Hampshire after this was for years sometimes united with Massachusetts, sometimes separated from it, according to the intrigues of the governing authorities there or in England; but the settlers were closely connected by many ties with the Massachusetts people, and the difficulties which they encountered, both from the Indians and from the rapacious officers of the crown, gave them a sturdy and resolute character. In 1741 the political quarrels closed with the firm establishment of the colony as a royal province, and it so remained until the Revolution. It suffered terribly in the French and Indian wars, in which it took an active part, and was prepared, when the Revolution came, to send hardy soldiers to the field, among whom was General Stark, who commanded at the decisive Battle of Bennington. New Hampshire had no constitution until June 2, 1784, although the convention to draft one began its sessions as early as June 12, 1781. As the ninth State to ratify the Constitution, which it did on June 21, 1788, its action rendered the Union an assured fact. The forests of New Hampshire furnish much lumber, but the largest manufactories are those for boots and shoes, and cotton and woolen goods. The State is often called the **" Granite State."** Dartmouth College, at Hanover, is its chief seat of learning.

VIRGINIA.

The name of Virginia is derived from the title which her subjects sometimes gave to Elizabeth, of the **Virgin Queen of England,** and the earliest history of the colony is singularly associated with the names of some of the greatest Englishmen of the Elizabethan age. Alluded to in early documents as " the colony and dominion of Virginia," it is often called **" The Old Dominion."** Sir Walter Raleigh made large but ill-fated attempts to establish a colony on the Virginia coast; it was he who gave the name to the country; he also popularized in England the great Virginia staple, tobacco. Sir Francis Drake also, the great English sea captain, played a part there, and there is even a remote connection of Virginia with Shakespeare, in that the play of *The Tempest* is confidently declared to have been suggested by the narrative of the Virginian secretary, William Strachey, in which an account of his shipwreck is given. The hopes of the early settlers were for gold and sudden wealth; they met disaster and dreary disappointment. They were kept together and their enterprise saved from absolute failure chiefly by the energy and versatility of **Captain John Smith,** whose fame has suffered most from his own extravagant reports. On the 13th of May, 1607, the settlers landed at Jamestown and began the **first permanent English colony in North America.** There was a struggle for existence during the first ten years of the colony's life, which was rendered more precarious by the unfortunate composition of the population, in which there was but little material of a working sort.

As in other instances, the company which organized the first Virginia settlements was a mercantile company, but it also afforded an arena for political discussions, and was used by statesmen of the time for putting into practice their views on government. Hence, when difficulties arose in Virginia by reason of the despotic acts of the governor, a new organization was effected and a representative government established. In 1619 the **first representative assembly in America** met at Jamestown. The new measures and the greater stability of the government stimulated colonization, and within a year the number of inhabitants had increased from six hundred to four thousand. There was a vigorous element of industrious men with families, but there was also a disorderly element from London streets, sent over in accordance with the mistaken policy of the time, and in 1619 a Dutch captain brought over a shipload of slaves.

The charter of the London Company was dissolved in 1624, after the Virginia colony had been strongly established and fortified with liberal institutions and laws. After that time no company stood between the colony and the king. He, it is true, appointed royal governors, but the power was chiefly in the hands of the House of Burgesses, and in the exercise of this power a spirit of freedom was encouraged, and a capacity for self-government developed which qualified the colony for the leading part taken by it in the war for independence. The large area of the colony, its productive soil, and its practical monopoly of what came to be a great staple of commerce, conspired to give wealth and importance to Virginia. The mode of life also, by which large estates were held by families which had early acquired possession, tended to give play to powers of administration, and to develop the character and ability of individuals, so that when the struggle came for independence, Virginia furnished a large number of the most conspicuous men; Washington, Jefferson, Madison, Patrick Henry, were all Virginians.

On June 2, 1776, a State constitution was adopted. It was at Yorktown that the last scene of the war for independence was enacted, and after leading the way in calling the convention which framed the United State Constitution, Virginia ratified that instrument June 26, 1788. The State continued to maintain an ascendancy in the Union for a generation at least, and seven of the Presidents of the United States, with an aggregate term of more than thirty-seven years, were natives of the State, so that Virginia acquired the name of **Mother of Presidents.**

When the civil war broke out, the accession of Virginia to the Southern Confederacy was a matter of the greatest consequence. The people were divided in their views. Only after long discussion and after the attack upon Fort Sumter was the ordinance of secession passed. This ordinance, being submitted to popular vote, was approved by a majority of about 94,000. Richmond became the capital of the Confederacy. General Robert E. Lee, a Virginian to whom President Lincoln had offered the command of the Federal troops, was made commander in chief of the Confederate armies. Upon the soil of the State the chief operations of the war were carried on, from the battle of Bull Run to the final battle before Richmond and the surrender of General Lee at Appomattox Court House. Its political rights in the Union were restored January 26, 1870.

Virginia is primarily an agricultural state. Tobacco has from the beginning been a leading crop, and the manufactures of tobacco, next to lumber products, constitute the leading industry. Flour and grist mill products are also of much importance.

Virginia has always paid great attention to the higher education. Among her leading institutions of learning are the College of William and Mary, founded as a college in 1693 and as a school going back to 1617, Washington and Lee University, founded in 1749, and the University of Virginia, founded by Jefferson in 1825. Phi Beta Kappa, the " scholarship society " in American colleges, was founded at William and Mary in 1776.

NEW YORK.

The settlements along the Atlantic coast which afterward became the thirteen colonies were all founded by Englishmen, with the exception of New York, and here a rival power obtained a footing which at one time appeared formidable. The Dutch power, however, was essentially a commercial one, while the English colonies from the beginning had large political and religious elements. In the earnest life of Europe, moreover, the Dutch offered small contribution after they had won their own independence, and as the people shrank in political significance their colony in the New World waned in power. Henry Hudson, an Englishman, sailing for a commercial company in Holland in 1609, called attention to the river which has since borne his name, and the Dutch soon perceived the importance of the position of Manhattan Island. Small posts were established as early as 1614 on Manhattan and at Fort Orange, afterward known as Albany, but settlements in these places were not begun with any seriousness until the establishment of the great West India Company, which sent out in 1623 a number of Walloons; and the several points which the first traders had chosen were made the centers of activity. The company at home, however, was essentially a trading company, and the business pressed upon the settlers was that of traffic with the Indians.

The establishment of flourishing colonies manifestly insured substantial advantages in trade. To stimulate emigration the company bestowed landed rights, attended with special privileges, on whomever would send out a colony of at least fifty persons. This system produced the patroons, or great landed proprietors, the prosperity of whom in the end affected injuriously the prosperity of the company.

Meanwhile the Dutch settlements extended into Connecticut and Rhode Island on the north and east, and to the Delaware River on the south, but these outposts brought on conflict with the English power which hemmed them in. The English, indeed, on the ground of Cabot's discovery, claimed the whole territory occupied by the Dutch, and their representatives in New England especially had no hesitation in asserting their own claims. The matter was really decided in Europe. The Dutch power gave way before the English; the settlement at New Amsterdam could not be stronger than its source of power at home, and in 1664 the English took possession of the colony, giving the name of New York to New Amsterdam, in honor of the Duke of York, who held a patent. Fort Orange was called Albany, from the Duke of Albany. Once afterward, ten years later, when the Dutch and English were again at war, a Dutch fleet restored the Dutch authority for a year, but after that the colony remained under English rule until the Revolution. The large infusion of Dutch life, however, continued to affect manners and customs and social conditions in general.

In 1683 a representative assembly was created by permission of the Duke of York. On his accession to the throne as James II. he withdrew the right, and the arbitrary government which followed was overthrown when the revolution of 1688–89 occurred, to be followed for a time by one quite as arbitrary, under the lead of Jacob Leisler, who had effected the overthrow. Leisler was himself afterward executed for treason under circumstances which long embittered the politics of the colony. A representative government followed, but the power of the governor was less definitely restrained than in some of the other colonies, and in the succession of governors the individual character of the person holding office had much to do with the harmony or disorder of the province.

July 9, 1776, the Provincial Congress which had been previously organized took the title of The Representatives of the State of New York. The first State constitution was adopted April 20, 1777. New York was the scene of important military operations during the war for independence, and for some time the town of New York was occupied by the British army. It had already given signs of its growing influence among the States, when it ratified the Constitution July 26, 1788, and its history after that date was one of steadily increasing power in politics, commerce, and finance, especially through the development of its great city of New York. The completion of the Champlain canal in 1823, and of the Erie canal in 1825, stimulated the internal commerce of the State.

New York deserves the name by which it is often called, **" The Empire State."** Though in area it is among one of the smaller States, twenty-six States surpassing it in extent of territory, yet in population, wealth, commerce, manufacturing interests and products, it is the foremost of the Union. Its agricultural interests are also large.

Its educational system is well regulated and comprehensive, all higher education in general being under the supervision of the University of the State of New York, an administrative but not teaching institution. The academic, technical, and professional schools are numerous. Noteworthy among these institutions are Columbia, Colgate, New York (City), Rochester, St. Lawrence, Cornell, and Syracuse Universities, Union, Hamilton, Hobart, City of New York, Vassar, and Barnard Colleges (the two latter for women), and Pratt Institute.

The population of the Empire State is now three times that of the thirteen colonies at the outbreak of the Revolution, or nearly as large as that of the whole country in 1820. More than half of this population resides in the city of New York, the second city of the world in populousness, and the financial, industrial, and philanthropic center of the United States.

NORTH CAROLINA.

The colony of North Carolina, popularly called the **"Old North State,"** was not formally given that name until the division of the Carolinas in 1729 into North and South, but the territory included within the boundaries of North Carolina had been made the field for many separate attempts at colonization. As early as 1584 a company sent out by Raleigh made an unsuccessful effort to settle on Roanoke Island, and an early grant by Charles I. again led to some feeble movements in the same direction. The country, however, received its first definite settlement from Virginia. The power of a colony to plant seeds of other colonies is an important indication of its inherent strength; and both Virginia and Massachusetts had this sign of vitality. Between 1640 and 1650 a number of families, encouraged by the Virginia authorities, who paid slight regard to royal grants, entered the country and occupied it north of Albemarle Sound. A few New Englanders undertook to settle in the southeastern portion, but became discouraged and abandoned the enterprise; that part of the country was afterwards occupied by settlers from Barbados.

In 1663, however, the region was again liberally given away by Charles II., and the new proprietors made an effort to colonize the country, at the same time treating with consideration those already in occupancy. While the colony was growing in an irregular way, the noblemen who owned it were inflamed with the ambition to create of it a mighty empire. They obtained indefinite grants from the king and a high-sounding constitution from the philosopher Locke. The constitution was soon abandoned, the government was inefficient, and a revolt broke out in 1677, headed by John Culpeper. A succession of revolts against unpopular governors resulted in the creation of an assembly to represent the people, a governor being appointed to represent the proprietors. In 1729 the crown bought all the proprietorial rights and the colony became a royal province.

The few early inhabitants were scattered. In the first part of the eighteenth century there was a considerable immigration of Scotch and Scotch-Irish and of French and German Protestants. This was a sturdy element, sometimes careless but free and independent in its expression. It is possible that what are known as the **Mecklenburg resolutions** of 1775 were the first formal declaration of independence in America.

North Carolina formed a State government in December, 1776, and ratified the Constitution of the United States on November 21, 1789, although at first, a year before, it had refused to do so. The question of secession was vigorously discussed in North Carolina, there being a strong Union element; but a small majority finally carried the State into the Confederacy. Wilmington was, during the civil war, the chief port of blockade runners. It was at Greensborough that General Johnston finally surrendered to General Sherman. The State was restored to the Union in July, 1868. Cotton and tobacco are the leading crops, and manufactures of tobacco and cotton goods the leading industries. There is a large business in lumber. In North Carolina is Mitchell's Peak, its top 6,711 feet above sea level, the loftiest elevation in the United States east of the Rocky Mountains. The University of North Carolina was founded in 1789.

RHODE ISLAND.

Rhode Island, the smallest of all the States in the Union, often called **"Little Rhody,"** was the last of the original thirteen to ratify the Constitution, and such independence of action illustrates the individuality which has marked its career from the beginning. The country about Narragansett Bay afforded a refuge to Roger Williams, a dissenter from the prevailing belief in the Massachusetts Bay Colony, and too positive in his convictions to be suffered to live in that colony. He formed, with a little company, in 1636, a settlement, to which he gave the name Providence; other settlements were formed by disaffected New Englanders, and the country became a resort for those who were powerless to resist the strong governments under which they lived, and too independent to remain in silence. In 1643 Roger Williams went to England to secure for these scattered settlements a patent from Parliament, with which he returned the next year. Under this a government was framed which secured large individual liberty. The Massachusetts government, however, jealous of the existence of such an organization, which interposed an authority between it and recusant colonists, looked with unfriendly eyes upon Rhode Island, and made an attempt to encroach upon the territory claimed by the latter. Williams again sought the aid of the home government, and returned in 1654 with a confirmation of the patent, which remained in force till it was supplanted in 1663 by a royal charter, constituting the Rhode Island and Providence Plantations. Rhode Island suffered much from **King Philip's war,** but maintained a vigorous and energetic life with considerable commercial prosperity up to the time of the Revolution. Even after that war New York was sometimes described as "near Newport." The characteristics of the early settlers were constantly exhibited in personal independence and self-reliance.

During the Revolution Rhode Island was one of the most active of the colonies in privateering. It ratified the Constitution May 29, 1790, but the old charter served as the State constitution until 1843, when a new constitution went into effect. Rhode Island is preëminently a manufacturing state, being in spite of its small size sixteenth among the States in the value of its manufactured products. The leading industries include woolen and cotton goods, jewelry, and foundry and machine shop products. Rhode Island is the most densely populated of all the States, having 508 inhabitants to the square mile according to census of 1910. Brown University, at Providence, was founded in 1764.

VERMONT.

The thirteen states which constituted at first the United States had all been colonies of Great Britain. Vermont, the first to be added to the new Union, had had no distinct political existence; its territory was claimed in part by New Hampshire, in part by New York, while the inhabitants, known familiarly as the **Green Mountain Boys,** had by their committees and conventions practically assumed many of the functions of a State, and were entirely unwilling to acknowledge the jurisdiction of either claimant. In 1777 they declared themselves an independent State, and elected a governor and other officers. For fourteen years Vermont held a somewhat anomalous position. It was entirely in harmony with the rest of the country in opposing British sovereignty; it engaged in the war for independence with zeal and resolution; but it was quite as bitterly opposed to the recognition of any claim which New York or New Hampshire might set up over its territory. The controversy which Vermont had with its neighbors led the English government to make attempts to induce it to renew its allegiance to the crown, with a promise that it should be an independent province. Negotiations, which are somewhat obscure, passed between the British authorities and the Vermont leaders, but the result indicates that these latter were bent upon a connection with the Union. The independence of Vermont was finally conceded, and, after an adjustment of the boundary difficulties, it was admitted to the Union, March 4, 1791.

The occupation of the people is mainly agricultural, special attention being paid to dairy products and grazing. The population has increased little during the last sixty years. This is partly due to emigration to the West, where many sons of Vermont have become eminent. Vermont is the leading state in the production of marble. The University of Vermont, Middlebury College, and Norwich University are its leading educational institutions.

KENTUCKY.

The early history of Kentucky has a romantic interest from the personal adventures of the pioneer **Daniel Boone,** a famous Virginia hunter, who set out in 1769 to explore the region with five companions. So promising was its appearance that he returned to his home and led a party in 1773, which undertook to settle on the Cumberland River, but difficulties with the Indians drove them back. He was resolute, however, and continued his efforts at settlements, acting also for a North Carolina company in the purchase of lands from the Indians. The first permanent settlements were made at the beginning of the Revolutionary war, and their existence was constantly imperiled by Indian attacks. Other famous names in the annals of Kentucky are James Harrod and Major George Rogers Clark; the latter was a surveyor as well as a soldier, and by his efforts the region was in 1776 erected into a county of Virginia, the name of Kentucky being given to it, an Indian word signifying **"dark and bloody ground."** The western emigration, which was so active after the close of the war for independence, carried into the country a large number of families from Virginia and North Carolina, who were especially attracted by the richness of its pasture lands, whence is derived its popular name of the **"Blue Grass State."** In the disorder which existed before the final establishment of the United States, the people, who numbered in 1784 thirty thousand, began to demand an independent government. They were still seeking this when the Constitution of the United States was framed and adopted. Kentucky was made a Territory in 1790, and on June 1, 1792, was admitted into the Union as a State. From its position Kentucky tried to maintain a neutral relation during the civil war, but finally gave in its adhesion to the Union. It suffered from constant occupation of its territory by both armies. Its soil is rich and increasingly cultivated. Its fine pasture lands have been largely devoted to the business of stock breeding, which has been carried to an important extent. The principal industries include distilled liquors, flour, lumber products, and tobacco manufactures.

TENNESSEE.

As Kentucky was nominally a part of Virginia, so Tennessee, the **"Volunteer State,"** was a part of North Carolina. In 1777 the legislature of that State organized the territory now contained in Tennessee into the county of Washington. In 1778 a number of families, retiring from the seaboard conflict when the British had military supremacy, settled on the Cumberland River near the site of Nashville, and emigration continued until, like their neighbors in Kentucky, the Tennessee people proposed to establish a separate government under the title of the **State of Frankland.** The adoption of the Constitution of the United States put an end to these anomalous political movements, and in 1790 North Carolina ceded the territory to the United States, when it was organized as the Southwest Territory, under the provision which now regulated the political growth of all the common land held by the Union. This Territory applied for admission to the Union, under the name of Tennessee, taken from the title of its principal river, signifying in the Indian tongue "the river of the big bend." It was admitted June 1, 1796.

An ordinance of secession was passed May 6, 1861, but the people of East Tennessee remained loyal and played an important part in the operations of the war in that section. The severe battles of **Shiloh, Chattanooga, Island No. 10,** and **Stone River,** were fought in Tennessee; and the whole State was almost incessantly the scene of conflicts. This State, which maintained for part of the period of the war two governments, was one of the first to be received back into the Union. It ratified the various amendments, in accordance with the terms imposed by Congress, and was restored to full participation in July, 1866. Tennessee is an important tobacco-producing State, and has a growing manufacturing interest, occupied mainly with lumber products and flour. Vanderbilt University, at Nashville, is well known.

OHIO.

In 1783 the several States claiming possession of the territory lying to the northwest of the Ohio River — "the river of blood," as the Indian name signifies — surrendered their title to the United States. This territory, known as the Northwest Territory, comprised the section since divided into the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin. By the **Ordinance of 1787,** enacted by the Continental Congress which preceded the first Congress of the United States, slavery was prohibited in this Territory; the basis of the ordinance was the constitution and laws of Massachusetts, since the movement to occupy the country was largely the result of the formation of the **Massachusetts Land Company,** which bought millions of acres here, and proposed to send out emigrants. The same ordinance provided for the appointment of a governor by Congress and the election of an assembly by the people (repeating thus the old colonial condition), for the establishment of courts, and for the encouragement of education, and finally that not fewer than three nor more than five States should be carved out of the domain, and that a population of not less than sixty thousand should be requisite before one of the divisions of the Territory could apply for admission as a State.

Ohio was the first to meet the requirements. The movement into its fertile fields began in 1787-88, when a band of forty-seven persons under General Rufus Putnam came from Massachusetts, tarried at Pittsburg long enough to build a boat which they named the *Mayflower*, and, after a five days' voyage, settled upon the banks of the Ohio where the Muskingum enters that river, and named their settlement Marietta. About the same time John Cleves Symmes obtained a grant of one million acres, bounded south by the Ohio and west by the Miami, and two settlements were made, at North Bend and at Cincinnati. Meanwhile, in the unsettled relations of England and the United States, the Indians of the country were encouraged to molest the emigrants, whose progress westward constantly brought them into conflict with the natives. Between 1783 and 1790 fifteen hundred persons were killed or captured by the Indians, and twenty thousand horses stolen. In 1790 the hostilities took the form of open warfare, and General St. Clair, who was governor of the Territory, met the Indians in battle in November, 1791, and was defeated with great loss. He was followed by General Anthony Wayne, who crushed the

savages at the Battle of Falling Timbers in 1794 and ended the Indian reign of terror.

Immigration now increased rapidly. A large sale of land was made to a Connecticut company out of a district known as **Connecticut, or Western, Reserve,** because it had been reserved by Connecticut when she surrendered her claim to the United States. Moses Cleveland was the surveyor, and his name was given to the chief settlement of that district in 1796. The Northwest Territory was divided in 1800, the western part taking the name of the Indiana Territory, and on February 19, 1803, Ohio was admitted a State of the Union. It is familiarly known as the **" Buckeye State."** The State was the scene of some notable military events during the war of 1812, especially the Battle of Lake Erie, when Commodore O. H. Perry defeated the British squadron at Put-in-Bay, September 10, 1813. During the war for the Union it was one of the Northern States which occasionally suffered from raids.

The history of Ohio shows a steady advance in every direction. It is one of the leading agricultural and grazing States. Its manufactures include iron and steel, foundry and machine shop products, slaughtering and meat packing, and flour. Ohio leads all the States in pottery, terra cotta, and fire clay products. Coal and petroleum deposits are a great source of wealth. Of its numerous educational institutions may be mentioned Western Reserve, Cincinnati, Ohio State, and Ohio Wesleyan Universities, and Kenyon, Marietta, and Oberlin Colleges. Of the last ten presidents of the United States, six were born in Ohio.

LOUISIANA.

The name Louisiana, after Louis XIV., king of France, was given by the French discoverer La Salle, in 1682, to a vast, unexplored country, stretching from the Alleghenies to the Rocky Mountains, from the Rio Grande and the Gulf to the farthest springs of the Missouri. At the close of the French and Indian war, in 1763, France ceded to the British crown all that portion of the territory east of the Mississippi and north of the Iberville, and this became a part of the United States by virtue of their independence of Great Britain. At the same time France transferred to Spain all the western portion. In 1800 Spain ceded this country back to France, and in 1803 Jefferson, alarmed at the prospect of a powerful neighbor on the frontier, and dimly conscious of the future importance of the territory to the nation, bought the territory for the United States for the sum of fifteen million dollars. Shortly afterward the portion now occupied by the State of Louisiana was organized as the Territory of Orleans. It contained a considerable population, chiefly French, and the important town of New Orleans. On April 30, 1812, Louisiana was received as a State. It has since been often called the **" Pelican State "** or the **" Creole State."**

It was at New Orleans that the last battle of the war of 1812 was fought, January 8, 1815, when the Americans under Jackson repulsed the British. The State adopted an ordinance of secession December 23, 1860; but there were both a strong Union sentiment and a large class indifferent to political considerations. New Orleans was captured by the Union forces under General Butler in April, 1862, and became the headquarters of important military and naval operations. Louisiana suffered from a conflict of authorities after the war and even after its restoration to the Union in 1868, and political quarrels so late as 1876 continued to keep the State in confusion. Its position, commanding the outlet of the Mississippi, renders it a great commercial State, and its fertile soil makes it rich in the production of sugar, rice, and cotton. Engineering works at the mouth of the Mississippi have greatly developed the navigable qualities of the river. The leading industries include sugar refining and lumber and timber products. The chief educational institution of the State is Tulane University.

INDIANA.

The Territory of Indiana, which was set off from the Northwest Territory in 1800, included all of that district except Ohio. From that Territory the separate Territories of Michigan and Illinois were set off in 1805 and 1809. The Secretary of the old undivided Territory, William Henry Harrison, afterward President of the United States, was made first Governor of the Territory of Indiana. His most serious difficulty was with the Indians, who were led by a powerful chief, Tecumseh. At the battle of Tippecanoe, November 7, 1811, Harrison defeated the Indians, and there was greater security thereafter. Indiana was admitted into the Union December 11, 1816. The State suffered much from speculation in lands and railroads, but has nevertheless grown in population and wealth, its chief industries being the raising of corn and wheat. It has also a large and varied manufacturing interest, being ninth among the States in the value of manufactured products. Indiana is popularly called the **" Hoosier State."** It has produced an unusual number of well-known writers, of whom one of the most distinguished is General Lew Wallace. Its older institutions of learning are: Indiana University (1820), Wabash College (1832), DePauw University (1837).

MISSISSIPPI.

The State of Georgia claimed the country included within her parallels westward as far as the Mississippi River, and in 1802, following the example of other States, ceded to the Union so much as lay west of her present western boundary. This was erected into the Territory of Mississippi, taking its name from the great river upon which it lay, which signifies in the Indian tongue " father of waters." In 1817 this Territory was again divided, the western portion being admitted into the Union, December 10, as the State of Mississippi, the eastern becoming the Alabama Territory. Mississippi was one of the earliest to adopt an ordinance of secession, and the President of the Confederacy was a citizen of the State. The battles of Vicksburg, Corinth, and Holly Springs were fought on her territory. Mississippi was restored to the Union in February, 1870. Raising cotton was long the chief industry, but of late other agricultural products have received large attention. The manufacturing industry centers about lumber and timber products and cottonseed oil. Its familiar name is the **" Bayou State."**

ILLINOIS.

The French in their early occupation of the Northwest found a tribe of Indians whose name, as they wrote it, was the Illinois, and the river by which this tribe lived bore the same name. The river, and the country now comprised in the State of Illinois, were first visited by **La Salle** in 1670, and again by **Marquette** and **Jollet** in 1673. The Indians had a great town where the present town of Utica in La Salle county stands, but it was destroyed by the powerful hostile tribe of Iroquois, and the Illinois Indians themselves were deprived of power. A century later they were again attacked by the Potawatamies of Starved Rock and almost utterly exterminated. The French early established military and trading posts here; and Kaskaskia, which was founded as early as 1682, became the chief town of what was known as the Illinois country, a district having substantially the same bounds as the present State. The French inhabitants lived at peace with the Indians, and were under the almost absolute control of the military commandant.

By the Treaty of Paris, in 1763, the country was ceded by France to England, and the English took possession, to the great anger of the Indians, who were far more reconciled to French rule. Virginia claimed the country under her patent, but in 1784 ceded it to the United States, and it became part of the Northwest Territory. Illinois was set off from Indiana Territory in 1809, and, December 3, 1818, was admitted as a State into the Union. The present constitution was adopted in 1870.

The State rapidly became populated, and great enterprise was shown; but indebtedness was incurred to such an extent that in 1842 the governor, in a message to the legislature, declared that the State had not credit or money with which to purchase a pound of candles. It was the darkest period in the history of Illinois, and the action of the people in convention in 1847, by which they subjected themselves to a heavy tax, was one of courage and honesty. Its chief city, Chicago, is a marvelous illustration of rapid growth. In 1831 Chicago contained but twelve families besides the small garrison of Fort Dearborn. It now has a population of about 2,500,000 and is the second city in the Western Hemisphere. Illinois is sometimes called the **" Prairie State."**

In 1850 Congress granted a vast quantity of land to the Illinois Central Railroad Company, and this road was a stimulus to emigration; so that Illinois enjoyed a rapidity of growth greater, perhaps, than that of any other State. It suffered a check in the **burning of Chicago,** October 8 and 9, 1871; but the rapid recovery of the city indicated the elasticity of the people and the self-confidence which so great a calamity could not impair. The great wealth of the State is mainly in its farms. Illinois is third among the States in the value of its manufactured products, and leads in slaughtering and meat packing as well as in the production of distilled liquors. Founding and machine shop products and men's clothing are also important. The Universities of Illinois and Chicago and Northwestern University have each over 4,000 students.

ALABAMA.

In 1817 the Territory of Mississippi, as all that portion west of Georgia and east of the Mississippi River was called, was divided, andthe eastern half made into Alabama Territory. On December 4, 1819, this Territory was received into the Union as a State. An ordinance of secession was passed January 7, 1861, and the **first organization of the Southern Confederacy** was at Montgomery, which for a time was made the capital. The State was the scene of military operations during the war, especially of those which resulted in the capture of Mobile by the Unionists. It was received back into the Union June 25, 1868. The chief product of Alabama is cotton. Alabama, favored by extensive coal and iron deposits, is now a large producer of iron and steel. Lumber, cotton goods, and machine shop products are also important.

MAINE.

The coast of Maine, the **"Pine Tree State,"** was early visited by English explorers, and an attempt was made at a settlement in 1607 near the mouth of the Kennebec River. The colony, which was sent out by the Plymouth Company, did not succeed, and the post was abandoned. The first permanent settlements were made at Monhegan and Saco about 1622. In 1639 **Sir Ferdinando Gorges** obtained from the king of England a grant of land reaching from the Piscataqua to the Kennebec. He set up a capital at York, then called Gorgeana, and gave to the whole country the title of the Province of Maine, the name being first used, it is said, to designate the mainland as distinct from the islands. Gorges was a royalist, and his fortune was involved with that of Charles I., so that the grant came in 1652 under the control of Massachusetts, although the authority was constantly disputed. The French on the north and east made incursions during the various French and Indian wars, and the settlements, widely scattered, were in **constant peril from the Indians.** In 1677 Massachusetts, to perfect her title, bought the rights and claims to this territory from the heirs of Sir Ferdinando, and in 1691 the jurisdiction was confirmed by the royal charter.

Maine suffered during the Revolution by the descent upon her coasts of British vessels, and the burning of Falmouth, now Portland. In 1783 the treaty of peace again recognized Maine as a part of Massachusetts, and the State entitled this portion the District of Maine. In the war of 1812, Maine, from its exposed position and nearness to British territory, was especially open to attack. It was admitted to the Union March 15, 1820. For a long time the exact line of separation from Quebec and New Brunswick was the subject of dispute, which nearly issued in war, but the difficulty was adjusted by treaty in 1842. The long coast line, the number of navigable rivers, and the large tracts of woodland have helped to determine the character of the industries of the State, which is a great lumber region, and, before the civil war, was noted for its shipbuilding. Its water power fosters a steady development of manufactures, paper and wood pulp, lumber, and textiles being the leading products. A flourishing colony of Swedes has been formed in Aroostook county. Bowdoin College (1794) is the best-known educational institution of the State. There are also Bates College, Colby College, and the University of Maine.

MISSOURI.

The country occupied by the present State of Missouri was a portion of the Louisiana Purchase, and became a part of the District of Louisiana in 1803. The country had been first visited by Marquette and Joliet in 1673, and the river Missouri, or " muddy water," gave the name to the land bordering it. In 1812, the Territory of Missouri was constituted, when Louisiana was made into a State, and in 1817 the Territory applied for admission as a State. The request gave rise to a long and bitter political discussion growing out of the slavery question, and in the end Missouri was admitted as a slave State, August 10, 1821, by a **compromise** which decreed that slavery should never be established in any State which in the future might be formed north of 36° 30′. Nevertheless, Missouri, which possessed great mineral wealth, grew rapidly in a direction not especially favorable to the slaveholding interest. When the civil war broke out, public opinion there was divided, and for a long time it was uncertain what would be the final result. The State finally elected to remain loyal to the Union.

Missouri is a large producer of coal, and leads all the States in the production of lead and zinc. In manufacturing Missouri, favored as it is by ample waterways and railroads, holds tenth place among the States. The leading industries include slaughtering and meat packing, boots and shoes, flour, malt

liquors, lumber, and foundry and machine shop products. A large part of the world's supply of corncob pipes comes from Missouri. Washington University and the University of Missouri are leading educational institutions.

ARKANSAS.

Arkansas, sometimes called the **"Bear State,"** was a portion of the Louisiana Territory, and took its name from the Arkansas River. In 1819, when the State of Louisiana was formed, Arkansas constituted a portion of the new Missouri Territory, but was admitted into the Union as a State June 15, 1836. It was closely identified with Southern interests, and adopted the ordinance of secession March 4, 1861, returning to the Union June 22, 1868; but for several years it was, like other reconstructed States, the scene of much political conflict. It is almost wholly agricultural, the only considerable manufacturing interests being those concerned with lumber and timber products.

MICHIGAN.

In the year 1640 the shores of Lake Michigan were partially explored for the first time by white men. In 1668 Père Marquette planted a mission at Sault Sainte Marie. In 1670 La Salle visited its waters, and for a long time Michilimackinac was a center of Jesuit missions and Indian trade. In 1701 a military colony was planted at Detroit, and in 1760, during the French and Indian war, the garrison fell into the hands of the English, and the fort remained as an important stronghold. In 1763, while the English were in possession though the people in the vicinity were chiefly French, the powerful Indian chief **Pontiac** made an unsuccessful attempt to take the place by stratagem, and afterward by direct attack. In the severe war which followed, Detroit alone, of the frontier posts, escaped capture by the Indians. It was long besieged, but the siege was finally abandoned. By the treaty of 1783 the country passed into the hands of the United States, and was constituted a portion of the Northwest Territory. In 1805 Michigan was erected into a Territory by itself.

There were difficulties regarding the boundary with Ohio, and when Michigan became a State, January 26, 1837, it was under conditions which were generally unsatisfactory to the people. The State, however, has had a vigorous and substantial growth. It is sometimes known as the **"Wolverine State."** The system of education which prevails under legislative authority is comprehensive and continuous. It is considered one of the greatest of the agricultural States; it has, besides, large lumber interests, and is rich in minerals, especially in copper ore. In production of iron it is the second State of the Union. Its great extent of lake shore has led to the development of a large coasting business, which is connected with an extensive railroad system. Michigan, the seventh State in the value of its manufactures, leads in the production of automobiles, and is second in furniture. The name Michigan is said to mean, in the Chippewa tongue, "great lake." The revised constitution was submitted to and approved by popular vote in November, 1908. The University of Michigan is one of the oldest and largest State Universities.

FLORIDA.

The oldest existing European town on the continent of America is that of St. Augustine in Florida, which dates from 1565. Florida itself was discovered in 1512 by Ponce de Leon, who had grown rich as governor of Porto Rico, and was now, an old man, looking for a land which was fabled to contain, besides gold, **a marvelous fountain,** the waters of which had the **gift of perpetual youth.** He named the coast upon which he landed Florida, because the day of his landing was Easter Sunday, called by the Spaniards Pascua Florida. The Spaniards extended the name to and claimed as their own the whole country from the Atlantic on the east to the longitude of New Mexico on the west, and from the Gulf of Mexico indefinitely northward. Before the Spanish, however, made any settlement on the coast of what is now known as Florida, the French Huguenots had established a colony, in 1564, on the St. Johns River, where a fort was built called Fort Caroline, after Charles IX. The next year the Spaniards fell upon the little colony and exterminated it with ferocity. Their own forts were in turn attacked by Dominique de Gourgues in 1568, in a spirit of revenge, and utterly demolished, but the settlement of St. Augustine remained, the French Protestant attempts were never repeated, and Florida continued a Spanish settlement. On the east was St. Augustine, on the west was Pensacola, established in 1696, but there was no real colonization, these points being only military posts and mission stations.

After the charter given by Charles II., in 1663, for the settlement of the Carolinas, a diplomatic correspondence with Spain led to the establishment of the St. Mary River as a boundary line between the English and Spanish possessions, and this boundary continued to separate Georgia from Florida. A frontier war broke out, sometimes reflecting the course of European conflicts, sometimes representing local difficulties; but by the Treaty of Paris in 1763, Florida was ceded by Spain to the English government. On the settlement of hostilities in 1783, at the close of the Revolutionary war, Florida was retroceded to Spain. Its position rendered it an asylum for runaway slaves, and a basis of operations for hostile Indians. When the Seminole war broke out in 1818, the Spanish authorities in Florida gave such aid to the enemies of the United States that **Andrew Jackson,** in command of the United States forces, crossed the border, and carried on the war there. His proceedings precipitated what had been foreseen as inevitable, and in 1819 the United States bought Florida from Spain for five million dollars. It was organized as a Territory, and admitted to the Union March 3, 1845. It passed an ordinance of secession, January 10, 1861, and was one of the first of the States to be received back into the Union, being readmitted June, 1868. **The attractiveness of the climate** of Florida has made it a resort for many Northern families during the winter, and a considerable tide of emigration has set in that direction from the North. The culture of the orange, grapefruit, and pineapple is extensive and successful, and in other respects the country is proving an important producer for the markets of Northern cities. Florida is called the **"Flower State."**

TEXAS.

The coast of Texas was included by the Spaniards in their earliest claims, but the first settlement by Europeans was at Matagorda Bay by a company forming part of La Salle's command in 1685. Four years later the Spaniards, suspecting that the French had been before them, hunted for this settlement and found it in ruins. It was not till 1715 that the Spaniards began to occupy the country permanently. The name of Texas was taken from a tribe of Indians occupying a small portion of the territory. When the United States bought Louisiana from France in 1803, it was claimed that Texas constituted a portion of the purchase, but the title was undetermined, Spain continuing to claim possession, and upon the purchase of Florida from Spain in 1819 the United States relinquished any right they might have to territory west of the Sabine River. Two years later this territory became a part of the republic of Mexico, upon the revolt of that country from Spanish rule, and remained a province of Mexico until 1835. The country meanwhile received considerable emigration from the United States, and for some time, owing to its position, was the resort of those who wished to escape justice or otherwise to lead independent lives. Adventurers of various kinds sought the country, and aided Texas in asserting its independence of Mexico. This was secured at the decisive battle of **San Jacinto,** April 21, 1836, where General Sam Houston, the first president of Texas, commanded. During the following year the new power was recognized by the United States, Great Britain, France and Belgium.

The Texans soon sought annexation to the United States. This was urgently favored by the South, which saw in the measure a means of strengthening the slaveholding interests. The question became one of national moment and was bitterly discussed until, treaty negotiations failing, a joint resolution of both Houses, March 1, 1845, accomplished annexation. Texas was admitted to the Union on December 29 of the same year. It passed an ordinance of secession in 1861, and was the last of the Confederate States to acknowledge Federal supremacy. The great extent and vast resources of the State have made it an inviting field for enterprise. The raising of stock and culture of cotton are among the chief industries of the State, which is yearly receiving large accessions by immigration. Its rapidly growing manufactures center about slaughtering and meat packing, flour, lumber, and cottonseed oil. The exports from Galveston are greater than from any other American port except New York. Texas is the **"Lone Star State."** The State University was founded in 1883.

IOWA.

Iowa, taking its name from an Indian term, said to signify "the beautiful country," often called the **"Hawkeye State,"** was a part of the great Louisiana Purchase of 1803. The first settlement within its borders of any consequence was made by a Canadian Frenchman, Julien Dubuque, who obtained a tract of land in 1788, including the site of the present city of Dubuque, where he built a fort and traded with the Indians until his death in 1810. In 1833 a town was established there, and one was also begun at Burlington by emigrants from Illinois. At first a part of the Territory of Missouri, it became in 1838 a separate Territory, and was admitted into the Union December 28, 1846. From time to time the Indians occupying the soil have been removed westward, until there are now but a few individuals left. Iowa is primarily an agricultural State, but slaughtering, meat packing, and coal mining are important industries. The percentage of illiteracy is less than in any other State. Among educational institutions, specially to be noted are Iowa State University and Iowa College.

WISCONSIN.

As early as 1634 Jean Nicollet, a French trapper, had visited the country, now known as Wisconsin from the name of its principal river, which is said to mean "the wild, rushing river." Forty years later Marquette and Joliet visited the region and made it better known. The first settlement was by the French at Green Bay, in the seventeenth century. The country formed a part of the Northwest Territory, and subsequently, upon the division of that, a part of Illinois and of Michigan. In 1836 it became a separate Territory, and was admitted as a State May 29, 1848, at which time it formed the extreme northwest portion of the Union. The constitution then adopted is still in force. It is sometimes called the **"Badger State."**

It has received a large number of immigrants, especially from the north of Europe, who have been mainly occupied in agriculture. In the value of its manufactures Wisconsin is eighth among the States. Lumber and timber products, foundry and machine shop products, dairy products, leather, and malt liquors are all important. The name which the State bears was applied to the Wisconsin River by the Indians. The University of Wisconsin is at Madison.

CALIFORNIA.

The country now occupied by California owes its name to the great Spanish captain, Cortes. He sent out an expedition which discovered the coast in 1537. The Spaniards named the country California after an imaginary kingdom of Amazons, so called in a Spanish romance. The English under Sir Francis Drake also visited the coast, including Oregon, as early as 1579, and claimed the country under the name of New Albion, but they made no attempt to enforce their claim. The Spaniards on the other hand never lost sight of the country, sent expeditions thither and began to establish Jesuit missions in it near the close of the seventeenth century. The first civilization was introduced through these missions, which were the center of industrial, religious and educational influences upon the Indians. Spanish words and customs became a part of the Indian inheritance. But there was no further European colonization.

When Mexico became independent of Spain, California remained a province of the former. During the war between the United States and Mexico a few Americans in California raised the standard of revolt and declared California independent. At the same time the United States fleet under Commodore Sloat hastened to take possession of the country. On July 14, 1846, seven days after he had occupied Monterey, the British squadron arrived for the same purpose, but too late. Captain John C. Frémont coöperated by land, and the whole region was in American hands before 1847.

The treaty of peace with Mexico confirmed the United States in the possession of California and New Mexico. In return the United States paid Mexico fifteen million dollars and assumed debts of Mexico to Americans to the amount of three millions more. Almost simultaneously with the treaty came the discovery of gold in California. Immediately, from all parts of America and the Old World, gold hunters, braving terrors of all kinds, flocked by sea and land to the new country. Within four years the population reached a quarter of a million, and San Francisco became a flourishing city.

California was admitted into the Union September 9, 1850. At first the mining of gold had been the industry which attracted every one, but it was early discovered that the State offered great advantages to the agriculturist. Having a length from north to south of nearly eight hundred miles, enjoying every variety of climate and intersected by mountain ranges, there is hardly any vegetable product which cannot be produced abundantly in some part of the State. California is the first State in the production of fruit, wine, and petroleum, and leads also in canning and preserving. The **"Golden State"** is an empire in itself. Its two greatest educational institutions are the University of California and Leland Stanford Junior University.

MINNESOTA.

The region of Minnesota, or Cloudy Water, was first visited by La Salle and Hennepin in 1680. Lying on both sides of the Mississippi River, its territory was derived both from the Louisiana Purchase and from the Northwest Territory.

Population moved slowly into the Territory, for there yet lay in the way large areas scarcely occupied. In 1838 there were but a few log cabins on the site of St. Paul, and the town was not fairly settled until 1846. In 1849 the Territory of Minnesota was organized, with the Missouri River as its western boundary. It was thinly settled, but when in 1851 the Sioux ceded all their lands east of the Sioux River to the United States, population came in rapidly, and Minnesota with its present boundaries was admitted as a State May 11, 1858. In 1862 the State suffered severely from **depredations committed by the Sioux.** In the space of two days over seven hundred white settlers were massacred. A war followed which ended in the expulsion of the hostile Indians. The State has been largely recruited of late years by Scandinavian immigrants, and its vast wheat fields constitute **one of the greatest granaries in the world.** Minnesota leads all the States in the production of iron ore and flour. Minneapolis is the seat of the University of Minnesota.

OREGON.

The history of Oregon as a political organization does not begin until 1848, when all the region west of the Rocky Mountains and north of California was erected into the Territory of Oregon. The State of Oregon, with its present boundaries, was received into the Union February 14, 1859, but the soil of Oregon was the scene of most interesting adventures long before that date. The coast as a whole was first explored near the close of the eighteenth century by merchant ships. In 1792 Captain Gray of Boston went up the Columbia River, which he named from his ship. Immediately after the purchase from France of the Province of Louisiana, President Jefferson sent out an exploring expedition under Captains Lewis and Clark, which went to the headwaters of the Missouri River, and thence across the mountains and by the Columbia to the Pacific coast. Great interest was excited by the reports made, and John Jacob Astor, a wealthy New York merchant who was engaged in the fur trade, established a settlement on the banks of the Columbia, which received the name of Astoria. British fur traders also established posts, and the territory was claimed both by Great Britain and by the United States. Russia also for a time put forth claim to the Oregon country south of 54° 40′. In 1818 Great Britain and the United States agreed to hold the territory in question jointly for ten years. This compact was renewed in 1828. Continually the Hudson Bay Company increased its posts, but the American settlements were few. In the winter of 1842–43 Dr. Marcus Whitman, a Presbyterian missionary, made a heroic journey on horseback from Oregon to Washington to urge upon the Government a vigorous assertion of American rights to the region. He stimulated the first considerable immigration from the east. Possession was conceded to the United States in 1846 and the main boundary line then determined between the Territory and the British possessions on the north. Yet the boundary dispute did not receive its final solution until the award of the German Emperor in 1872. For a generation there was a succession of murderous Indian wars, the last ending in 1878. The United States in 1850 passed an act, granting three hundred and twenty acres to every man and the same to his wife on condition of four years' residence on the land. But the population increased slowly. Agriculture and lumbering are important industries. The constitution, adopted in 1859, was radically amended in 1902. During the last few years the solution of many political and economic problems has been attempted. Oregon has been called the **" Sunset State."**

KANSAS.

After the Louisiana Purchase of 1803 had been reduced in area by the successive erection of States and Territories bearing the names of Louisiana, Arkansas, Missouri, Iowa, and Minnesota, there still remained a great tract of country which was organized into the Territories of Kansas and Nebraska by the act of 1854, in accordance with which the inhabitants of these Territories were to decide for themselves whether the States to be formed should be slave or free. The principal struggle was in Kansas, the more southern of these Territories, so called from an Indian word applied to its principal river, and meaning " smoky water." Immediately immigrants began pouring into the country from North and South, each section aiming at controlling the destiny of the country, while from Missouri came men at every election, it was claimed, who would cast ballots and then return to their own State. The political conflict raged with great vehemence; at one time there were **two Territorial governments and two capitals,** while from 1855 to 1857 a petty war was actually waged. The aid given by societies at the North stimulated emigration from that section, and it became evident at length that the preponderance of numbers was on that side. The State was received into the Union January 29, 1861. Kansas is preeminently an agricultural state. Its industrial activity centers about meat packing, flour, coal mining, and natural gas. The State University was founded in 1864.

WEST VIRGINIA.

When Virginia passed the ordinance of secession there was much opposition from the western part of the State, where the mountainous region and the proximity to the free States had made slavery less popular. So considerable was this opposition, that the Southern army occupied it in force, and some of the earliest engagements of the war took place in this region. Here were fought the battles of Philippi, Rich Mountain, and Carrick's Ford, at all of which McClellan, at the head of the Union forces, was victorious. A fresh attempt was made by Governor Wise of Virginia and General Floyd to recover the position. Floyd was surprised and defeated at Carnifex Ferry, and the Confederate government shortly recalled its forces. Congress was desirous of recognizing in a marked manner a district so decidedly loyal and, disregarding technicalities, received West Virginia as a State June 19, 1863. West Virginia, the **"Panhandle State,"** is rich in petroleum and natural gas and has a large coal mining industry. The lumber industry is also important.

NEVADA.

Nevada, which takes its name from the Sierra Nevada, or snow-covered mountain peaks, occupies part of the territory acquired from Mexico by the Treaty of 1848. When California was set off in 1849, the territory on the east was organized as Utah Territory. In 1859 silver was discovered in Nevada in large quantities, and then there was a repetition of some of the scenes which accompanied the discovery of gold in California. Its first settlement was at Carson City. It was set off from Utah and organized as a Territory in 1861, and was admitted into the Union as a State October 31, 1864. Since 1880 there has been a decrease in population, so that it is the least populous of the States. Stockraising is carried on, but the chief wealth is found in its mineral resources, especially in gold and silver, whence its name of the **"Silver State."**

NEBRASKA.

Nebraska derives its name from the Indian tongue, where it signifies "water valley." By the act of 1854 Nebraska Territory was formed, and, like its neighbor, Kansas Territory, was thrown open to all comers, who were to determine whether or not slavery should be permitted there. The same struggle went on as in Kansas, but being the more northern State, it was less violently contested, and the brunt of the conflict was borne by Kansas. The Union Pacific Railroad, the first built of the transcontinental railways, passes through it, and has done much to accelerate the development of the State. Nebraska was admitted to the Union March 1, 1867. It is a prosperous agricultural State. It has no State debt. The leading industries of the State are slaughtering and meat packing, and flour milling. William Jennings Bryan, three times Democratic candidate for the presidency, is a citizen of Nebraska. The University of Nebraska is situated at Lincoln.

COLORADO.

The discovery of gold near Pike's Peak in 1858–59 first called special attention to the country, but the difficulties in the way of mining and the discoveries in other sections checked immigration. Meanwhile, the delightful climate of Colorado, and the great fertility of the soil, attracted many who were indifferent to mining, and the new population gave attention at once to matters which are rarely the first subjects of interest in a new country. The Territory was organized in 1861. Colorado is sometimes called the **" Centennial State,"** because admitted to the Union on August 1st of the centennial year 1876. Its development since has been remarkable. Denver is the center of traffic in live stock among the Rocky Mountain States. Irrigation has brought large areas in the State under cultivation. The mining of gold, silver, and coal and the beet-sugar industry are carried on on a large scale. The leading educational institutions are the State University, Colorado College, and the University of Denver.

All citizens, male and female, twenty-one years of age, are qualified voters.

NORTH DAKOTA.

North Dakota is in the northeasterly section of the great Louisiana Purchase and in 1849 became part of the Minnesota Territory. In 1861 the Territory was organized and called Dakota, from an Indian word meaning " leagued " and having reference to the allied Sioux tribes who occupied these regions. The bounds then included tracts afterwards set off for Montana and Wyoming. Railroads first crossed the Red River in 1872, and then began the rapid growth in population. In 1889, the land then remaining was divided, on the 46th parallel, as North and South Dakota, and an act of Congress provided for the formation of their constitutions and State governments. Both States were admitted on November 2, 1889. North Dakota is a fertile agricultural region, containing very extensive farms devoted mainly to the production of wheat, crops of which ripen within a hundred days from the time of seeding. Much live stock also is raised.

SOUTH DAKOTA.

This State is for the most part an open prairie country, well watered, and adapted for agriculture and grazing. The Black Hills, in the same region, have forests of pine and hard wood: the cultivation of timber, which is generally deficient, has been promoted by legislation. The Black Hills have a general elevation of 4,000 feet, the highest point, Harney Peak, rising to 7,216 feet; these cover an area of ninety by sixty miles, and extend into Wyoming. In this district are extensive deposits of gold, silver, and tin, South Dakota being the fourth of the States in production of gold. Coal and lignite also occur, as well as excellent building stone, granite, red jasper, sandstone, and chalkstone. In other parts of the State the majority are occupied in agriculture and grazing cattle, the raising of stock being facilitated by the abundance of native grasses and the large production of corn. No extensive manufactures are carried on, though flour milling, dairy products, and the lumber industry are of some importance. More than one fourth of the area of the State is given up to Indian reservations.

MONTANA.

Originally a part of the Louisiana Purchase, Montana has since formed a part of Oregon, Washington, Nebraska, Dakota, and Idaho. While included in the last, the discovery of gold caused a rapid inflow of population. Organized as a Territory in 1864, on November 8, 1889, it was admitted as a State. The name suggests its situation, one sixth of its area being on the western slope of the Rocky Mountains, the remainder on the eastern slope, extending into the plains of the Mississippi valley. Included in the latter are the " Bad Lands" (Mauvaises Terres), a highly picturesque region, abounding in iron and coal, and producing rich grasses that facilitate the rearing of cattle. The climate is dry and bracing: while the winter is severe in some localities, it is modified by the " Chinook " winds, coming from the warm Japan current in the Pacific Ocean, and passing over the Rocky Mountains. The valleys are fertile, and adapted to the raising of cattle, sheep and horses, which is an important industry. Montana is among the three states producing the largest amount of copper. Other extensive mining interests include gold, silver, and coal. In manufacturing, the smelting and refining of copper holds first place. Much business is also done in lumber, the mountain uplands being covered with excellent timber. Great trouble was experienced with the Sioux, Cheyennes, and other Indians in 1876 and following years.

WASHINGTON.

Washington is the most northwestern of the United States. It was originally that part of the great Oregon country the title to which was in dispute for many years, both English and Americans claiming it. The boundary question was settled in 1846, when the parallel of 49° was agreed on. In the joint occupation, meanwhile, by Englishmen and Americans, the energies of the former were directed chiefly toward trading with the Indians for furs. The pioneers of the Americans were missionaries to the Indians, who did much to call the attention of their fellow countrymen to the fertile lands watered by the Columbia and its tributaries. Eminent among them was Dr. Marcus Whitman, who was later murdered by the Indians. After 1846, the only point

in dispute between Great Britain and the United States was the interpretation of that clause of the treaty which provided that the boundary line should follow the middle of the channel dividing Vancouver Island from the mainland, and proceed through the middle of Fuca Strait to the Pacific. In this channel were a number of islands. The Americans maintained that the line should follow the deepest and broadest course, Canal de Haro; the British contended for the directest and the one most used in navigation, Rosario Strait. The dispute was referred to the German emperor, who decided in 1872 in favor of the United States. Washington was organized as a separate Territory in 1853 and admitted into the Union as a State on November 11, 1889.

The natural advantages of Washington arise largely from the deep indentation of Puget Sound, 2,000 square miles in extent, and navigable for more than 100 miles by the largest vessels. These splendid possibilities of commerce accord with the resources of the country. The soil is rich, and produces the cereal crops in profusion; pasturage for live stock abounds in the eastern plains; the rivers and bays yield fish that are packed in great quantities for shipment; the western section is heavily wooded with forests of cedar, pine, and spruce; and there are large deposits of coal, the mining of which, as well as of gold, silver, and lead, has been greatly stimulated by the completion of railroad connections with the East and with Oregon and California. The ports of Seattle and Tacoma are increasingly important in the trade with the Orient.

IDAHO.

This State as now bounded was formerly included within Washington Territory. From Washington and Dakota and Nebraska were set off, in 1863, Idaho Territory, from which Montana was formed in 1864, and Wyoming, in part, in 1868. What then remained to Idaho was an irregular triangle 480 miles in length from north to south, lying between the two new Territories on the east, and Washington and Oregon on the west. The Territory became a State on July 3, 1890. From the time of the first missionary settlements at Cœur d'Alene, in 1842, there was little immigration until 1860, after which the building of railroads on the south and east occasioned a growth that has been constant and substantial. The northeastern boundary of the State is a main ridge of the Rocky Mountains, which has peaks 14,000 feet high, and forms numerous valleys at heights of 5,000 feet above sea level, including considerable arid lava districts that abound in geysers and hot springs. The elevated position makes the climate a healthful one, the winter cold being tempered by the warm winds from the Pacific. The northern districts have an abundant rainfall, and the soil of the river valleys is very productive, affording grazing for great herds of live stock. In the southern half of the State extensive irrigation works are being carried out. Forests of valuable timber cover the mountains up to the snow line. About the headwaters of the streams gold is found, and silver and lead occur in the south. Coal and iron are known to be plenty. Both men and women are entitled to the suffrage.

WYOMING.

Wyoming — acquired mostly by the Louisiana Purchase, but in part by the Mexican Treaty of 1848 — lies principally on the eastern slope of the Rocky Mountains, extending eastwardly into the great plain of the Mississippi, though the southwestern portion slopes toward the Pacific. The greater part of the surface is mountainous, but between the mountain ranges are extensive fertile plateaus and table-lands. In these rise many large streams. Chief of them is the Yellowstone River, the largest tributary of the Missouri, whose source is Yellowstone Lake, at an elevation of 7,788 feet above the sea. This lake is in the great National Park, which lies mostly within the bounds of Wyoming, but extends into Montana and Idaho. The climate is healthful; in winter there is often extreme cold, and the plains are swept by severe winds from the mountains; but the mild summers make the region a health resort. The natural resources are varied but undeveloped. The soil of the plains is extremely fertile; irrigation is afforded by the abundant streams; and the pasturage lasts throughout the year, supporting millions of cattle and sheep. There are mines of gold and silver, copper, iron, and soft coal, besides various other mineral resources. A large part of the surface is wooded with valuable timber. Cheyenne, the capital, is an important railroad center and a point of supply for the stock-raising and mining districts of Wyoming and Montana. Wyoming was organized as a Territory in 1868; in 1889 a convention adopted a State constitution remarkable as being the first to give women the suffrage on the same terms with men. This constitution being duly ratified by a popular vote, the State was admitted by act of Congress approved July 10, 1890.

UTAH.

Utah, a part of the Mexican cession of 1848, was organized as a Territory in 1850, its present area having remained unchanged since Wyoming Territory was cut off from it in 1868. The first settlement was made at Salt Lake City, in 1847, by Brigham Young. He led thither one hundred and forty-three Mormons, who fled from persecution in Ohio, Illinois, and Missouri, and for thirty years he conducted their affairs with great skill and energy. Utah consists of two great plateaus about 5,000 feet above the sea level, and divided by the Wasatch range of mountains, which run nearly north and south the entire length of the State, having peaks 12,000 and 15,000 feet in height. The high eastern table-lands much resemble the surface of Wyoming and Colorado, and there are many fertile valleys, in a high state of cultivation. West of the Wasatch mountains all the streams either disappear in sinks in the desert or flow into salt lakes. Chief among these, in the extreme northwest of the State, is the Great Salt Lake, eighty miles long and forty wide, which receives the drainage of 20,000 square miles, and has no outlet, being apparently the remnant of a great inland sea which has gradually subsided by evaporation; so salt is its water that no fish can live in it, but its curative powers attract many bathers in search of health or recreation. The Great Basin surrounding the lake is traversed by many short streams, flowing from the mountains, whose waters have been used to irrigate the fertile valleys; still, it is estimated that less than five per cent of the area of the Territory is available for agriculture. There are no navigable rivers in the State. Except for pine forests in the mountains and cottonwood along the banks of the streams, there are no trees. In the northeastern part of the State, however, are rich grasses that render the raising of stock profitable, and the yield of wool is large. The mining output in 1906 was to the amount of $34,998,856, copper, silver, lead, gold and other metals and minerals. Nearly all the manufactures for home consumption are carried on within the borders of the State, and its exports greatly exceed the imports. Railroad facilities are ample, in every direction. Utah was proclaimed a State by the President January 4, 1896. In accordance with the act providing for admission, the State constitution prohibits polygamy, and provides for religious freedom, nonsectarian schools, and the complete separation of church and state. Both men and women have the suffrage.

OKLAHOMA.

The State of Oklahoma was made up of the Territory of Oklahoma and Indian Territory. By act of Congress, June 30, 1834, it was declared that "all that part of the United States west of the Mississippi and not within the States of Missouri and Louisiana or the Territory of Arkansas" should be considered the Indian Country. Thus for a time it comprehended the greater part of the Louisiana Purchase of 1803 from France. Territories and States, successively formed, reduced its dimensions. Between 1854 and 1889 Indian Territory comprised an area of about 70,000 square miles, in which various Indian tribes, mostly Cherokees, Creeks, Choctaws, Chickasaws, and Seminoles, had been located by the government.

In the western half the Indians ceded their rights to the United States in March, 1889. A proclamation of the President opened it to settlers in the following April, whereupon immigration rapidly set in. An act of Congress, approved May 2, 1890, established it as the Territory of Oklahoma, with Guthrie as the capital and with fixed boundaries. At the same time it was provided that any member of an Indian tribe residing in Indian Territory may obtain naturalization as an American citizen and still retain his tribal rights and privileges. The Congress was careful that all individual rights and properties of the Indians be respected, and that the Indians on their reservations be protected from encroachments by white settlers.

In both the Territories the largely increasing population required something more than Territorial government. Congress approving, a constitutional convention was held at Guthrie on November 20, 1906, and after four months of deliberation submitted a constitution to the people, which was adopted by an overwhelming majority on September 17, 1907. The State was received into the Union on November 16, 1907. At the time of its admission it had 1,414,042 inhabitants, thus taking rank as the twenty-fourth State in population, twenty-two States having a less number. No other State has so detailed and so comprehensive a constitution. Nowhere else is the effort so resolutely made by constitutional provision to guard individual rights and privileges against violation by corporate interests. The constitution is an attempt at the solution of social and economic problems. The extraordinary enterprise and energy of the people are manifest in every sort of activity, financial, agricultural, industrial, educational, religious. It is a typical fact that the University of Oklahoma was founded only two years after the Territory was open to white settlers.

NEW MEXICO.

New Mexico lies partly within the territory of the Texan annexation of 1845, and partly in the Mexican cessions of 1850–53, having been enlarged in 1854 by the Gadsden Purchase of lands south of the Gila River. The Territorial government was organized in 1850, and included, besides the present State, the whole of Arizona and portions of Colorado and Nevada. Santa Fe, the capital and principal town, was an important Indian settlement when the Spaniards first visited the country, about 1542. There are rich mines of the precious metals and copper, some of which have been worked since the time of the Spanish conquest; but lack of water and depredations by the Indians have prevented their development. Lead, iron, zinc, and other minerals are found. The valleys of the streams and such table-lands as can be irrigated are fertile. The raising of stock is extensively carried on in the valleys.

Congress several times considered the admission of New Mexico as a State, and in 1875 a bill providing for it was introduced, but failed to become a law. Joint statehood with Arizona was rejected by the latter in 1906. An act of Congress approved June 20, 1910, provided for the admission of New Mexico to the Union upon the adoption of a constitution and its approval by Congress and the President. The constitution was framed later in the year and ratified by the people January 21, 1911; it was conservative, but met the disapproval of President Taft on account of the difficult means prescribed for amendment. A resolution of Congress approved August 21, 1911, provided that the voters of New Mexico ratify an amendment removing the objectionable difficulties to the process of constitutional amendment, as a condition precedent to statehood. Such an amendment was ratified November 7, 1911, and on January 6, 1912, New Mexico was proclaimed a State.

ARIZONA.

The portion of Arizona lying north of the Gila River was ceded by Mexico to the United States at the close of the war in 1848; the remainder was acquired by the Gadsden Purchase in 1854; and the whole remained a part of New Mexico until 1863, when it was organized as a Territory. For years its growth was retarded by the depredations of the Apaches and other hostile Indians; but the development of mines and building of railroads brought a population able to hold them in check, and its recent progress has been substantial. The surface of the country is a succession of table-lands, mountain chains, and valleys, the drainage being chiefly by the Colorado River and its tributaries. In their valleys, particularly in that of the Gila, irrigation has made the soil fertile enough to produce grains and fruits; and here and on the mountain slopes is pasturage sufficient to make the raising of stock profitable. Alfalfa is the most important crop. Mining, however, is the principal industry, but its progress is retarded by scarcity of water. Copper, silver, gold, and lead are abundant; the total mineral output in 1910 was valued at $43,483,912, of which $37,781,376 was copper. Manufactures are inconsiderable, chiefly of lumber and flour, and trade consists mostly of the exportation of mining products and imports of breadstuffs and manufactured articles. The territory includes the hottest and driest region in the United States.

By act of Congress, approved June 16, 1906, it was provided that Arizona and New Mexico might be united to form one State, on condition that a majority of the people in each Territory voted in favor of joint statehood. On November 6, 1906, a majority in New Mexico voted in favor, but a majority in Arizona against. An act of Congress approved June 20, 1910, provided for the admission of Arizona to the Union upon the adoption of a constitution and its approval by Congress and the President. The constitution, framed by convention in the autumn and ratified at the polls, was a radical document, including provisions for the initiative and referendum, for constitutional amendment by majority popular vote upon the initiative of 15 per cent of the voters, for direct primaries, for a direct advisory primary for U. S. senators, and for the recall of elective officials. A resolution of Congress to admit the territory was vetoed by President Taft August 15, 1911, on account of the provision for the recall of judicial officers. A resolution approved August 21, 1911, provided that the voters of Arizona ratify an amendment rejecting the recall of judicial officers, as a condition precedent to statehood. Such an amendment was ratified December 12, 1911, and on February 14, 1912, Arizona was proclaimed a State. Constitutional amendments ratified by the voters November 5, 1912, extended the recall to all officers of the state, including judges, and granted the franchise to women. By date of her admission, Arizona is sometimes called the Valentine State.

AMERICAN TERRITORIES AND DEPENDENCIES.

DISTRICT OF COLUMBIA.

A district ten miles square, obtained by cessions of land from Maryland and Virginia in 1788 and 1789, was set apart by Congress for the seat of government of the United States, and called the District of Columbia. Commissioners were appointed by President Washington in 1791 to lay out the District, and to secure a proper title to the soil. Major L'Enfant, aFrench engineer, planned the city of Washington, and the buildings necessary for the accommodation of Congress were erected before December, 1800. The city suffered loss from the occupation and burning by the British in 1814. In 1846 the Virginia portion of the District was retroceded to that State. The District is under the direct control of Congress, but the people have no voice in the electoral college.

HAWAII.

The archipelago known formerly as the Sandwich Islands, more recently by the native name of Hawaii-Nei or the Hawaiian Islands, and now as the Territory of Hawaii, consists of a group of twelve members, of which eight are inhabited and four uninhabited. Their entire area is 6,449 square miles. The largest islands are: Hawaii, 4,015 square miles; Maui, 728; Oahu, 598; Kaui, 547; Molokai, 261; Lanai, 139; Niihau, 97; Kahoolawe, 69. They lie in the central North Pacific on the crossroads of the ocean. The capital city, Honolulu, on the Island of Oahu, is 2,401 miles from Seattle, 2,100 from San Francisco, 3,310 from Acapulco, 4,665 from Panama, 5,147 from Callao, 2,263 from Pagopago, 3,850 from Auckland, 4,424 from Sydney, 3,387 from Guam, 4,778 from Manila, 4,917 from Hongkong, 3,400 from Yokohama.

It is not easy to overestimate the tremendous importance of this strategic center. It commands the main routes of international commerce and communication between the East and West and dominates the development of the future. Pearl Harbor in Oahu near Honolulu is capable of being rendered at relatively small outlay not only one of the finest but one of the vastest harbors in the world. The military reservation adjacent comprises 15,744 acres. The United States possess no other naval outpost which, on the completion of the Panama Canal, will be of equal value.

All the islands are of volcanic origin. A publication by the Geographical Society of Madrid in 1877 records a tradition that they were discovered by the Spanish navigator Gaetano in 1542. To this is added that Mendaña in 1567 determined the geographical position of Kaui. There is a further tradition that a Spanish ship was wrecked in Hawaii in 1527, and that the survivors left behind a progeny in the islands, which to the present time are recognized by their light complexion and other European characteristics. The natives call them Kekea, and themselves Kanakas.

The discovery of the Hawaiian group, however, may be more properly ascribed to Captain Cook. It was in January of 1778 that he sailed through the cluster from Kaui to Hawaii. Later in the same year he returned and explored Hawaii, until he provoked the natives and was killed (February, 1779). At this time, each island was ruled by its own chief. The chief of Hawaii was named Kamehameha. He is represented as a man of enterprise. When Vancouver came to the island, in 1792, he furnished the native king the keel of a ship, and taught him how to build.

Kamehameha in course of time produced for himself an insular fleet of twenty vessels. He supplied his soldiers with firearms, and made campaigns on the neighboring islands, until he conquered and united in one government six of them. Thus he became king of the Sandwich Islands. His reign extended to 1819, when he died and was succeeded by his son, Kamehameha II. To this epoch belongs the abolition of idolatry and of the system of taboo. Many of the old barbaric customs were interdicted from this time forth. In the year following the accession of Kamehameha II. a company of American missionaries reached Honolulu. Soon afterwards the English missionary Ellis brought with him Christian natives from Tahiti (the Society Islands). From this time there was progress in the direction of European civilization. The native language was reduced to a written form. In 1824, the king and queen went to England, where they both died of measles. After this time there was a regency until the heir Kauikeaouli came of age. The missionaries induced the sovereign to accept the Ten Commandments as the constitution of the kingdom.

In 1840, Kamehameha III., then in the seventh year of his reign, granted a new frame of government with civil rights to his people. Three years afterwards, a provisional cession of the islands was made to Great Britain, but in 1844, the independence of Hawaii was restored, and was guaranteed by Great Britain, France and the United States. The course of events in the islands was of comparatively small importance until the death of the childless Lunaliilo, in 1874, when a dynastic trouble arose, continuing until order was restored by the joint forces of Great Britain and the United States. The revolutionary period thus ushered in finally resulted in the establishment of the Hawaiian Republic in 1894. The strategic importance of the islands was strikingly demonstrated during the American-Spanish war. In 1898 in accordance with the desire of the Hawaiian government the islands were annexed to the United States. The Territory of Hawaii was established on June 14, 1900, and the organic act modified in 1905. The governor is appointed by the President, as are the judges of the supreme and circuit courts. The legislature is an elective body, consisting of two houses, the Senate of fifteen members chosen for four years and the House of Representatives of thirty members chosen for two years. Biennial sessions are held, limited to sixty days. The Territory is represented by a delegate in the National Congress.

The soil of Hawaii is in general highly productive and adapted to planting industries and to grazing. The timber supply is extensive. Two forest reserves were set apart in 1905 with an area of 19,853 acres. Of the agricultural products sugar is the chief, 521,123 tons being produced in 1908. Rice, coffee, honey, pineapples, bananas, hides, tallow and wool are exported in considerable quantities. The large plantations and the great industries in general are owned or controlled by the American residents, many of whom are descendants of the American missionaries.

The entire population was estimated in 1908 as about 180,000. According to the census of 1900 it was 154,001. Of these 29,787 were native Hawaiians; 7,843 part Hawaiians; 61,115 Japanese; 25,762 Chinese; 15,675 Portuguese; 1,730 British. The total white population was 28,533.

1778. The Hawaiian Islands are **discovered** and explored by **Captain Cook,** who is killed by the natives, February 14, 1779.

1792. The islands are visited and explored by Captain Vancouver.

1819. Kamehameha I. dies, and is succeeded by his son Kamehameha II., but the real authority is wielded by Kaahumanu, widow of the late king, who encourages progress and abolishes taboo.

1829. The **independence** of the Hawaiian monarchy is **recognized** by the United States.

1843. The independence of Hawaii is confirmed by action of Congress. This is followed, in 1844, with a like recognition by Belgium, Great Britain and France.

1846. A **land reform** is effected by King Kamehameha III., who conveys the royal lands to the people with the right of private ownership.

1852. Under the new constitution of this year, the right of citizen suffrage is granted to the people.

1854. Alexander Liholiho accedes to the throne with the title of Kamehameha IV.

1863. On the accession of Kamehameha V., a **conservative reaction** is brought on by the king, who forcibly abrogates the popular constitution, and limits the right of suffrage with a property qualification. The public buildings of Honolulu are erected during this reign.

1872. The dynasty of Kamehameha becomes extinct. An interregnum ensues, and then Lunalilo is elected king. His reign ends with his life in 1874.

The **Pearl River lagoon** is ceded to the United States as a station.

1874. Kalakaua is elected king by the legislature, but he is opposed by the faction of Emma, the Queen Dowager. A bloody war ensues, and order is restored by forces from the British and American fleets.

1887. The popular party agitates a reform by which the ministry shall be removable from office only by the consent of the legislature. Kalakaua accepts the reform, but tries to thwart the popular will.

1891. Kalakaua dies, and is succeeded by his sister, **Liliuokalani,** who seeks to evade or overthrow the constitution. She engages in intrigues in opposition to the legislature, until she is deposed by the revolutionary party. A provisional government is organized. Mr. Stevens, the minister of the United States, encourages the movement, and is supported by President Harrison.

1893. The **treaty** negotiated by President Harrison for the **annexation** of Hawaii to the United States is **withdrawn** from the Senate by President Cleveland, and the protectorate of the United States over the islands is disclaimed. The provisional government continues in authority, and propositions for the restoration of the monarchy are declined.

1894. On July 4, the **Republic of Hawaii** is proclaimed, and **Sandford B. Dole,** formerly a citizen of the United States, is elected president.

1895. In January, a royalist insurrection, inspired by the deposed Queen Liliuokalani, breaks out; a bloody engagement ends in the death of twelve insurgents and the capture of 500. Several of the leaders are condemned to death and 234 are banished. The death penalties are commuted to imprisonment for 20 years, and full pardon is subsequently granted. A standing army of 1,200 men is created.

1896. Peace is restored by the suppression of the royalist party, and the new republic gains a measure of favor with the native population. The national platform of the dominant political party in the United States declares in favor of the control of the Hawaiian Islands by the American government.

1897. In June, **President McKinley** sends to the Senate of the United States, from the Department of State, a **treaty** providing for the annexation of the Hawaiian Islands.

1898. President Dole visits the United States, and the project of annexation is revived. The treaty, after debate in the Senate, is dropped without reaching a vote. A **joint resolution** for annexation is brought forward; the influence of the President and the effect of the war with Spain are in its favor. This resolution, approved, June 15, by the House of Representatives by a vote of 209 to 91, and on July 6 by the Senate by vote of 42 to 21, receives the President's signature, July 7. Annexation is consummated.

For later events see United States Chronological Annals.

ALASKA.

Alaska is a vast tract 590,884 square miles in extent — more than the area of the original thirteen States — which was purchased from Russia by the United States in 1867 for $7,200,000. It is separated from the rest of the United States by British Columbia. The Island of Attoo — the most westerly of the Aleutian group, which prolongs Alaska into the Eastern hemisphere — is as many degrees of longitude west of San Francisco as San Francisco is west of Maine. Including the islands and its deeply indented shores, its coast line is 20,000 miles in length. The population was estimated at 33,426 in 1880, and at 63,592 in 1900. Alaska is an unorganized Territory, with a governor appointed by the President. The capital is Juneau. There are courts at several of the larger towns, as Nome, Juneau, Eagle City, Sitka, with commissioners exercising judicial functions elsewhere. The great coast range of mountains is from 50 to 75 miles in width, and includes Mount McKinley, 20,300 feet in height, the loftiest peak on the continent. It is the extension of this chain which forms the mountainous Aleutian Islands. One third of the Territory lies within the Arctic zone, and the slopes of the great range are covered with glaciers that afford magnificent scenery. The interior is said to contain grassy plains and groves of pines on the mountains. The Yukon River, which rises in British Columbia and flows through Alaska into the Pacific, is one of the great streams of the world, being navigable by steamers for 2,000 miles and having a width of a mile six hundred miles from its mouth. The climate of the coast and Pacific islands is moderated by the warm Japan current, which produces an immense rainfall. In the region of Sitka it rains or snows two days out of three throughout the year. At Sitka in midsummer there is no darkness, the sun dipping below the horizon and immediately rising again. East of the coast range the winter cold is intense, the thermometer falling to 70° below zero. The resources of Alaska consist chiefly of gold, fish, as the cod and salmon, and of the furs of its animals, especially of the fur seal. Reindeer have been introduced, so that at present there are over 12,000 in the Territory. It is possible to grow potatoes and other vegetables on the islands and along the western coast; hay and grain crops are grown in the southeast. The existence of gold in Alaska was long known, but it was not until 1897, when the Yukon placer region was discovered, that any considerable amount was mined. Since then extensive gold deposits have been developed in this region and at Nome,

and in 1907 the gold output of the Territory was $18,489,400. The long-standing boundary dispute between the American and Canadian governments was ended by the award of the Alaska Boundary Tribunal on October 20, 1903. This award was in the main favorable to the contention of the United States.

PORTO RICO.

Porto Rico was occupied by an American army in 1898 without very serious resistance, and its possession was confirmed to the United States by the Treaty of Paris in the following December. Its native name was Boringuen. The name of Puerto Rico (Rich Harbor) was substituted by the Spaniards. Columbus approached the coast in 1493. Ponce de Leon, who was governor in 1510, founded the towns of Caparra, now known as Puerto Viezo, and San Juan.

The Spaniards first subdued and then virtually exterminated the native population. Admiral Drake in 1595 sacked Caparra. Another English incursion was made three years afterward. Twice in the seventeenth century foreign powers attempted to wrest Porto Rico from Spain. Both were defeated, the Dutch in 1615, and the English in 1678. Sir Ralph Abercromby made a descent upon Porto Rico in 1795 and attacked the Castle of Morro but could not take it. On the downfall of the Spanish Bourbons, Porto Rico like Cuba remained faithful to the dethroned dynasty, though in 1820 an ineffectual attempt at independence was started by a faction of the people. After three years the Spanish authority was fully restored. Subsequently Porto Rico was ruled by a Spanish officer who oppressed the people and kept them in tyrannical subjection. Slavery prevailed until 1873, when it was abolished.

The area of the island is 3,435 square miles. It had 953,243 inhabitants in 1899, of whom 589,246 were white, 304,352 mulattoes, 59,390 full-blooded negroes and 75 Chinese. In 1904 the population had increased to 1,012,775. Two thirds of the people were engaged in agriculture and five sixths could neither read nor write. The American government organized a school system in 1899, endeavored to render education compulsory and required the local authorities to provide accommodations for pupils. But in 1907 there were only 60,287 scholars in average attendance at the 1,417 schools.

Two thirds of the cultivated land is devoted to sugar raising and a little more than one ninth to tobacco. Bananas, pineapples, oranges, and cotton are raised. Gold, silver, iron, copper, tin, mercury, platinum, and nickel are found, but there is little mining. A system of railroad connection has been begun but is far from complete.

The President appoints the governor and the executive council, numbering eleven, of whom six are heads of departments and five are natives. They serve four years. The thirty-five members of the House of Delegates are elected by the people to serve for two years. The Legislative Assembly is made up of the Council and the House of Delegates. In the former the language is English; in the latter, Spanish. Universal manhood suffrage prevails, subject to a slight educational test and small property qualification. The Constitution of the island was determined by Act of Congress on April 12, 1900, and was amended May 1, 1900, and again March 2, 1901.

THE SAMOAN ISLANDS.

In 1722 the Dutch Captain Roggeveen discovered the cluster of islands to which, forty-six years afterward, Antoine Bougainville gave the name Îles des Navigateurs, or Navigators' Islands. He was struck with the unequaled expertness of the natives in handling their canoes. He found the islanders to be gay, light-hearted, indolent people; remarkably good-looking; careless; rather quick-minded; devoted to agriculture and fishing; living under the easiest conditions of climate, in a group of volcanic islands, the surface of which had rolled down into a soil so rich and warm and damp as to bring a tropical exuberance of fruits and flowers.

In recent times the name of this group has been changed to the native word, Samoa. The cluster consists of fourteen islands in all, having a total area of 1,070 square miles. Only three of the group are important. These are Savaii, Upolu, and Tutuila. On the northern shore of the second named is the harbor of Apia, which, by the tripartite agreement of 1879, Germany, Great Britain, and the United States concurring, was declared to be an international port of entry, to be controlled by the consuls of the three powers named.

The situation of Samoa on the main lines of navigation between San Francisco and Auckland, Honolulu and Sydney, Queensland and Panama, Tokyo and Cape Horn, gives to the islands whatever historical interest they may claim. They are, though small, productive to a degree. The local products include copra (dried coconuts), coffee, cacao, and cotton.

Since the year 1868 several petty wars have occurred among the natives, and by these miniature conflicts the great nations of Christendom were at length drawn into threatening complications. Three or four native chiefs contended for the honor of being king. There were two dynasties: that of Malietoa and that of Tupua. In 1881, Great Britain, Germany and the United States agreed that the prince Laupepa should be king of all the islands and that the chieftain Tamasese should be vice king. Six years afterward, however, the German party at Apia, instigated by the Hamburg commercial house of Godeffroy and Son, gave the kingship to Tamasese alone; Laupepa they deported to the Kameruns.

The loyal party at once rebelled against Tamasese, and the chieftain Mataafa appeared for the exiled king. The Germans, worsted in 1888, proclaimed martial law. Then the other powers interfered, and in a conference at Berlin, in 1889, it was agreed that Samoa should be independent and neutral. The right to govern themselves, including the right to elect their king, was conceded to the Samoans, who promptly reëlected Laupepa. In the following year Apia, the capital of the country, was declared to be a municipal district under control of the consuls resident of the three powers.

In 1899, owing to trouble over the kingship, in which one English and two American officers were killed, the treaty powers started negotiations for a change of government; while these were in progress Great Britain, in exchange for other territory, ceded to Germany all her Samoan interests. Finally in 1900 it was agreed between Germany and the United States that the island of Tutuila and all other islands of the Samoan group east of 171° east of Greenwich should belong to the United States, while the islands west of that meridian should belong to Germany.

The harbor of Pagopago in Tutuila, one of the best ports in the Pacific, had been ceded to the United States as a naval and coaling station in 1872. The United States maintain a naval station there under a commandant who is also governor of the islands. The insular officers are appointed by him and he is maker of such regulations as he deems necessary. Still, the customs of the people are not interfered with, and they enjoy practical self-government.

The population in American Samoa numbers about 6,000, mostly pure Polynesians, all of whom have been Christianized by the missionaries.

THE PHILIPPINE ISLANDS.

The Philippine Islands, or, in Spanish, *Islas Filipinas*, in the last years of the nineteenth century acquired a historical importance greater than had been hitherto attached to them. While they had long been coveted by other European nations, they remained the Spanish outpost and naval base in the Pacific until the hold of Spain was broken by the destruction of her fleet and the capture of Manila in the war with the United States (1898).

The extensive archipelago designated as the Philippines was first visited by men of the white race in 1521. On the 12th of March in that year, Magellan, whose expedition was about to demonstrate the feasibility of circumnavigating the globe, reached the little island of Malhon, or Homonhon, near Samar. The next month after the discovery, Magellan was killed by the natives on the island of Mactan. He had conferred on the group the name of the Islands of St. Lazarus. Subsequently, they were called Islas de Porriente, and by the Portuguese, Islas de Oriente. In 1543, Villalobos, sailing from Mexico, reached the archipelago, and he it was who gave the name Isla Filipina to the island of Samar, in honor of Philip II. of Spain.

Subsequent explorations made better known the number and character of the islands. In 1565, San Miguel, in Cebu, afterwards called The Holy Name of Jesus, was founded by Legazpi. From this time the name of Philippines was used by the Spanish chroniclers. The conquest of the islands was effected in this period, but was not accompanied with the atrocities and cruel methods practiced by the Spaniards in the West Indies and South America.

In the year 1571, Manila, in the island of Luzon, the largest and most important member of the group, was chosen by Legazpi as the capital of the whole. A Spanish government was organized. A kind of civil authority was extended over the archipelago, including about 3,140 islands. Most of these are small, and many are uninhabited; others are large and important. Luzon, the largest, has 40,969 square miles, being over one third of the total land surface of the whole, which has been estimated, including the Sulu Islands, at 115,026 square miles. The other eight principal islands are Mindanao, Samar, Mindoro, Panay, Leyte, Negros, Masbate, and Cebu. All are of volcanic origin. In Luzon the mountains rise to the height of 7,000 feet. Owing to the prevailing moisture and warmth, the forests grow to the mountain tops.

The leading races of the Philippines are the Negritos, the Indonesians or non-Christian tribes, as the Igorrotes, Tinguianes, etc.; and the pure Malays, as the Tagalogs, Visayas, Bicols. There are also many types of mestizos. Of the first named, about 25,000 still remain. In course of time a large Malay population has come in, as also have considerable numbers of Chinese immigrants. The Spaniards are comparatively few in numbers, and these reside chiefly in Manila, Cavite, Batangas, and a few other towns. Negro slavery was never introduced into the islands, and hence the African element is wanting. According to the census of 1903 there was a population of 7,635,426, of whom 6,987,686 were accounted civilized. The capital, Manila, had 219,941 inhabitants.

The productions of the Philippines are abundant and valuable. The timber yield is extraordinary. The commercial woods include teak, ebony, cedar, gumwood, ironwood, sapanwood, etc. The breadfruit tree, the coconut, the orange, the citron, the mango grow luxuriantly and yield abundant fruits. The great staples are coffee, sugar, cotton, indigo, rice, wheat, corn, pepper, ginger, vanilla, cinnamon, cacao, etc. The mineral wealth includes gold, copper, cinnabar, iron, saltpeter, sulphur, coal, etc. Other sources of wealth are hemp and tobacco — the latter, together with the tobacco products, chiefly the cigars of Manila, being regarded by many as the finest in the world. The Bureau of Agriculture has done much in improving methods of cultivation and of rearing live stock and in combating the ravages of destructive insects.

The history of the Philippines has, until the most recent period, been marked with very few important events. The native tribes, and indeed the whole population, have always shown a disposition to rebel against the Spanish authority. The islands have been subject also to piratical attacks; for buccaneers find favorable nests in the remoter parts of the archipelago. Against these, the Spaniards were frequently obliged to make expeditions. To these troubles the calamity of earthquakes must be added.

The Philippines have, on the whole, been rarely involved in the political vicissitudes of Western Europe. The wars and conquests of Spain, France, and England have not usually extended in their consequences thus far into the East. Once, in 1762, an English armament under Draper and Cornish bore down on Manila and compelled the payment of $5,000,000 as a ransom. The city was held for nearly two years, but was restored according to the terms of the Treaty of Paris in 1763. At the outbreak of the war between Spain and the United States, in 1898, Commodore George Dewey, commanding the Pacific division of the American navy, attacked and destroyed the Spanish squadron under command of Admiral Montojo in the harbor of Manila, May 1, and blockaded Luzon. In June, a large division of the American army under General Merritt was sent from San Francisco across the Pacific to the assistance of Dewey in the siege of Manila, which was occupied by the Americans August 13.

By the Treaty of Paris, December 19, 1898, the Philippines were ceded by Spain to the United States, Spain receiving $20,000,000 for her outlays in the islands. The American government did not at that time desire their retention, but no other course seemed compatible with the responsibilities undertaken. A tedious struggle ensued with insurgent forces led by Emilio Aguinaldo, a young Filipino of Hispano-Tagal ancestry, who proclaimed himself dictator. Aguinaldo was captured, March 23, 1901, took the oath of allegiance on April 2, and resistance to American occupation gradually ceased, except for sporadic outbreaks of brigandage in the guise of insurrection.

William H. Taft was appointed first Civil Governor, July 4, 1901, and at present, except in parts of Mindanao and the Sulu Archipelago, all the islands are under civil government. The chief executive is the Governor-General. The legislative body consists of a commission, of four Americans and three Filipinos, constituting the upper house, and of a lower house or Assembly, elected by popular vote, and convened in its first session October 16, 1907. The executive departments are those of the Interior, Finance and Justice, Commerce and Police, and Public Instruction. For administrative purposes the islands are subdivided into thirty-six provinces, the governor of which, except in six provinces where the non-Christian tribes predominate, is elected by the people. In the non-Christian provinces he is named by the Governor-General with the consent of the Commission. As rapidly as possible local municipal government has been introduced. Through the islands a degree of self-government and political freedom is enjoyed, such as they have never before experienced.

The great work accomplished by the government for the benefit of the islands has an illustration in the solution of the "problem of the Friars' lands." During Spanish rule, immense estates, occupied by the peasantry, had been owned by religious orders from Spain who had become obnoxious to the Philippine Catholic clergy and people in general. This condition of affairs

caused continual strife and confusion. By act of Congress in July, 1902, the Philippine government was given authority to acquire by purchase the lands in question and to dispose of them by sale or lease. The preliminary negotiations at Rome and Manila were conducted by Governor, later President, William H. Taft. The solution reached was satisfactory to all parties concerned. In 1903–04 more than 410,000 acres were purchased at a cost of $7,239,000, which were to be sold or leased to their occupants.

The development of education since the American occupation has been remarkable. There are now more than 4,400 public schools, attended by over 615,000 pupils. In the night schools for adults are 25,000 more. English is taught in all these schools. Over 6,100 Filipinos and more than 800 American teachers of all grades are employed, to whom are paid salaries aggregating about $3,000,000. Industrial, commercial, and normal schools are being introduced. St. Thomas University at Manila is an institution for the higher education. About 8,000 miles of telegraph have been laid out and 190 miles of railroad. Under authority of the favoring act of Congress, February 6, 1905, additional lines of 720 miles are being constructed.

GUAM.

Guam, the largest of the Ladrone or Mariana islands, was captured by the United States in the Spanish-American war and ceded by Spain in the Treaty of Paris in 1898. The area is 210 square miles. The inhabitants number about 12,000 and are mostly of mixed races. Under Spain the island was neglected, but the American governor has endeavored to raise the condition of the people, introducing schools, laying out roads and encouraging agriculture. The island has been put in connection with the eastern telegraph system. Guam produces maize, rice, sugar, and copra. Taxes are paid in the latter. The harbor Agaña is good and is now being improved.

WAKE ISLAND.

Wake Island is a small isolated island, lying about ten degrees north of the equator on almost the direct line connecting Honolulu and Manila and not far from midway between the two. Its situation renders it of importance.

CHRONOLOGICAL ANNALS OF THE UNITED STATES.

1492. August 3, Columbus sails on his first voyage. On October 12, **Columbus lands on San Salvador.**
1493. Columbus makes his second voyage.
1497. June 24, John and Sebastian Cabot discover Labrador.
1498. Sebastian Cabot explores the coast of North America. Columbus makes his third voyage.
1499. Ojeda and Amerigo Vespucci reach the American continent.
1502. Columbus makes his fourth voyage.
1506. May 20, Columbus dies at Valladolid, Spain. Denys explores the Gulf of St. Lawrence.
1511. Spaniards conquer Cuba, and found a colony on the Isthmus of Darien.
1512. April 6, **Ponce de Leon discovers Florida.**
1513. September 29, Balboa discovers the Pacific Ocean.
1520. Carolina is visited by Vasquez de Ayllon. Magellan enters the Pacific Ocean, November 28, his fleet afterwards circumnavigating the globe.
1521. Cortes besieges and takes Mexico, May–August.
1528. Narvaez explores part of Florida.
1540. Coronado explores New Mexico.
1540–1542. Cabrillo explores California, and sails along the Pacific coast.
1541. **De Soto discovers the Mississippi.**
1562. Coligni's Huguenot colony is founded by Ribaut at Port Royal, S. C. (fails).
1564. Coligni's second Huguenot colony is founded by Laudonnière on St. Johns River, Florida (destroyed by the Spaniards in 1565).
1565. Menendez founds St. Augustine, Fla. (first permanent European settlement in the U. S.).
1578–1580. **Sir Francis Drake** sails along the Pacific coast to Oregon, and circumnavigates the globe.
1582. Espejo explores New Mexico; founds an Indian village on the present site of Santa Fe.
1583. Sir Humphrey Gilbert attempts to found a colony in Newfoundland (fails).
1584. Sir W. Raleigh sends out Amidas and Barlow, who explore Pamlico and Albemarle sounds.
1585–1587. **Raleigh** sends out **colonists** who **attempt a settlement** on **Roanoke Island,** N. C. (**fails**).
1602. May 25, Gosnold lands on Cape Cod and names it. First attempt at English colonization on the shores of New England, at Cuttyhunk (fails).
1605. De Monts' colony, Port Royal, Nova Scotia (first permanent French settlement in America).
1607. Chief Justice Popham sends out a colony to the mouth of the Sagadahoc (fails). May 13, Jamestown, Va., founded by the London Company (first permanent English settlement).
1608. Champlain plants a colony at Quebec (first permanent French settlement in Canada).
1609. September, **Henry Hudson** enters New York Bay and **discovers** the **Hudson River.**
1614. Captain John Smith explores the New England coast.
Dutch settle New Amsterdam (New York).
1615. Tobacco is first planted by foreigners in Virginia.
1617–1620. Dutch begin to colonize New Jersey at Bergen.
1619. First colonial assembly in America is held July 30 at Jamestown, Va. A Dutch vessel brings 20 negroes to Virginia, who are sold as slaves.
1620. December 21, **Plymouth colony** (Mass.) is founded by English Pilgrims, coming in the *Mayflower* (first English settlement in New England).
March 22, massacre by Indians in Virginia.
1622. August 10, a tract of land including New Hampshire is granted to Gorges and Mason.
1623. New Hampshire is settled at Dover and Portsmouth.
1624. Virginia is deprived of her charter by James I., and made a royal province.
1628. **Massachusetts Bay colony** is chartered, March 4.
1629. John Mason is granted the tract between the Merrimac and Piscataqua rivers, and names it New Hampshire.
1630. First house is built in Boston, in July.
1632. June 20, Maryland is granted to Lord Baltimore.
1633–1636. Connecticut is settled at Windsor, Hartford, and Wethersfield.
1634. In March, Maryland is settled at St. Mary's by English Roman Catholics.
1636. Harvard College is founded. In June, Providence Plantation (R. I.) is founded by Roger Williams.
1637. Pequot war.
1638. April 25, **New Haven colony (Conn.)** is founded.
In April, Swedes settle in Delaware, near Wilmington.
Rhode Island Plantation is founded.
1643. May 29, union of the New England Colonies.
1644. March 14, charter is granted to Rhode Island, uniting Rhode Island and Providence Plantations.
April 18, second massacre by Indians in Virginia.
1655. Civil war in Maryland.
October, New Sweden is conquered by the Dutch.
1660. Navigation Act (passed in 1651) is enforced.
1662. April 20, Connecticut is given a charter.
1663. Carolina is granted by Charles II. to Clarendon, Monk, and others.
Albemarle colony (N. C.) is founded by emigrants from Virginia, March 24.
1664. In September, New Netherland is conquered by the English, and named New York. English begin colonizing New Jersey at Elizabethtown.
1670. Carteret County, on Ashley River, N. C., is settled by French Huguenots and English.
1673. Marquette sails down the Wisconsin and Mississippi to the mouth of the Arkansas.
1675–1676. **King Philip's war.**
1676. Bacon's rebellion in Virginia against the government of Sir William Berkeley; Jamestown, Va., burned.
1679. New Hampshire is made a royal province.
1680. Charleston, S. C., is founded.
1681. Pennsylvania is granted to William Penn, March 4.
1682. **Pennsylvania** is **settled** by English Quakers.
La Salle descends the Mississippi to the Gulf of Mexico.
Delaware is granted to William Penn by the Duke of York on August 31.
1683. Philadelphia is founded by William Penn in February.
1686. On December 20, Sir Edmund Andros reaches Boston, as governor of New England.
1689. **King William's war** with France is declared, May 17. Andros is seized and sent to England.
1690. February 9, Schenectady is burned by French and Indians.
1692. Salem witchcraft trials. 19 are hanged; 8 others condemned.
Massachusetts receives a new charter, Sir William Phips being appointed governor.
1693. The College of William and Mary is founded at Williamsburg, Va.
1697. September 20, Peace of Ryswick, ending King William's war.
1701. Yale College founded at Saybrook, Conn.
1703. Independent legislative assembly in Delaware.
Queen Anne's war begins.

December 1, principal of national debt, $2,429,370,043.54; reserve fund and cash in treasury, $1,606,369,796.41.
President's message, December 4, deals largely with relations between capital and labor, the advisability of a graduated inheritance tax on large fortunes, greater governmental control over interstate commerce and corporations engaged in it, and the attitude of California towards the Japanese.
Nobel peace prize of about $40,000 is awarded, on December 10, by Norwegian Storthing to **President Roosevelt** for his services in bringing about end of Russo-Japanese war. President founds with the money a permanent Industrial Peace Commission at Washington to deal with labor controversies.
President urges upon Congress, December 11, the admission of the Porto Ricans to citizenship.

1906. Appointments announced, Dec. 12: W. H. Moody to the Supreme Court; Charles J. Bonaparte to be Attorney-General; Victor H. Metcalf to be Secretary of the Navy; Oscar S. Straus to be Secretary of Commerce and Labor.
Algeciras Treaty as to Morocco is ratified, December 12, Senate declaring that it furnishes no precedent for interference of United States in European differences.
Rear-end collision, December 30, on Baltimore and Ohio Railroad at Terra Cotta, near Washington, kills fifty-three and injures many.
Immigration, 1,100,735. Imports, $1,418,279,187. Exports, $1,848,307,154.
The year **in the Philippines** is for the most part uneventful. On January 19, Henry C. Ide is appointed governor, to succeed Luke E. Wright, and on September 20 General James F. Smith is appointed to succeed Governor Ide.
1907. 539 **indictments against the Standard Oil Company** for accepting unlawful rebates are returned by a grand jury in Ohio, January 14.
Secretary of State Root visits Earl Grey at Ottawa, Canada, January 17.
Salaries of Senators and Representatives increased, January 24, to $7,500 and of Vice President, Speaker of House, and members of Cabinet to $12,000.
The United States enters suits, January 24, in San Francisco to test the right of California school authorities to exclude Japanese from the general public schools, in alleged contravention of treaty rights.
John D. Rockefeller gives $32,000,000 to the General Education Board.
Steamer *Larchmont* sinks after collision near Block Island, February 12. More than 150 lives lost
The Senate, on February 20, refuses by a vote of 42 to 28 to unseat Reed Smoot, Mormon senator from Utah.
The Engineer Corps of the army is put in charge of the construction of the Panama canal, February 26. Major G. W. Goethals becomes chief engineer in place of John F. Stevens, resigned. Private bids rejected.
Centennial of birth of Henry Wadsworth Longfellow is celebrated, Feb. 27.
On March 4, fifty-ninth Congress adjourns. 17,400,000 acres in Northwestern States added to the national forest reserves. George von L. Meyer is sworn in as Postmaster-General and George B. Cortelyou as Secretary of the Treasury.
Mrs. Russell Sage, on March 12, endows with $10,000,000 the "Sage Foundation" for the investigation of distress among the poor.
The President, on March 16, appoints a commission to examine plans for extending and improving internal commercial waterways.
On March 22, census shows that the wealth of the United States exceeds $107,000,000,000.
The Supreme Court, on April 8, decides that Isle of Pines belongs to Cuba.
April 13, the Standard Oil Company of Indiana is found guilty of accepting rebates on 1,462 counts, at Chicago. On August 3, Judge K. M. Landis, in the United States District Court at Chicago, fines the Company $29,240,000 on its conviction. (See July 22, 1908.)
First national Arbitration and Peace Congress opens in New York, April 14.
President Roosevelt opens **Jamestown Exposition,** April 26. Great naval parade in Hampton Roads.
A street railroad strike becomes general **in San Francisco,** May 5. Much rioting and many deaths follow.
Wheat is quoted at more than $1 a bushel, May 13.
New York Legislature, on May 22, establishes a Public Utilities Commission to exercise control over public service corporations.
June 10, President Roosevelt, at Jamestown Exposition, recommends inheritance and income taxes, and also legislation imposing upon employers liability for injuries to employees, regardless of negligence.
June–July–August, a sharp conflict occurs between the Federal courts and State courts and authorities in North Carolina arising out of State legislation regulating railroad rates. Yielding by the railroads prevents a decision of the issues.
July 28, William D. Haywood, secretary of the Western Federation of Miners, is acquitted at Boisé, Idaho, of the charge of being an accessory to the murder of ex-Governor Steunenberg of Idaho.
August 2, Alabama revokes the license of the Southern Railway.
Strike of telegraph operators, on August 9, is extended to many large cities.
Secretary of War Taft starts, August 18, on a trip to the Philippines, Japan, and around the world.
Oklahoma votes, September 17, to ratify the Constitution of the new State. C. N. Haskell, Democrat, is elected governor.
The first car is run through the **Belmont tunnel under the East River** at New York, September 23.
Secretary of State Root leaves, September 25, for a visit to Mexico, where he is the personal guest of President Diaz.
President Roosevelt leaves Washington, September 29, for a trip through the South, largely in the interests of improving inland waterways.
President Roosevelt, on October 4, addresses the Waterways Convention at Memphis. On October 5, the Convention asks for a national appropriation for a fourteen-foot channel from the Lakes to the Gulf.
The directors of the Mercantile National Bank in New York City resign, October 18, on account of scandals connecting some of them with the affairs of a copper brokerage company. Investigations, started in this connection, of other banks and trust companies precipitate a run on several of these institutions, and **one of the worst financial panics** New York has seen follows. On October 19, the Knickerbocker Trust Company suspends payments. The Trust Company of America and the Lincoln Trust Company withstand runs of almost unprecedented proportions. Many small banks suspend. Prices of stocks and bonds fall in many cases to low records. Throughout the country a severe money stringency follows, and clearing house certificates and obligations of private companies come into use in many cities.
Strike of telegraph operators ends October 20.
November 1, principal of national debt, $2,492,231,518.54; reserve fund and cash in treasury, $1,758,283,122.90.
The new union railroad station in Washington, D. C., costing more than $4,000,000, is opened to traffic, November 17.
In accordance with the plan for an extended **cruise of** the Atlantic fleet, six torpedo boat destroyers sail from Norfolk, Va., Friday, December 10, 1907, for the Pacific coast. On December 16 they are followed by the **battleship fleet** of sixteen first-class battleships under Rear Admiral Robley D. Evans. On January 12, 1908, the fleet reaches Rio Janeiro and is warmly received. It leaves there January 22, escorted by the Brazilian warships. On January 31, it reaches the Straits of Magellan, Valparaiso on February 14, Callao on February 20, and on March 12 arrives at Magdalena Bay two days ahead of schedule time. Here extended naval maneuvers and target practice take place. On April 14, the fleet arrives at San Diego and on May 6 arrives at San Francisco where a grand review of the combined Atlantic and Pacific fleets is held by the Secretary of the Navy. On May 19, Admiral Charles S. Sperry succeeds Admiral Evans in command of the Atlantic fleet. On July 7 this fleet leaves San Francisco for Honolulu, which it reaches on July 16. On July 22 it sails for New Zealand and is greeted with a splendid welcome at Auckland on August 8. On August 19 the fleet arrives at Sydney, New South Wales, and at Melbourne on August 31, and Albany on September 10. Magnificent welcomes are extended to it. On October 2 Manila is reached. On October 17 the fleet arrives at Yokohama and is magnificently entertained. It returns to Manila, where the battleship *Nebraska* on November 18 beats all records for accuracy of gun fire. The fleet leaves Manila on November 30, reaches Singapore December 6, Colombo, Ceylon, December 13. The homeward trip is made through the Suez Canal and the cruise around the world ends on February 20, 1909, at Hampton Roads. Here on February 22 it passes in review before the President.
United States troops are, December 5, ordered to Goldfield, Nevada, where trouble is feared between striking miners belonging to the Western Federation of Miners and the mine owners.
An explosion in a coal mine, December 6, near Monongah, W. Va., entombs several hundred miners.
National Geographic Society, December 14, awards the Hubbard Medal to Captain Roal Amundsen, "the first to sail through the Northwest Passage."
Explosion in coal mine at Jacob's Creek, Pa., costs about 200 lives, Dec. 19.
Immigration, 1,285,349. Imports, $1,434,421,425. Exports, $1,880,851,078.
The year is one of general prosperity for the first nine months, although securities as a rule show marked declines in market prices. In October (see October 18) the **New York panic** is **reflected** in financial circles **throughout** the **country.**
The year in the Philippines is marked chiefly by the meeting of the first Filipino Assembly. The elections are held without serious disturbance on July 30, resulting in a majority for the "Nationalista" party. On October 16, the assembly is opened, Secretary of War Taft making a notable address. Señor Osmena is elected Speaker.
1908. The **subway tunnel under the East River** from Manhattan to Brooklyn is opened to traffic, January 4.
The federal Employers' Liability Law is declared unconstitutional by the Supreme Court, January 6.
In Boyertown, Pa., panic follows fire in a theater, January 13, nearly 180 being killed or fatally injured.
The Senate, on January 15, passes joint resolutions to remit to China approximately $13,000,000 of the indemnity awarded this country for the Boxer outrages.
The Supreme Court, on January 27, declares unconstitutional the law prohibiting discrimination against labor unions by common carriers.
The government, on February 1, begins suit at Salt Lake City against the Harriman lines, charging restraint of trade.
The **Supreme Court,** on February 3, **declares a trades-union boycott against a manufacturer doing an interstate business an illegal** combination in restraint of trade.
On the resignation of John Mitchell, T. L. Lewis is elected president of the United Mine Workers of America, February 3.
An Arbitration treaty between the United States and France is signed, February 10, and later ratified by the Senate.
The first tunnel under the Hudson River, between Hoboken and New York, is opened February 25.
The total excavation in construction of the Panama Canal, on March 1, amounts to 28,414,934 cubic yards, about one fifth of the whole.
At Collingwood, Ohio, 167 children are burned to death in a schoolhouse, March 4.
President Roosevelt, on March 11, sends message to Senate concerning reinstatement of Brownsville soldiers "who could prove their innocence."
It is announced, March 13, that Andover Theological Seminary will be removed to Cambridge and will affiliate with Harvard.
The House passes bill, March 16, restoring to the coinage the motto "In God We Trust." It passes the Senate on May 15.
In a general strike, 250,000 coal miners quit work, March 31.
Mr. Carnegie, on April 3, adds $5,000,000 to the fund for the Advancement of Teaching, so that State Universities may profit by the pension system.
The National Populist Convention, on April 3, at St. Louis, nominates Thomas E. Watson, of Georgia, for president.
The President, in a special message to Congress, April 9, asks for further legislation against anarchism.
Treaties with Great Britain are signed at Washington, April 11, further delimiting the Northwest Canadian boundary and the fishing rights on the Great Lakes.
Fire at Chelsea, Mass., April 12, kills and injures many persons and destroys $6,000,000 of property.
The government makes representations to Great Britain, April 13, regarding the seizure of American fishing vessels on the coasts of Newfoundland.
The coal miners and operators reach an agreement, April 17, ending the strike and causing the resumption of work.
The Senate, on April 17, passes the bill providing that federal injunctions against the enforcement of State laws shall be issued by not less than two or three federal judges.
The Senate Committee on Foreign Affairs, on April 18, passes a resolution empowering the President to deal with certain matters regarding Venezuela.
The Senate, on April 23, approves appropriation of $7,000,000 for work on the new battleships.
Tornadoes on the coast of the Gulf States kill and injure more than 1,500 persons and destroy much property, April 24.
In New York City the celebration begins on April 26 of the centennial of the establishment of the Roman Catholic Diocese of New York.
The Pennsylvania Railroad Company issues bids for a $40,000,000 loan, April 27. It is oversubscribed twenty times.
The corner stone of the building for the Bureau of American Republics is laid in Washington, May 11.
Forty-four States are represented at the **Conference** of Governors, May 13, called at the White House **for** the **conservation of natural resources.**
$1,500,000 are appropriated, May 19, for the exhibit of the United States at the Tokyo exhibition in 1912.
Expiration of first session of the Sixtieth Congress, May 30.
President, on June 8, appoints a national commission of fifty-seven members on the conservation of the forests and other national resources.
The anti-race-track gambling bills are passed by the Senate of New York, June 11.
For the first time elaborate tests of submarine torpedoes against a heavily armored vessel are made, June 13, the monitor *Florida* being the target. The hull is badly opened, but the monitor is kept afloat by its water-tight compartments.

1908. **Governor Wilson of Kentucky,** on June 13, **pardons** James **Howard** (suffering imprisonment for life) **and** Caleb **Powers** (under indictment and three times tried), who were charged with having been accessories in the murder of Governor Goebel in 1900.
William Howard Taft, of Ohio, is nominated for president by the National Republican Convention at Chicago, June 18.
James Schoolcraft Sherman is nominated for the vice presidency June 19.
Mr. Taft resigns, June 19, as Secretary of War, and Luke E. Wright is named as his successor, taking office on July 1.
Louisiana Legislature passes bill, June 23, prohibiting race-track gambling.
Ex-President Cleveland dies at Princeton, N. J., June 24.
The government fiscal year closes June 30, with a deficit of $60,000,000.
The *Roosevelt*, commanded by Robert E. Peary, sails from New York, July 6, in endeavor to reach the pole.
Successful wireless telephone test between New York and Newark, July 9.
The National Democratic Convention in Denver, Col., on July 10, nominates William Jennings Bryan, of Nebraska, for the presidency, and John Worth Kern, of Indiana, for the vice presidency.
The National Prohibition Convention at Columbus, Ohio, on July 16, nominates E. W. Chafin and A. S. Watkins for president and vice president.
The United States Circuit Court of Appeals at Chicago, July 22, reverses the conviction of the Standard Oil Company in the case in which a fine of $29,400,000 was imposed by Judge Landis. (See April 13, 1907.)
At Chicago, the Independence League, on July 28, nominates Thomas L. Hisgen and John T. Graves for the presidency and vice presidency.
Race riots August 14–15, in Springfield, Ill. Suppressed by militia.
The Army Board accepts Captain Baldwin's dirigible balloon, August 17.
Mr. Taft announces, August 22, that if elected he will call an extra session of Congress for revision of the tariff.
Forest fires in Minnesota, Wisconsin, and Michigan throughout **September and October** do enormous damage, and destroy several small towns.
Orville Wright, on September 10 and 12, breaks all records for heavier-than-air flying machines, remaining in the air one hour and fourteen minutes.
The United States Circuit Court of Pennsylvania, Sept. 10, declares certain clauses of the Hepburn Act affecting coal roads to be unconstitutional.
Orville Wright is severely injured, and Lieut. Selfridge is killed, September 17, in accident to Wright's aeroplane at Fort Meyer, Va.
Two-cent letter postage with Great Britain goes into effect, October 1.
New arbitration treaty with China is signed at Washington, October 8.
William H. Taft is elected president, November 3, securing 321 votes in the Electoral College, to 162 for William J. Bryan. Popular vote: Taft, Republican, 7,637,676; Bryan, Democrat, 6,393,182; Debs, Socialist, 448,453; Chafin, Prohibition, 241,252; Hisgen, Independence League, 83,183; Watson, Populist, 33,871; Gillhaus, Socialist Labor, 15,421.
The Sixty-first Congress will be composed as follows: Senate, Republicans, 60; Democrats, 32; House, Republicans, 219; Democrats, 172.
The Ways and Means Committee of the House opens an exhaustive hearing on the Tariff, November 10.
The *North Dakota*, the largest of the new battleships to this date, is launched at Quincy, Mass., November 10.
Francis J. Heney, special prosecutor in the San Francisco graft cases, is shot, November 13, during the trial. He recovers.
A monument is dedicated at Brooklyn, November 14, to the prison-ship martyrs of the Revolution, President-elect Taft delivering the address.
The American Federation of Labor, on November 19, rejects a proposition to disregard writs of injunction. On November 21, Samuel Gompers is re-elected president of the Federation.
The Chinese High Commissioner, Tang Shao Yi, attended by the Royal Prince Tsai Fu and a suite of fifty persons, arrives at San Francisco, November 22, on his way to Washington to express to the American government the gratitude of China for remitting nearly $13,000,000 of the Boxer indemnity.
Mr. Root, Secretary of State, and Mr. Takahira, Japanese Ambassador at Washington, on November 28, exchange notes declaring the peaceful intention of their respective countries.
The second session of the Sixtieth Congress opens, December 7.
Abraham Ruef, of San Francisco, is found guilty of extortion, December 10. He is sentenced to 14 years' imprisonment, but appeals.
The United States Court at New York gives decision in the case against the Tobacco Trust, December 15
Supreme Court of the District of Columbia, on December 23, sentences Messrs. Gompers, Mitchell, and Morrison, president, vice president, and secretary of the American Federation of Labor, to terms in jail for violating an injunction against boycott of a stove company. Appealed.
Announcement is made, December 27, in Washington, of a Conference to be held on February 18, 1909, by representatives of Canada, Mexico, and the United States, for the conservation of the natural resources of North America.
Immigration, 782,870. Imports, $1,194,341,792. Exports, $1,860,773,346.
The overshadowing feature of the year is **the presidential election.** The recovery from the effects of the panic of 1907 progresses in general steadily though not rapidly. A feeling of restored confidence is evident. In the Philippines, railway building is pushed, an agricultural bank is founded by the Commission, and general tranquillity prevails through the islands.

1909. Steamship *Republic* collides with Italian steamship *Florida* off Nantucket Lightship, January 23. By wireless messages the shore is notified and vessels are summoned. Passengers and crew of the *Republic* are transferred to *Florida* and later to *Baltic*. *Republic* later sinks while being towed.
Elihu Root resigns as Secretary of State, January 25. Robert Bacon of New York is nominated to succeed him
The **Newfoundland fisheries treaty** is **signed** at Washington, January 27. Later it is approved by the Newfoundland government under Sir Robert Bond, which, on February 25, resigns because of popular disapproval.
Supreme Court renders a decision, February 1, declaring in effect that a trust operating in violation of law cannot sue in the federal courts to recover a debt incurred in the course of such illegal operations.
California Assembly, on February 4, passes a bill segregating Asiatic children in schools. Remonstrances from President Roosevelt and widespread protest cause the abandonment of the measure.
U. S. S. *Delaware*, the first of the so-called *Dreadnought* class of battleships in the U. S. Navy, is launched at Newport News, February 6.
February 12, the one-hundredth anniversary of the birth of Abraham Lincoln, is widely observed. The President lays the corner stone of a memorial building at Lincoln's birthplace near Hodgenville, Ky.
Bench warrants are issued, February 17, by Federal Court in District of Washington against the New York *World* and Indianapolis *News* for criminal libel of W. N. Cromwell, Douglas Robinson and others in connection with the purchase of the Panama Canal from the French company.
The President, on February 17, submits to Congress the favorable report of the engineers sent to investigate the Panama Canal.
A review of the battleship fleet after its return from its world cruise (see entry at December 1, 1907) is held, February 22, by the President.
On March 3, President's salary increased by Congress to $75,000 a year.
Sixtieth Congress ends, March 4. The Senate of the Sixty-first Congress is called to order and new members are sworn. President Taft and Vice President Sherman are inaugurated in very stormy weather. The new cabinet takes office, as follows: Secretary of State, Philander C. Knox, Pa.; of the Treasury, Franklin MacVeagh, Ill.; of War, Jacob M. Dickinson, Tenn.; Attorney-General, George W. Wickersham, N. Y.; Postmaster-General, Frank H. Hitchcock, Mass.; Secretary of the Navy, George von L. Meyer, Mass.; of the Interior, Richard A. Ballinger, Wash.; of Agriculture, James Wilson, Iowa; of Commerce and Labor, Charles Nagel, Mo.
In Chicago federal court the Standard Oil Company of Indiana, on March 10, is found not guilty of accepting rebates from the Chicago and Alton Railroad.
Detective Joseph Petrosino of the New York police department is murdered in Palermo, Italy, March 13, while investigating the so-called "Black Hand" organizations of Italian criminals in the United States.
The Sixty-first Congress meets in special session, March 15. Joseph G. Cannon of Illinois is elected Speaker of the House of Representatives.
President urges on Congress, March 16, a thorough revision of the tariff.
At Nashville, Tenn., March 20, Col. Duncan G. Cooper and Robin Cooper are found guilty of murder in the second degree for killing ex-Senator E. W. Carmack, and sentenced to twenty years' imprisonment. Both appeal.
The system of **leasing convicts in Georgia comes to an end** by law, March 21, and more than 1,200 convicts are returned to county prisons.
Theodore Roosevelt sails, March 23, for a hunting expedition in Africa.
By order of President Taft, March 26, the marine corps is again allotted sea duty on war vessels.
The Queen's Borough bridge between Manhattan and the former Long-Island City (now borough of Queens), New York City, is formally opened, March 30.
Gov. Wilson of Kentucky, on April 23, **pardons ex-Gov.** William S. **Taylor,** under indictment for the murder of Gov. Goebel in 1900.
The Supreme Court renders a decision, May 3, upholding the constitutionality of the so-called "commodities clause" of the interstate commerce laws prohibiting transportation companies from carrying products owned by them, but modifying its supposed effect by intimating that such companies may transport goods produced by companies in which they own stock.
Supreme Court renders decision, May 24, holding the sheriff and five residents of Hamilton County, Tenn., guilty of contempt of court for conspiring to lynch a negro convict after the Supreme Court had granted an appeal.
During May a strike of the white firemen on the Georgia Railroad almost paralyzes traffic and causes intense local feeling. The issue is the hiring of negro firemen, partly in place of discharged white firemen. On May 31, the company and strikers agree to submit the difficulty to arbitration.
The **Alaska-Yukon-Pacific** exposition opens at **Seattle,** June 1.
On June 10, President Taft presents to Wilbur and Orville Wright at the White House the gold medals struck for them by the Aero Club of America, for their achievements with heavier-than-air flying machines. Previously the Wright brothers had been similarly honored by many foreign bodies, notably on May 3 by the Aeronautical Society in London.
June 16, President Taft recommends a 2% tax on net income of corporations, and the submission to the States of a Constitutional amendment permitting the Federal Government to levy and collect an income tax without apportionment among the States according to population. June 16, the Supreme Court of Illinois declares the primary election law unconstitutional.
June 24, the Attorney-General of the United States orders the Government's suit against the New York, New Haven and Hartford, the Boston and Maine, and other railroads for violating the anti-trust law to be dismissed.
July 5, by unanimous vote the Senate adopts a resolution submitting to the States a constitutional amendment providing for an **income tax.**
July 5, Norwich, Conn., celebrates the two hundred and fiftieth anniversary of its foundation, President Taft delivering an address.
July 5–9, tercentennial celebration of the discovery of Lake Champlain.
On July 9, it is announced that John D. Rockefeller has given $10,000,000 to the General Education Board.
The Pennsylvania Railroad tunnels to New York City under the Hudson River are declared completed on July 10.
On July 12, the House adopts the joint resolution formerly adopted by the Senate providing for the submission to the legislatures of the States of an **income tax amendment** to the Constitution.
On August 5, the Senate passes the **Aldrich-Payne tariff** bill.
On August 27, a national Congress on the Conservation of Natural Resources meets at Seattle, thirty-eight States being represented.
News is received on September 1 from Dr. Frederick A. Cook, claiming that he reached the North Pole, April 21, 1908. He is later discredited.
On September 6, news is received from **Commander Robert E. Peary** that he **reached the North Pole** on April 6, 1909.
On September 15, President Taft starts on an extended tour of the country.
The Gunnison irrigation tunnel is opened by President Taft on September 23. A celebration in commemoration of Henry Hudson's discovery of the Hudson River and of Robert Fulton's invention and construction of the steamboat "Clermont" is held in New York City and along the Hudson River from September 25 to October 9. Many foreign war vessels participate.
President Taft and President Diaz, of Mexico, on October 16, exchange visits at El Paso, Texas, and Ciudad Juárez, Mexico.
Associate Justice Rufus W. Peckham of the U. S. Supreme Court dies on October 24. Judge Horace H. Lurton of Tennessee succeeds him.
November 2, W. J. Gaynor elected mayor of New York City. Other Tammany Hall candidates defeated.
On November 20, the Standard Oil Company of New Jersey (the great holding company) is declared illegal and ordered to dissolve by the United States Circuit Court in the District of Missouri.
On December 31, the Manhattan Bridge between Manhattan and Brooklyn boroughs, New York City, is formally opened.
Immigration 751,786. Imports $1,311,920,224. Exports $1,663,011,104.
The year was one of general and increasing prosperity. The return of commercial confidence and enterprise was marked. Great frauds in the Custom House in the matter of imports, especially of sugar, were discovered. Millions of dollars were recovered as unpaid balances of duties from several large sugar companies, and many employees, both of the companies and the government, were indicted. There were, however, fewer commercial scandals, and a general belief in the substantial soundness of business morality was strong.
In the Philippines, the year was one of quiet progress. On November 24, **W. Cameron Forbes,** of Massachusetts, was inaugurated as Governor General.

AERIAL LOCOMOTION.

GLIDING MACHINES. AËROPLANES. AIRSHIPS.

1. Otto Lilienthal's GLIDING MACHINE. Distance traversed, several hundred feet.
2. Octave Chanute's GLIDING MACHINE. Longest flight, 359 feet.
3. Sir Hiram Maxim's STEAM FLYING MACHINE.
4. Wright Brothers' (Orville and Wilbur) AËROPLANE. Warpable two-plane class. Supporting surface, 500 square feet. Weight, 800 pounds. 30-horse-power motor. Double-surface horizontal rudder mounted in front with small vertical rudder at its central point. Twin vertical rudders at rear for side steering. Two propellers at rear of main planes. Wooden skids. Met requirements of U. S. A. Signal Corps, July 27th and 30th, 1909: flight, with a passenger, of 1 hour, 12 minutes, 26 seconds, and a speed of 10 miles in 14 minutes and 12 seconds.
5. Louis Bleriot's MONOPLANE. Single supporting surface of 150 square feet. Mounted on wheels. Weight, 661 pounds. The first aëroplane to cross the English Channel. Time, 37 minutes.
6. Henry Farman's AËROPLANE. Two rigid parallel planes with a box-shaped tail. 50-horse-power engine. Won Archdeacon prize by sailing a kilometer in a circle.
7. Melvin Vaniman's TRIPLANE. Three decks. Vertical and horizontal rudders in front. Movable wing tips and stabilizing tail. Steel-tubing frame.
8. ANTOINETTE. A type of monoplane.
9. DIRIGIBLE AIRSHIP, "Signal Corps Dirigible No. 1." Built by Capt. Thomas L. Baldwin. 90 feet long. Weight, 1350 pounds. One propeller at front end. 20-horse-power motor. Trial-trip speed, over 19 miles an hour.
10. Paul Cornu's HELICOPTER. Characteristic, a lifting propeller. Weight, 30½ pounds. Rose one foot on March 25, 1908.
11. Alberto Santos-Dumont's MONOPLANE, "Demoiselle." Remarkable for its small size. Spread of wings, 16 feet. Supporting surface, 113 square feet. Driven by 24-horse-power motor.
12. Glenn H. Curtiss's AËROPLANE, "June Bug." Won Scientific American trophy of $2500 on July 4, 1908. Distance, over a mile in a straight line. Speed, nearly 40 miles an hour.
13. Alberto Santos-Dumont's DIRIGIBLE AIRSHIP. First gas bag to support a motor.
14. RIGID AIRSHIP, "Zeppelin II." Built by Count Ferdinand von Zeppelin. 446 feet long. Lifting power, about 16 tons. Two 110-horse-power motors. Aluminium frame. Divided into seventeen vertical air-tight compartments. On May 29th-31st, 1909, it traveled 850 miles in 36 hours.
15. DIRIGIBLE AIRSHIP, "Gross." Type of semicollapsible German military airship. Approximate speed, 30 miles an hour.
16. FRENCH WAR AIRSHIP, "La Russe." Semicollapsible type.

PART IV. — RECENT HISTORY.

BEGINNING WITH THE YEAR 1910.

ABYSSINIA.

1913. *Dec. 22.* **Death of Emperor Menelik II.** is officially announced in Adis Abeba, the capital. Reports of his decease have circulated periodically since his paralytic seizure in 1908. He is succeeded by his grandson Lij Yasu.

AFGHANISTAN.

1912. *In August.* The rebellion of the Khost tribesmen ends, the demands of the rebels being conceded; taxes are reduced and forced labor is prohibited.

ALBANIA.

1913. *May 30.* **Independence of Albania** is declared at the Conference of London, its status being left to the powers. For previous history, see TURKEY, MONTENEGRO.

Sept. 28. International Commission of Control, consisting of six members, representing Austria-Hungary, Italy, France, Germany, Russia, and Great Britain, is established at Avlona.

Nov. 23. Selection by the European powers of **Prince William of Wied** as the future sovereign is officially notified to the provisional government.

In December. The southern frontier of Albania is determined, and approved by the powers.

1914. *Feb. 21.* Prince William of Wied accedes to the Albanian throne, adequate financial support by the powers being guaranteed.

In May. **Essad Pasha,** late minister of war, heads an uprising. International marines land at Durazzo, and he is arrested and banished May 20. This action still further disaffects the Turkish element. Northern Epirus is in a state of anarchy, owing to popular objection to inclusion in Albania. In the north, various bands of insurgents take advantage of the helplessness of the government. Prince William seeks refuge on an Italian warship.

Sept. 3. **Prince William announces his abdication** of the throne. International Commission of Control takes over the government of Durazzo.

Oct. 4. Essad Pasha reënters Albania in force and assumes control of the government.

Oct. 26. Italian naval force occupies Avlona, center of the Turkish influence in Albania.

Dec. 25. Violent revolutionary movement breaks out against Essad Pasha.

THE ARGENTINE REPUBLIC.

1910. *Jan. 18.* Two battleships of the *Dreadnought* type, of 28,000 tons each, are ordered by the government.

March 13. Dr. Roque Sáenz Peña is elected president.

In May. **Centenary of independence** is celebrated.

July–August. At Fourth Pan-American Congress, at Buenos Aires, it is agreed that all **money claims** not amicably determined by diplomacy shall be **settled by arbitration.**

In September. **Trans-Andean railway** between northern Argentina and Chile is authorized by Congress.

1911. *April 26.* Disastrous floods at Buenos Aires render thousands homeless.

In June. Congress authorizes a loan of $70,000,000 for schools, colleges, and federal offices.

Aug. 26. The *Rivadavia* (28,000 tons), largest battleship yet built, is launched at Quincy, Massachusetts, for the Argentine navy. The sister ship *Moreno* is launched at Camden, New Jersey, September 23.

1912. *Jan. 24.* Government demands immediate compensation for attacks on shipping and property by Paraguayan revolutionaries, and severs diplomatic relations with Paraguay January 25. Satisfaction is received February 18.

In August. Italian emigration is resumed after suspension by Italian government as a protest against the new medical regulations for immigrants.

1913. *In May.* Government opposes American Beef Trust and introduces bill prohibiting the **export of meat** to United States.

July 16. Commission is appointed to inquire into meat industry.

Oct. 21. Theodore Roosevelt arrives in Rio de Janeiro, and is publicly welcomed.

1914. *Aug. 8.* **President Peña dies.** He is succeeded by Vice President Victorino de la Plaza.

For mediation between the United States and Mexico, see UNITED STATES.

AUSTRIA-HUNGARY.

1910. *Jan. 4.* Dr. Ladislas Lukács attempts to form a moderate cabinet in Hungary, but resigns.

Jan. 18. Count Khuen Hédérvary succeeds him. He advocates a National Labor party, but, lacking support, dissolves the parliament March 22. A riot follows in which the premier is injured. In the following election, a reaction in favor of Count Hédérvary gives the government 246 out of 413 seats.

Aug. 18. The **eightieth birthday** of the emperor-king, Francis Joseph, is celebrated with great festivities throughout the empire.

1911. *Jan. 30.* At Cracow University, **students strike** in protest against the appointment of a German professor; authorities close the university.

June 26. Von Biernerth, the Austrian premier, resigns, the general elections held June 13–20 resulting in the defeat of his ministry by the Christian Socialists. Baron Paul Gautsch von Frankenthurm succeeds him.

Sept. 18. Vienna is placed under martial law on account of **food riots.**

Oct. 31. The premier, Baron Paul Gautsch von Frankenthurm, resigns with his cabinet, and Count Karl Stürgkh is invited to form a ministry.

1912. *March 31.* Emperor Francis Joseph threatens to abdicate as King of Hungary unless the difficulties regarding the army law are overcome.

April 16. Hungarian ministry resigns; L. Lukács forms new cabinet April 21.

1912. *May 23.* A Socialist proclamation of a general strike, as a protest against the election of Count Tisza as speaker of the Lower House, results in **riots and bloodshed at Budapest.**

Oct. 31. Grave apprehensions are raised in Europe by the attitude of Austria-Hungary toward the Servian claims for seaports on Albanian coast.

Dec. 7. The **Triple Alliance** between Austria-Hungary, Germany, and Italy is renewed without alteration.

1913. *March 11.* Austria objects to Servian troops assisting Montenegro in the capture of Scutari. See Balkan War, under TURKEY.

The tension between Austria and Russia is relieved by the exchange of autograph letters between the Emperor and the Czar; on March 12, the two powers agree to partial demobilization.

March 23. **Ultimatum** is delivered **to Montenegro** in regard to Scutari. Russia advises King Nicholas to yield.

April 23. Austria-Hungary asks the powers to intervene in regard to the continued siege of Scutari by Montenegro. Troops are moved to the southern border.

June 8. Count Lukács' ministry falls in Hungary, after the corrupt practices of the premier are exposed in court. New cabinet is formed by Count Tisza on June 9.

July 25. **Provincial constitution of Bohemia** is temporarily **suspended** by the Emperor, owing to the wranglings of the Czechs and Germans interfering so much with the normal administration of the kingdom.

Austria demands that Servia and Greece cease hostilities against Bulgaria.

Oct. 18. Austria sends an ultimation to Servia demanding the evacuation of Albanian territory by Servian troops.

In October. Trieste office of Canadian Pacific Railway Company is closed and the manager arrested on a charge of illegally promoting the emigration of Austrian citizens before they have served in the army. Subsequent investigation shows the C. P. R. Company is not the chief offender.

1914. *April 25.* Emigration of males under thirty-four is prohibited unless full military service has been performed.

May 25. Francis Kossuth, Hungarian political leader, dies at age of 73.

June 28. **Archduke Francis Ferdinand, heir to the throne,** and his consort, the Duchess of Hohenberg, are shot and **killed at Sarajevo** by a Bosnian. Servia is popularly held responsible.

July 28. **Austria-Hungary declares war on Servia.** See GERMANY.

Oct. 26. Gavrio Prinzip and 23 accomplices in the assassination of the Archduke Francis Ferdinand and his wife, are pronounced guilty at Sarajevo; five are sentenced to death, and others to penal servitude.

1915. *Jan. 13.* Count Leopold von Berchtold resigns, and is succeeded by Stephan Baron Burián von Rajecz as foreign minister.

For the Great War, see GERMANY.

BELGIUM.

1910. *April 23.* The Brussels exposition is opened by King Albert.

Aug. 14. A fire at the Brussels exposition causes the loss of about $8,000,000 and of great numbers of art treasures.

1911. *June 8.* Cabinet crisis occurs, owing to the supposed Catholic leaning of **Education Bill.** Baron de Broqueville organizes a new Clerical ministry.

Aug. 15. In Brussels, 150,000 Liberals and Socialists covenant to struggle ceaselessly for the withdrawal of the Education Bill, for universal suffrage, and compulsory education.

In September. **Food riots** are reported from Charleroi and other towns.

In December. Nobel prize for literature is awarded to Maeterlinck.

1912. *In June.* Following the victory of the Clericals in the parliamentary elections, and their proposal to subsidize the " free " (Catholic) schools out of public funds, **anticlerical riots** break out in Brussels, and 100,000 men come out on strike.

1913. *April 2.* Princesses Louise and Stephanie lose suit to obtain property of late King Leopold seized by Belgian government.

April 26. International exposition at Ghent is opened by King Albert.

In April. **Political strike** planned by Socialists to secure equal suffrage is declared. By April 19 half of male working population are on strike. A compromise with the government is effected, and the strike ends April 26.

May 30. **Military bill** passes Chamber of Representatives, imposing compulsory universal military service and providing for an effective field army of 170,000 and a reserve of 200,000.

1914. *Aug. 2.* **Germany demands passage for her troops** through Belgium. See GERMANY. The Great War.

Aug. 17. **Seat of government** is transferred from Brussels (1) to Antwerp, (2) to Ostend on October 5, (3) to Havre, France, on October 13.

In November. Remaining population is on the **verge of starvation,** owing to the destruction or consumption of food supplies and the paralyzation of industries. Public charity is relied upon to provide for the sufferers.

1915. For the Great War, see GERMANY.

BOLIVIA.

1912. *Aug. 6.* Bolivia celebrates **eighty-seventh anniversary of its independence.**

Sept. 10. Government monopoly is created in the sale of firearms, ammunition, and explosives, the proceeds being devoted to purchase of war material and erection of a cartridge factory.

1913. *May 8.* General **Ismael Montes** is elected **president** for the second time, and is inaugurated August 15 in succession to Eliodoro Villazón.

BRAZIL.

1910. *Nov. 15.* **Marshal Hermes da Fonséca** is inaugurated **president.**

Nov. 24. The crews of the new battleships *São Paulo* and *Minas Geraes* **mutiny in the harbor of Rio de Janeiro,** kill several officers and shell the town, demanding higher pay and easier discipline. Congress grants the demands of the mutineers and guarantees amnesty to them.

1910. *Dec. 10.* The **mutiny of a naval battalion** on Cobras Island, in the Bay of Rio de Janeiro, joined by the cruiser *Rio Grande do Sul*, is put down after a severe artillery engagement in which 200 rebels are killed or wounded.
1911. *In 1911.* Brazil signs its 29th arbitration treaty, the largest number as yet accepted by any one nation.
1912. *In January.* **Election disturbances** occur in the state of Bahia; federal troops are sent to restore order.

Feb. 10. Baron Rio Branco, minister of foreign affairs, dies, and is succeeded by Dr. Lauro Müller. Rio Branco, during his ten years of office, secures for Brazil territory as large as France.

In July. **New Brazilian coinage** is authorized, the standard gold coin corresponding in weight, denomination, and form with the British pound sterling, the silver money to correspond with that of France.

In August. Strike of stevedores at Rio de Janeiro and Santos results in heavy losses to shippers.

Sept. 27. Measure is introduced conferring all rights of citizenship upon the Indian population (over 1,200,000).
1913. *Jan. 22.* Brazilian superdreadnought *Rio de Janeiro* of 27,500 tons is launched at Elswick, England. She is subsequently sold to Turkey, but on the outbreak of the Great War is taken over by the British government and renamed *Agincourt* (Aug. 1914).

In September. **Crisis in rubber industry** ensues, owing to glutting of the world's market with cheap "plantation rubber," especially from the Far East. Congress is asked to reduce export duty on rubber 50 per cent, and to secure reduced rates of transportation from the Amazon district.
1914. *In March.* Martial law is proclaimed in several states because of political unrest. Opposition newspapers are suspended, and the elections are successfully conducted, **W. B. Pereira Gomez** being **elected president.**

For mediation between the United States and Mexico, see United States.

BULGARIA.

1910. *In September.* The ministry is reconstructed with M. Malinov as premier. Several high officials are arrested, charged with corruption.
1911. *In July.* The Sobranje passes an act vesting the **succession to the throne** in King Ferdinand's first-born male descendant. "Charges of corruption are made against the king during the debates.

In October. Crown Prince Boris is betrothed to the Grand Duchess Olga, eldest daughter of the Czar of Russia.
1912. *In February.* **Treaty with Russia** is signed, by which $5,500,000 is to be paid for the occupation of Eastern Roumelia.

For Balkan War, see Turkey.
1913. *In April.* The strained relations between Bulgaria and her allies over the division of the captured Turkish territories lead to armed conflict. The Servians have no intention of ceding to Bulgaria the territory won by Servian arms, and disclaim the partition agreed upon in the treaty of alliance. The Greeks on their part are determined to retain Saloniki and Kavala.

May 22. Battle between Greeks and Bulgarians near Saloniki.

May 28. Servia demands of Bulgaria a revision of the treaty of partition.

In May. The Roumanian claim for territorial compensation from Bulgaria in return for neutrality during the war against Turkey is decided by the ambassadorial conference at St. Petersburg (Petrograd), Silistra and the immediately adjoining territory being awarded to Roumania.

In June. **Second Balkan War** centers round Bulgaria, her former allies combining to resist her claim to a dominating portion of the conquered territory. The actual outbreak is precipitated by the action of Bulgaria in ordering a general advance of her troops on June 29. The Greeks are engaged near Saloniki, and a fierce three-days battle is begun with the Servians at Zletovo.

In July. "Unofficial fighting" continues, no formal declaration of war having been made. On July 4, Bulgarian forces are routed at Kukush near Saloniki after several days battle. July 5–6, the **Balkan alliance is denounced** and the diplomatic rupture with Servia, Greece, and Montenegro is complete. Montenegro, though nominally at war, does not encounter the Bulgarians during the present hostilities. July 8, the Bulgarians are compelled by the Servians to evacuate Kochana and Ishtib. July 10, Roumania proclaims war, seizes Silistra, and dispatches a column to threaten Sofia, while on July 12, the Turks sweep across the Enos-Midia line and in less than two weeks reoccupy Adrianople (see Turkey). Against such overwhelming odds the Bulgarian forces fight in vain, and with victorious armies rapidly converging upon his capital, King Ferdinand sues for peace. July 20, Bulgaria offers Roumania the territorial concessions demanded and abandons opposition to the Roumanian advance. July 25, Austria warns Servia and Greece that Bulgaria should not be too greatly humiliated and demands a cessation of hostilities. By the 26th the Roumanians are within ten miles of Sofia, and halt by request of the Bulgarian foreign minister. A peace conference opens at Bucharest on July 28 between representatives of Bulgaria, Roumania, Servia, Greece, and Montenegro, and an **armistice** is concluded on July 30. During the Second Balkan War unspeakable atrocities are alleged to have been committed by Bulgarians in Macedonia. In certain small towns and villages women and children are butchered and mutilated, entire populations are massacred, and the places are burnt.

Aug. 1. Greeks defeat the Bulgarians at Juma, south of Sofia, in one of the bloodiest engagements of the war.

Aug. 10. **Treaty of Bucharest** is signed terminating the war against Bulgaria and delimiting the new Macedonian frontiers. The southeast frontier of Roumania is extended to the Tutrakan-Balchik line. Servia retains all the Macedonian territory occupied by her troops, also the Bulgarian lands in the east of the old Turkish vilayet of Kossovo. Greece secures considerable extension of territory, including Saloniki, Doiran, Demir-Hissar, Seres, Drama, and Kavala. The Serbo-Greek boundary is so determined that Monastir becomes Servian and Vodena and Florina fall to Greece.

Aug. 19. On the initiative of the Carnegie Endowment Fund for International Peace a committee representing the United States, Great Britain, France, Russia, Germany, and Austria, is appointed to investigate the Balkan atrocities, and to report on the economic cost of the war.

Sept. 29. Treaty of Constantinople is signed with Turkey, delimiting the Turko-Bulgarian boundary. See Turkey.

The Bulgarian government announces that during the two Balkan wars 44,892 Bulgarian soldiers were killed and 104,586 wounded.
1914. *Jan. 13.* Population of the newly acquired territories has been **decimated by the war.** An official census shows that the male population of Bulgarian Macedonia is reduced from 175,000 to 42,500; Bulgarian Thrace, from 494,000 to 225,000; Mustafa Pasha district from 33,000 to 4,000.

Feb. 17. Diplomatic relations with Servia are resumed.

Dec. 22. Roumania agrees to restore to Bulgaria most of the territory acquired after the Second Balkan War.

CHILE.

1910. *April 4.* **Trans-Andean railway** is officially opened on Chilean side.

Aug. 16. President Pedro Montt dies of heart disease at Bremen and, on October 15, **Ramón Barros Luco** is elected president.

In September. **Centenary of Independence** is celebrated.
1911. *July 10.* King George of England, in the **Alsop claim,** awards $966,000 to Americans. Payment is made November 13.
1912. *July 25.* Coalition cabinet resigns; **new ministry** is formed in August with Guillermo Barros as prime minister.
1914. *In August.* **Nitrate industry** suffers on account of the falling off in exports to Europe since the outbreak of the Great War.

For mediation between the United States and Mexico, see United States.

CHINA.

1910. *Feb. 23.* **Chinese occupy Lhasa,** Tibet, and announce their intention to make the administration purely Chinese. The Dalai Lama flees to India.

In February. Postal agreement with Japan is signed. China recovers mail-carrying monopolies on its railways.

In May. **Decimal currency** is decreed.

In June. **English** is made the official language **for scientific and technical education.**

In August. Boycott of American goods in Canton as protest against treatment of Chinese in San Francisco.

Oct. 3. The **National Assembly** (Tzu Chêng Yuan) **meets for first time.** It consists of 200 members (100 appointed by the throne and 100 selected by the governors from a body of 200 chosen by the provincial assemblies) and may discuss certain public financial questions, new codes (if approved by the emperor in advance) and other questions if submitted by the emperor.
1911. *Jan. 11.* The National Assembly is dissolved.

April 15. A loan of $50,000,000 is concluded with bankers of the United States, Great Britain, France, and Germany, for the development of Manchuria and the reform of the currency. An additional loan of $30,000,000 is made on May 20, for railways.

April 24. An edict, at Peking, estimates **deaths from plague** at 60,000.

April 28. **Serious riots** at Canton; government offices burned.

May 8. **New opium agreement** with Great Britain is signed at Peking, for the immediate reduction and final extinction, in 1917, of the opium exports from India.

May 8. A **cabinet, general staff, and privy council** are created at Peking by imperial edict. Prince Ching is made premier. Manchus secure the preponderance of power. Friction between them and the Chinese, and the feeling that the Manchus are unfavorable to the progress of the reform movement, results in the outbreak of a **patriotic and radical revolt** in southern and central China.

Sept. 4. Flood along the Yangtze River drowns many thousands. There is great unrest in the districts along the river and, on September 8, United States gunboats are ordered there.

Oct. 1. **An organized rebel force** is reported in the field in Hupeh province. They are victorious in a battle, October 5–6, with the imperial forces, in which the casualties are reported as very heavy. October 11, the rebels **capture Wuchang,** and, October 12, repulse an attempt by the imperial land and naval forces to retake the city. October 13, a massacre of Manchus occurs at Hankow. October 14, Yuan Shih-kai is recalled from his retirement and appointed viceroy of Hunan and Hupeh. Many vessels of the imperial navy join the revolutionists. October 18, there is a series of engagements for the possession of Hankow. The revolutionists hold most of the city. October 22, the revolutionists win an important battle and within a few days capture Kiukiang and Jukao, as well as many smaller towns. October 28, the imperial forces recapture Hankow.

Oct. 30. The throne issues a proclamation apologizing for the evil conditions in the empire and promising reforms. The **National Assembly** meets at Peking, and forces the throne to grant immediately a **complete constitutional government,** amnesty to rebels, and the retirement of objectionable officials.

Nov. 7. **Yuan Shih-kai is elected premier** in place of Prince Ching. He accepts, November 15, and opens negotiations with the revolutionists.

Nov. 3, 5, 8. Revolutionists capture Shanghai, Hangchow, and Nanking.

Nov. 16. **Yuan Shih-kai forms a cabinet.** December 6, the regent, Prince Chun, abdicates.

Dec. 18. A peace conference between the leaders of the revolution and of the imperial forces convenes at Shanghai. December 21, Yuan Shih-kai refuses the plan of a republic proposed by the revolutionists.

Dec. 29. A provisional republican convention at Nanking, representing 17 provinces, **elects Sun Yat Sen provisional president of the Chinese Republic.** He accepts and announces a cabinet, with Wu Ting Fang, formerly minister to the United States, as Minister of Foreign Affairs.
1912. *Jan. 2.* **Sun Yat Sen is inaugurated** provisional president of the Chinese republic, at Nanking. His first official act is the adoption of the Gregorian in place of the Chinese Calendar.

Jan. 3. Republican Assembly at Nanking votes the introduction of a gold standard as in Japan.

Russia demands the withdrawal of all Chinese from the seceded Chinese province of Outer Mongolia.

Jan. 16. Bomb is thrown at Yuan Shih-kai in the streets of Peking, killing two soldiers and the carriage horses.

Jan. 19. The 15th regiment of United States infantry arrives at Chinwangtao, to take part in guarding the railway from Peking.

Feb. 4. Empress Dowager instructs Yuan Shih-kai to coöperate with the south in the **establishment of a republic.**

Feb. 12. **Manchu dynasty formally abdicates** and accepts the Republic.

Feb. 14. Sun Yat Sen resigns the provisional presidency in favor of Yuan Shih-kai, elected by National Assembly in Nanking February 15.

March 2. Two hundred United States infantry are ordered from Tientsin to Peking to **reinforce the legation guard.** Looting and bloodshed continue at the capital.

March 3. Mutinous soldiers at Tientsin raid the mint, the banks, and other establishments, and set fire to the city.

March 7. Foreign banking syndicate advances $700,000 to Chinese republic, and undertakes to provide $35,000,000 monthly for six months.

March 10. **Yuan Shih-kai is inaugurated president** at Peking. A general amnesty is proclaimed.

March 21. Suffrage is granted to women who are literate and own property.

April 29. Yuan Shih-kai opens the Advisory Council at Peking.

May 13. **First trial by jury** begins in Shanghai.

Aug. 1. Dr. G. E. Morrison, Peking correspondent of the London *Times*, is appointed political adviser to the president.

Aug. 29. Typhoon destroys about 40,000 lives; September 16, another typhoon kills about 50,000 people.

1912. *Aug. 30.* The **Jackson-Crisp loan** of $50,000,000, secured on the free surplus of the salt tax, is agreed to. Half the amount is issued September 26. The Six Powers group (Great Britain, France, Germany, Russia, United States, Japan) protests against this allocation of the salt tax, which is already charged with six prior obligations. The Chinese government defers to the protest, and the remainder of the loan is not issued.

Great Britain forbids Chinese expedition into Tibet.

Oct. 10. First anniversary of Chinese revolution is celebrated at Peking.

Oct. 19. Russia recognizes the **independence of Outer Mongolia.**

1913. *Feb. 21.* Lung Yu, formerly Empress Dowager, dies.

April 8. **First parliament of Chinese Republic** convenes at Peking.

April 26. Yuan Shih-kai signs agreement with the five-powers banks for a loan of $125,000,000, without reference to parliament.

In April. Sun Yat Sen, leader of the patriotic socialistic party, conspires against the government and prepares the South for another revolution.

May 2. Formal **recognition by United States** is the occasion of great rejoicing.

July 9. Treaty with Russia, conceding the autonomy of **Outer Mongolia** and granting Russia exceptional commercial privileges, is ratified by Chinese Parliament. The nominal suzerainty of China is recognized, but the province is virtually transformed into a Russian protectorate.

In July and August. **Southern provinces revolt** against the Peking government, the uprising being backed by Sun Yat Sen. The revolt spreads from Kiangsi province to Szechwan, Hunan, Anhwei, and the coastal provinces of Kwangtung, Fukien, Chekiang, and Kiangsu, Shanghai arsenal being attacked July 23–25. The foreign loan decides the issues. Timely payment of the Northern troops and of the navy prevents further defection, and the revolutionary forces are speedily overcome. Nanking, the "southern capital," holds out against the government through the month of August, but on its capture September 1 the revolt "for the punishment of Yuan" collapses and the leaders disappear.

Oct. 2. The Chinese National Assembly decides that the presidential term shall be five years, with not more than one reëlection.

Oct. 6. Provisional President **Yuan Shih-kai is elected president** of the Chinese Republic, and is inaugurated October 10, the Republic being simultaneously recognized by the powers.

Oct. 7. General Li Yuen-heng, provisional vice president, is elected vice president of the Chinese Republic.

Oct. 16. Fire in Shanghai renders 20,000 persons homeless.

Nov. 5. President Yuan Shih-kai orders the dissolution of the Kuo Ming Tang, consisting of his most troublesome opponents, and the largest party in parliament, and expels from the legislature all members connected with this party. **Parliament is virtually abolished,** since the removal of nearly 400 members makes a quorum in either House impossible.

Nov. 10. Chino-French Bank signs contract for loan of $30,000,000 to Chinese Republic.

Nov. 13. Parliament is suspended by presidential mandate, and is replaced by an administrative conference consisting of 71 members. The **collapse of parliamentary government,** indicating the failure of Young China as an effective political force, synchronizes significantly with a widespread **revival of Confucianism** and a consequent reaction against revolutionary doctrines.

1914. *Jan. 11.* Parliament is definitely dissolved by President Yuan Shih-kai.

Jan. 29. Bill establishing Confucianism and the worship of Heaven as the **State religion** is passed. Kotow ceremony is also reëstablished.

Feb. 12. Government grants Standard Oil Company important oil concessions in Shansi and Chihli provinces, on basis of receiving 27½ per cent. of the developing company's stock.

May 1. New Chinese constitution is promulgated, abolishing the premiership and concentrating power in the president. **Yuan Shih-kai virtually becomes dictator.**

July 30. Flood on the Si River causes considerable damage in Kwangtung and Kwangsi provinces; about 112,000 houses are destroyed and 3,300 people perish; property loss, $43,000,000.

See GERMANY. The Great War.

COLOMBIA.

1914. *June 9.* Treaty with the United States relating to the Republic of Panama and the Panama Canal is ratified. See UNITED STATES, April 17.

COSTA RICA.

1910. *May 4.* An earthquake partially destroys the town of Cartago; great loss of life.

1911. *March 1.* President Jimenez signs the contract refunding the foreign debt with bonds amounting to $8,086,000, payable Jan. 1, 1958.

1912. *June 21.* Severe earthquake shocks occur; river courses are changed; loss of life and property.

1913. *Aug. 1.* Parcel post service between Costa Rica and other Central American Republics becomes operative.

1914. *May 8.* **Alfredo González** is inaugurated as president.

Oct. 9. National Bank of Costa Rica is established by presidential decree.

CUBA.

1911. *In August.* Disturbances are created by General Acevedo, the revolutionary veteran, who denounces the administration and calls upon President Gomez to resign. The riots are suppressed.

Dec. 23. Sugar crop is declared the largest on record.

1912. *Jan. 16.* United States threatens intervention unless the laws be upheld, and the military be restrained from participating in political affairs.

April 26. Treaty of friendship, commerce, and navigation signed with Peru.

May 20. **Negro uprising** breaks out, led by General Estenoz. May 25, American fleet of observation is sent from Key West. President Gomez protests against United States activity, but President Taft disclaims intervention. June 5, United States marines are landed to protect foreign property. The rebels are defeated at Jarahueca June 13; General Estenoz is killed at Zega Ballaco June 26; and with the defeat near Santiago, July 18, the rebellion collapses. July 25, United States marines are withdrawn.

In August. United States claims aggregating $557,000 are pressed for immediate payment.

Nov. 1. General M. G. Menocal is elected president.

1913. *March 13.* The President vetoes the **Amnesty bill** objected to by the United States because it would set at liberty several hundred criminals, political and otherwise. The bill is passed in a modified form April 28.

April 21. **General Mario G. Menocal** is formally proclaimed **president,** and is inaugurated May 20.

May 17. A Cuban aviator, Domingo Rosillo, flies from Key West to Havana, the first flight between the United States and Cuba.

Oct. 23. Sugar crop for the year is estimated at 2,429,240 tons, which constitutes a record.

Nov. 6. General Felix Diaz, former candidate for president of Mexico, is stabbed at Havana by assassins, but not mortally.

1914. *In August.* The Great War causes depression in tobacco industry; unemployed cigarmakers are reduced to great straits.

DENMARK.

1912. *May 14.* **King Frederick VIII. dies** from apoplexy in street of Hamburg, and is identified five hours later in the morgue. His son succeeds as **Christian X.**

1913. *June 21.* Radical cabinet is formed with C. T. Zahle as premier; members decide to refuse titles; it is announced that the wife of the premier will continue her work as a stenographer.

1914. *June 9.* Chamber passes Woman Suffrage bill removing property qualifications.

Oct. 29. Exportation of food to Germany is made a penal offense.

Dec 18. King Christian, with King Haakon of Norway and King Gustavus of Sweden, meet at Malmö to discuss the Great War. See GERMANY.

DOMINICAN REPUBLIC.

1911. *Nov. 19.* **President Cacéres is assassinated,** and his two assailants are captured and shot. December 2, Senator Eladio Victoria is chosen provisional president.

1912. *Feb. 5.* Senator Eladio Victoria is elected president.

In May. A **revolution** breaks out, and rebel victories are reported. The **United States intervenes,** sending a gunboat in September, and landing marines in October to protect customhouses along the Haitian frontier.

Nov. 28. President Eladio Victoria resigns, and on December 2 Congress elects Archbishop Nouel as provisional president for two years.

1913. *April 13.* Following the resignation of Archbishop Nouel, José Bordas Valdés is elected provisional president.

In September. **Revolution** breaks out early in the month, led by Horatio Vasquez, former provisional president. The revolutionists seize the city of Puerto Plata and gain control of most of the northern districts. Federal gunboats begin the bombardment of Puerto Plata September 8.

Oct. 8. Peace pact is signed by the warring factions through the instrumentality of the United States minister.

Oct. 16. Rebels resume war operations in defiance of the prohibition of further civil war issued by United States.

Oct. 21. Rebels agree to make peace with Provisional President Valdés.

1914. *Feb. 17.* General treaty of arbitration is signed with the United States at Washington.

June 26. U. S. warship at Puerta Plata compels a force of revolutionists to cease bombardment of the city, to protect foreigners.

Aug. 27. President Bordas resigns and Dr. Ramon Baez is chosen provisional president by the Congress.

Dec. 5. **Juan Isidoro Jiménez,** recently elected under the supervision of a United States commission, takes oath as **president.** Quiet is again restored.

ECUADOR.

1911. *Jan. 29.* Proposed **lease of the Galápagos Islands** to the United States for a naval station is refused.

Sept. 1. Emilio Estrada is inaugurated president.

Dec. 22. President Estrada dies suddenly at Guayaquil. Carlos Freile Zaldumbide becomes provisional president.

1912. *Jan. 15.* U. S. cruiser *Maryland* is ordered to Guayaquil to safeguard American interests during a revolutionary uprising.

Jan. 18. At Yaguachi, northeast of Guayaquil, Quito government army defeats the Guayaquil forces supporting the provisional government proclaimed by Gen. Montero. Over 1,000 casualties.

Jan. 28. Mob breaks into Quito jail and lynches five revolutionist generals, including Gen. Eloy Alfaro, the ex-president.

April 1. General Leonidas Plaza is inaugurated president.

In July. Yielding to United States pressure, Ecuador pays part of a long-outstanding debt for transporting troops over an American-owned railroad, and agrees to have the balance settled by arbitration.

1913. *In October.* **Revolution** breaks out, and the rebel general Concha defeats the government troops at Ambato. An uprising is subsequently reported from Esmeraldas, and a small force is dispatched by sea to suppress the movement.

1914. *Feb. 16.* A revolutionist force successfully holds the city of Esmeraldas; federal troops under President Plaza recapture the city March 11.

FRANCE.

1910. *Feb. 20–29.* All southern-central France suffers from almost **unprecedented floods.** In Paris the damage is especially great.

In March. **Old-age pension** bill is passed to go into effect January 1, 1911. It gives a pension to wage earners after 30 years of service.

April 24. The general election results in a victory for the government.

May 26. The submarine torpedo boat *Pluviôse* is sunk by collision in the English Channel. Her crew of twenty-three men perish.

June 21. Discovery of an **antityphoid vaccine** is announced by the Paris Academy of Medicine.

Sept. 5. Madame Curie announces the obtaining of pure radium.

Oct. 11. A **strike** of employees **on** the **state railroads** becomes so serious that Premier Briand resorts to calling the employees back to duty as army reserves. His action is sustained by the Chamber of Deputies.

Dec. 9. Legagneux ascends to a height of 10,499 feet in a monoplane.

1911. *Jan. 19.* **Serious riots** in the Épernay district; thousands of gallons of champagne destroyed.

1911. *Feb. 27.* M. Briand resigns as premier with his cabinet and M. Monis is called upon to form a new ministry.

March 7. Eugène Renaux flies in a biplane with one passenger from Paris to the top of Puy-de-Dôme (217 miles) in 5 h. 10 m. 46 s., and wins the Michelin prize of $20,000.

March 10. **Meridian of Greenwich** is adopted as the prime meridian of France.

April 10. Rioting occurs in the Marne champagne district over decision of the Senate that wines of the Aube district may be labeled champagne.

April 12. Pierre Prier flies in a monoplane from London to Paris without a stop.

In April. A serious **revolt among the Moroccan tribesmen** breaks out. On April 17, France sends a large force to quell the outbreak. On May 2, this force arrives at Fez, where the sultan, Mulai-Abd-el-Hafid, is besieged, and scatters the tribesmen.

May 21. M. Berteaux, Minister of War, is killed and Premier Monis is severely injured by being struck by an unmanageable aëroplane.

June 23. The Monis ministry resigns. M. Caillaux forms new ministry.

July 1. **German gunboat Panther anchors at Agadir, Morocco,** signifying Germany's unwillingness to give France a free hand in that country. Great indignation is aroused in France, to whom Great Britain lends moral support. After prolonged negotiations, France's claim to a protectorate in Morocco is recognized on November 3, Germany receiving as compensation 96,520 square miles in northern French Equatorial Africa.

Aug. 22. The *Mona Lisa* of Leonardo da Vinci is stolen from the Louvre.

Sept. 3. **Food riots** occur in the northern provinces; thousands of housewives boycott the local markets.

Sept. 4. R. Garros attains a height of 13,943 feet in a monoplane.

Sept. 25. Battleship *La Liberté* is destroyed and sunk in Toulon harbor by the explosion of one of her magazines. More than 250 men are killed.

1912. *Jan. 13.* French ministerial crisis ends in the formation of a **strong cabinet under Raymond Poincaré.**

Feb. 10. Senate ratifies the Moroccan agreement with Germany.

Feb. 13. A woman sits as judge in Paris commercial tribunal.

March 1. **Vêdrines makes 101 2-3 miles in one hour** in a monoplane.

March 19. About half the coal miners of northern France are reported on strike. A settlement is reached March 24.

March 25. Several atrocious murders and robberies take place in Paris, the criminals escaping in stolen automobiles.

In April. The French troops in Morocco are engaged in quelling a **Moorish uprising,** and in overthrowing the southern pretender El Hiba. Fez is recaptured from the rebels April 20. The revolt spreads among the tribesmen, and for a time Fez is in a state of siege. The city is fiercely attacked on May 26, but the tribesmen are repulsed with heavy loss. In July and August, Marakesh is invested, but is recaptured by the French September 9.

May 28. Birthrate for 1911, 742,114, is lowest on record.

June 30. **Bicentenary of Jean Jacques Rousseau** is celebrated in Paris.

Sept. 10. Teachers' unions are dissolved by government, on account of antimilitary and syndicalist tendencies.

It is announced that France will concentrate her naval strength in the Mediterranean. See GREAT BRITAIN, May 29, 1912.

Sept. 27. **First review of an aëroplane armada** is held at Villacoublay, near Paris, 72 military aëroplanes passing before the minister of war.

Nov. 26. Franco-Spanish treaty is signed, terminating the long diplomatic duel over the Moroccan question.

1913. *Jan. 17.* **Raymond Poincaré is elected president** to succeed Armand Fallières, and is inaugurated February 18.

Jan. 21. New cabinet, headed by Aristide Briand, takes office.

March 22. A French force is ambushed by Moors in the Sahara.

In March. Briand cabinet is defeated in Senate on electoral reform bill and resigns March 18. New ministry is formed by Jean Barthou March 21. A vigorous defense policy is pursued by the government, and increased appropriations are made. An army bill is introduced with provision for a three-year term of military service. This measure is bitterly opposed by Socialists. By May the **antimilitarist agitation** becomes formidable, and finds expression in a twenty-four hour general strike, threats of mutiny in the army, and widespread disorders.

In May. Many **conflicts with Moors** are reported. French force is ambushed in Morocco on June 13.

June 24. President Poincaré visits England as the guest of the nation.

July 13. Aviator Léon Letort flies from Paris to Berlin (590 miles) without stop, establishing a new record.

Aug. 7. **Army bill** is adopted by Senate, providing for three-year service and increasing the peace strength of the army to 673,000 at an increase of $35,000,000 annually, and a nonrecurring cost of $145,000,000. Families whose sole supporter is in the army are to receive subventions of a franc a day in addition to half a franc for each child under 16. The passage of the law arouses fresh indignation. See March, 1913.

Sept. 23. Roland G. Garros, French aviator, flies across the Mediterranean from France to Tunis (558 miles) in 7 hours, 53 minutes.

Sept. 29. Maurice Prévost makes new aëroplane speed record at Reims, flying 200 kilometers (124.27 miles) in 59 minutes, 45⅘ seconds.

Oct. 7. President Poincaré arrives in Madrid, returning the official visit paid by King Alfonso in May.

Nov. 18. Electoral reform bill is adopted by the Chamber of Deputies, restoring in modified form the clause providing proportional representation, which caused the downfall of the Briand cabinet.

Dec. 2. Following the government's defeat in the Chamber of Deputies on the question of exempting the new *rentes* from taxation, Premier Barthou and his ministry resign.

Dec. 8. Senator Gaston Doumergue forms ministry, made up of Socialists, Radicals, and Radical Socialists.

1914. *Jan. 15.* Aviator Legagneux breaks world's altitude record by ascending to height of 6,150 meters (20,177 feet).

March 16. Madame Caillaux, wife of the minister of finance, shoots and kills Gaston Calmette, editor of the *Figaro,* who had been engaged in a bitter newspaper campaign against her husband. She is acquitted of the charge of murder by a Paris jury July 28.

April 21. King George and Queen Mary of England are enthusiastically welcomed in Paris, on the tenth anniversary of the establishment of the *entente cordiale.*

May 8. French column occupies Taza, in **Morocco,** thus practically completing the occupation of the whole of the French zone.

1914. *June 1.* Cabinet under Premier Gaston Doumergue resigns. Ribot accepts the premiership June 8, but four days later resigns on being defeated in the Chamber. **René Viviani** (Socialist) forms a cabinet June 13.

July 31. Jean Léon Jaurès, leader of the Socialists in the Chamber of Deputies, is assassinated.

Aug. 3. State of **war** acknowledged to exist **between Germany and France,** as ambassadors are withdrawn and each accuses the other of hostile acts. See GERMANY. The Great War.

Aug. 26. Cabinet is reconstructed with M. Viviani still premier; and M. Delcassé, foreign minister; M. Millerand, war minister; M. Briand, minister of justice; M. Ribot, minister of finance; M. Doumergue, colonial minister. Cabinet is considered the strongest in the history of the Third Republic.

Sept. 3. Government withdraws temporarily from Paris to Bordeaux.

Sept. 5. France, England, and Russia agree not to make peace separately.

Nov. 7. Paris universities open, attended only by middle-aged men and foreigners.

Dec. 9. Government returns to Paris.

Dec. 18. **French protectorate over Morocco** is formally recognized by Great Britain.

Dec. 22. Parliament votes $1,700,000,000 for the war. This is the greatest sum pledged, at one time, by any legislative body in the history of the world.

1915. For the Great War, see GERMANY.

GERMANY.

1910. *Jan. 27.* There is severe rioting in Brunswick during a Socialist demonstration in favor of **electoral reform.** Similar troubles occur elsewhere.

July 22. Twenty-one Mormon missionaries are expelled,

Aug. 25. The Kaiser in a speech at Königsberg declares his belief in the rule of the Hohenzollerns over Prussia by "divine right."

August–October. Great shipyard strike. 22,000 men are idle. Strikers gain reduction of one hour a week and increase in wages of about 5 per cent.

1911. *Jan. 31.* Paul Singer, the leader of the Social Democratic party in the Reichstag, dies at the age of 67. His funeral, on February 5, is the greatest demonstration ever seen in Berlin in honor of a private citizen.

May 16. Prussian Diet passes a **Greater Berlin bill;** the extended city will number about 3,500,000 inhabitants.

In May. **Alsace-Lorraine** is **made an independent federal state** with three votes in the Bundesrath, the executive to be a life regent nominated by the emperor on the proposal of the Bundesrath.

Sept. 2. Statue of Baron von Steuben, presented by the United States, is unveiled at Potsdam.

In September. The Socialist Congress at Jena unanimously **protests against any attempt to provoke a war** between Germany, Great Britain, and France.

As to Morocco, see FRANCE.

1912. *Jan. 24.* **Two hundredth anniversary of the birth of Frederick the Great** is celebrated throughout Prussia.

Jan. 28. A National Defense League (*Wehrverein*) is inaugurated in Berlin for promoting the interests of the army.

In January. The general election is noteworthy for the **success of the Socialists,** the defeat of Liberalism, and the maintenance of the position of the Clerical Center party.

March 11. Coal strike begins in Westphalia. On March 14 more than 300,000 German miners are reported on strike. Strike ends March 24.

May 21. The Reichstag passes **naval bill** providing $28,500,000 annually till 1920.

In November. The Mecklenburg Diet imposes **a tax on bachelors** of 30 years of age and upwards. They are to pay 25 per cent more taxes than married men, except in cases where legally bound to provide for relatives.

Dec. 7. **Triple Alliance** (Germany, Austria-Hungary, Italy) is renewed.

Dec. 23. Prince Ludwig, the new Bavarian regent, vetoes a plan to depose the mad King Otto and place Ludwig on the throne.

1913. *April 21.* A committee of the German Reichstag votes to investigate the charges that manufacturers of arms and ammunition stimulate militarism with a view to selling war material. This leads to the **Krupp trial** in Berlin July 31, when several military officials are found guilty of selling information to Krupps, and to another trial in October when two high officials of the Krupp Company are found guilty of bribing government officials to betray military secrets.

May 21. **Marriage of the Kaiser's only daughter** Princess Victoria Luise to Prince Ernst August of Cumberland, son of the exiled Hanoverian claimant, takes place in Berlin in the presence of the German Emperor and Empress, King George and Queen Mary of England, and the Czar of Russia. The marriage ends a dynastic feud, dating from 1866, between the royal houses of Prussia and Hanover.

June 16. Twenty-fifth anniversary of Emperor William's accession is celebrated throughout the Empire.

June 30. By passage of **Army bill,** peace footing is increased to 661,176.

Aug. 16. Germany decides not to participate in the Panama-Pacific Exposition at San Francisco.

In August. Centenary of the War of Liberation is celebrated.

Sept. 9. Zeppelin airship, *L 1,* is wrecked during a hurricane between Helgoland and the mainland, 14 of the crew of 21 being drowned.

Oct. 17. The new Zeppelin naval airship, *L 2,* explodes above Johannisthal, killing all on board (28 men).

Oct. 27. The Federal Council votes unanimously, in spite of the Crown Prince's opposition, to place Prince Ernst August of Cumberland on the throne of the **duchy of Brunswick.** The prince succeeds on November 1, thus terminating the regency of Johann Albrecht.

Oct. 30. Bavarian Diet passes a bill to dethrone the incurably insane King Otto and to authorize the assumption of the throne by Prince Regent Ludwig. The latter ascends the throne as **King Ludwig III.** on November 5.

In October. Centenary of the "Battle of the Nations" is celebrated at Leipzig in the presence of the Emperor.

Dec. 4. A vote of no confidence in the government is adopted in the Reichstag to mark disapproval of the action taken in regard to the clash between the military and the civilians at Zabern, Alsace.

Dec. 14. The Crown Prince is recalled to Berlin from Danzig to join the general staff of the army, thus ending his exile from the capital since 1911.

1914. *March 22.* The Kaiser leaves for Vienna on a visit to the Emperor Francis Joseph, afterwards proceeding to Venice to meet the King of Italy.

June 24. Reconstructed Kiel canal is formally opened by the Kaiser.

THE GREAT WAR.

Preliminary events. The events leading to the greatest war the world has ever known are as follows: — June 28, the Archduke Francis Ferdinand is assassinated (see AUSTRIA-HUNGARY). July 23, an Austro-Hungarian ultimatum is presented to Servia as a result of alleged Servian complicity in the crime. July 24, the Austrian demands are communicated to the powers and receive the formal approval of the German government; Russia considers the Austrian demands an indirect challenge to Russia, and protests that the time (48 hours) allowed for Servia's reply is insufficient. July 25, Servia replies to the Austrian note, conceding part of the demands, and declaring her willingness to accept arbitration on the other points; Austria considers the reply unsatisfactory, and the Austro-Hungarian minister leaves Belgrade. July 26, mobilization of the Austro-Hungarian army commences; Great Britain's efforts toward mediation are unsuccessful, Germany holding that formal intervention would be impracticable "except at the request of Austria and Russia;" Russia meanwhile warns Germany that Russia cannot remain indifferent to the fate of Servia.

July 28, **Austria-Hungary declares war on Servia**. July 29, Russia mobilizes the southern military districts; Germany offers, in return for British neutrality, to promise territorial integrity of France, but refuses to give a similar assurance regarding French colonies, or to promise to respect Belgian neutrality. July 30, Great Britain refuses this offer, declaring that it would be a national "disgrace to make this bargain with Germany at the expense of France." Belgrade is bombarded by Austro-Hungarian forces. July 31, general Russian mobilization is ordered; **Germany presents an ultimatum to Russia** demanding a cessation of mobilization within twelve hours; she also presents an ultimatum to **France** asking what course the latter will take in case of a Russo-German war. Aug. 2, German forces invade the neutral state of Luxemburg; Germans also enter French territory near Cirey. Aug. 3, **Italy** declares her neutrality, holding that the other members of the Triple Alliance are not engaged in a defensive war. Germany presents an ultimatum to **Belgium**, demanding passage for German troops through Belgian territory. Aug. 4, the King of the Belgians appeals to the King of England for help. **England**, as one of the guarantors of the neutrality of Belgium, sends an ultimatum to Germany asking for assurance by midnight that Belgian neutrality will be respected; this demand is regarded in Berlin as tantamount to a declaration of war. Germans meanwhile enter Belgian territory. Aug. 6, Austria-Hungary declares war on Russia. Aug. 7, **Montenegro** declares war on Austria in support of Servia. Aug. 8, **Portugal** announces its intention of fulfilling its treaty obligations to England. Aug. 10, the French ambassador at Vienna demands his passport. Aug. 12, Great Britain declares war on Austria-Hungary. Thus in less than three weeks Europe is plunged into war, which, extending to the various oversea possessions, virtually affects the entire world.

Underlying Causes of the War.

I. As viewed by Germany: —

(1) **Growing fear of Panslavism** as irreconcilable with Pan-Germanic expansion and *Kultur*.

(2) **Servian agitation and intrigues**. These are alleged to have been abetted by Russia, and to have for their goal the destruction of the Dual Monarchy, the disruption or weakening of the Triple Alliance, and the complete isolation of the German Empire. "If the Serbs continued with the aid of Russia and France to menace the existence of Austria-Hungary, the gradual collapse of Austria and the subjection of all the Slavs under one Russian scepter would be the consequence, thus making untenable the position of the Teutonic race in Central Europe" (*German White Book*).

(3) **Mobilization of Russian army and navy**. This is regarded not as precautionary but as a military measure directed against Germany and Austria-Hungary. "The Russian mobilization, in regard to the seriousness of which the Russian Government was never allowed by us to entertain a doubt, in connection with its continued denial, shows clearly that Russia wanted war" (*German White Book*).

(4) **Geographical pressure** arising from her mid-European situation between Russia and France. The coalition between these two powerful neighbors threatens Germany's national existence.

(5) **Revenge for Alsace-Lorraine**. The loss of Alsace-Lorraine by the French in 1870 leaves an open sore which only their recovery can heal; hence, France's supposed readiness to strike at Germany when Germany is at war with another power. In view of Russian mobilization, Germany demands whether France intends to remain neutral in a Russo-German war.

(6) **Belgium's refusal to allow passage of German troops through Belgian territory**. Germany's attempts to "localize" the war are frustrated. Panslavism and "revanche" render her ultimatums futile, and finding herself at war with Russia and France, her natural policy to strike a swift and decisive blow at the heart of France would enable Germany to meet Russia with practically the full force of German arms. To do this she must march through the neutral states of Belgium and Luxemburg. Passage through Belgium is furthermore necessary as a defensive measure, because, as stated by the German foreign secretary, the "German army could not be exposed to French attack across Belgium," and such an attack is alleged to have been planned by the French. Belgium's refusal widens the field of war.

(7) **England**. England, with unreasonable interference, comes to the support of Belgium, refusing to see that it is "for strategical reasons a matter of life and death to Germany to advance through Belgium, absolute false though this is in reality" (*British White Book*). England's ostensible reason for entering the conflict is challenged by some German publicists, it being asserted that German commercial and naval rivalry is the determining factor. Some extremists even hold that England, and not Russia, wove the web in which Germany is entangled.

II. As viewed by the Allies: —

(1) **Prussian militarism**. Militarism has bred a distinct caste whose *raison d'être* is war — war for the territorial growth of Germany, for the spread of German *Kultur*, for world dominion.

(2) **Idealization of war as the vehicle of expansion and culture**. The doctrines of Treitschke and his disciple Bernhardi have idealized war, and prepared Germany to look upon the sword as the natural vehicle of German expansion and culture. "War," says Treitschke, "is the most powerful maker of nations; war is politics *par excellence*." Hence, Bernhardi writes: "The maintenance of peace never can be the goal of a policy."

(3) **Growth of Socialism a menace to militarism**. Germany is a military oligarchy that has sedulously prepared for a general war of aggression. The wage-earners are growing in power, and threaten the foundation of militarism. If Germany is to strike, she must strike now.

(4) **Weltpolitik* and envy of England's colonial empire**. Growth of population, struggle for new markets, as well as dreams of a vast colonial empire, have fanned the war spirit in Germany. Continental expansion is essential to the success of the gigantic project. Access to the English Channel by conquest of Belgium and northern France (and possibly of Denmark and the Netherlands) would prepare the way for an attack on England, and, if successful, the disruption of the British Empire and seizure of its oversea possessions. Treitschke and his followers designate England as the final object of German attack ("Our last and greatest reckoning is to be with Great Britain," says Treitschke), for England blocks the growth of Germany as a world power; hence, hatred of England has been engendered in readiness for "the Day." "Even English attempts at a *rapprochement* must not blind us to the real situation," says Bernhardi. "We may, at most, use them to delay the certain and inevitable war until we may fairly imagine we have some prospect of success." But England is to be left until the continental foes are crushed. Germany tries her best to secure England's neutrality in this war (see July 29 above), and the German chancellor speaks of "the blow of Great Britain joining Germany's enemies" (*British White Book*).

(5) **Barbaric philosophy of the State — Might is Right**. The German theory of the State ("*der Staat ist Macht*")† is antagonistic to the rule of international law, and especially to the right of weaker nations. "Might is the supreme right," says Bernhardi. — Instance, Germany's violation of the neutrality of Belgium, though she herself is one of its guarantors.

(6) **Disregard of the public law of nations**. England, as another signatory of the Belgian treaty, answers the appeal of Belgium, and fights for the public law of Europe, none the less than for her own preservation. "Just for a word — *neutrality* — just for a scrap of paper Great Britain was going to make war on a kindred nation" (the German chancellor as quoted in *British White Book*).

(7) **Pan-Germanism and Eastern markets**. Pan-Germanism, the irreconcilable foe of Panslavism, looks to war to break through the barriers shutting it from the East. The Balkan War, while virtually eliminating the Turk, strengthens the position of the Slav. The commercial conquest of Asia underlies the whole Eastern Question: "*Drang nach Osten*" ‡ is the watchword of German *Weltpolitik*.*

Military and Naval Operations.

Western Campaign. For three weeks the small Belgian army checks the advance of the Germans, giving the Allies time to concentrate their forces. **Liége**, a fortified city commanding the gateway into Belgium, makes a gallant defense, but the city is occupied by the invaders on August 9, though the forts still hold out. A week later the main German army crashes through the Belgian resistance, occupying Brussels on August 20, and destroying **Louvain** *en route*. The Belgian forces fall back on Antwerp, to which city the seat of government removed on August 17, while three German armies swing southward in a drive toward Paris, leaving a containing force to guard their communications. Another German army strikes south from Liége, while the Crown Prince's army penetrates the frontier by way of Luxemburg. Meanwhile, the main French army is fighting along the Meuse and the Vosges, raiding Alsace-Lorraine, capturing, losing, and recapturing Mülhausen, but on the whole swept back by the German onslaught. To stem the tide of the victorious Germans debouching from Brussels, a few French, and two British, army corps are hastily flung across the threatened territory. On August 23, by sheer weight of numbers, the invaders thrust back the Allies at Charleroy and Givet. On the left flank of the Allies, the British, commanded by Sir John French, repulse several attacks at **Mons** (Aug. 24), and two days later, at **Cambrai**, von Kluck launches five army corps against the British two in an attempt to annihilate the Allied left and gain a second Sedan. But the British stand off their assailants. With the German capture of the **Namur** forts (Aug. 27) the **general advance on Paris** begins.

The Allies fall back before the Germans, inflicting enormous losses on the massed formations, meanwhile frustrating all efforts to envelop or shatter their flank. This Fabian policy of the French generalissimo, General Joffre, is continued till the Germans are within striking distance of Paris (Sept. 2). The seat of the French government is transferred to Bordeaux September 3. The Allies now take the offensive, and, after the desperate **battle of the Marne** (Sept. 6-10), roll back the invaders to the Aisne. This marks the failure of the first offensive operations of the Germans. The German defensive is skillfully executed, and a rout is averted. In the middle of September the Germans make a stand in a strong natural position along the Champagne Hills — a range forming in the French military system the second line of French defense. Frontal attacks along a line stretching from Noyon to the Swiss frontier fail to dislodge the invaders, and the Allies attempt a vast turning movement, the opposing lines racing northward from Noyon into Belgium. The long-drawn-out **battle of the Aisne** (Sept. 11-28) becomes the battle of the Seven Rivers — the Aisne, Oise, Meuse, Moselle, Somme, Scheldt, and Lys.

To protect their rear the Germans lay siege to **Antwerp** on September 28. Its forts, the pride of the engineer, and deemed well-nigh impregnable — are reduced to ruins in about a week, and the Germans occupy the city on October 9. This marks the beginning of the second German offensive. The Belgian army, led by King Albert, manages to withdraw and join the Allied forces. Sweeping westward, the **Germans reach Ostend** on October 15, preparatory to a dash down the coast to Dunkirk, Calais, and Havre, as a means of severing the British lines of communication and opening the way for a second advance on Paris. But the Germans are checked before Dunkirk is reached, and the Allies, reënforced by British Indian and colonial troops, stubbornly hold their ground. Only a narrow strip of Belgium is clear of the invader. Week by week the battle sways along **a line over 300 miles in length**, but the close of the year sees no decisive victory on either side in the western field. Many irreplaceable monuments and works of art — the priceless dower of the ages — notably Louvain University Library and the cathedral of Reims, are ruined in the passage of the German forces.

Eastern campaign. The rôle of Russia is to assume a vigorous offensive in order to relieve the pressure on the Allies in the western arena. Mobilizing with surprising celerity, Russia invades **East Prussia**, penetrating within striking distance of Königsberg. Another Russian army crosses into **Galicia**, defeats the Austrians at **Lemberg** (Sept. 1), invests **Przemyśl**, and, sweeping the Austrian forces before it, presses westward to Tarnów and Cracow. The object of these movements is to clear its flanks, East Prussia and Galicia threatening Poland like two gaping jaws. Meanwhile a central army thrusts in the direction of Posen. The Germans send reënforcements and rout the invading Russians at **Tannenberg** (Aug. 29), driving them out of East Prussia to beyond the Niemen. A terrific counter-attack is made on the Russian center by combined German and Austrian forces, and the Russians are driven back deeper into Poland, General von Hindenburg pressing his advantage to the outskirts of **Warsaw**. On October 13, the Russian generalissimo, Grand Duke Nicholas, once more takes the offensive. The battle of the Marne is repeated on the Vistula, and the invaders retreat rapidly to the border. Again von Hindenburg strikes at Warsaw; again his army is rolled back by the Russians. On the northern flank the Russians follow up their victory at **Augustowo** (Oct. 4), and press the Germans in East Prussia. On November 17 a battle develops on the Vistula-Warthe front. The German left is practically surrounded by the Russians, but cuts its way through to **Lodz** (Dec. 8) with heavy loss. Strongly reënforced, the German line again establishes itself 25 miles west of Warsaw (Dec. 23). At the close of the year the Russian southern flank once more rests on the Carpathians, menacing Cracow, while their center in Poland holds in check the Austro-German invaders.

Austro-Servian campaign. The object of Austria is not only to crush Servia, but to gain possession of the railroad system which leads through Bulgaria to Constantinople. The Servians, supported by the Montenegrins, carry the fight into **Bosnia**. Driven back, the Servians twice recover. Again they are hurled back by the Austrians, this time almost to Nish, the new capital. **Belgrade**, which has held out for nearly three months, is occupied by the Austrians on December 2 (the 66th anniversary of Francis Joseph's accession). Twelve days later Belgrade is retaken by the Servians. The withdrawal of Austrian troops to Galicia is the signal for a swift offensive movement and the invaders are driven across the Danube and the Save. The invasion of Bosnia is resumed, and in January, 1915, Servian and Montenegrin forces are again advancing in the direction of Sarajevo.

Turkish campaign. German influence brings Turkey into the war, her entry being marked by the bombardment of Odessa by Turkish warships led by the cruisers *Goeben* and *Breslau*. The effect is to lay open the Russian provinces in Asia Minor and the British establishment in Egypt to attack, thus weakening the Allied attack against Germany and menacing the flow of commerce and reënforcements by way of the Suez Canal. The proclamation of a "jihad" or holy war is found to be calculated to embarrass the Allies by reason of their Mohammedan subjects. The Russian campaign in Asia Minor and the British campaign from Egypt are at first chiefly defensive against the German-led armies of Turkey. The **British occupy Busrah**, at the head of the Persian Gulf, November 21. **Cyprus** is formally annexed by the British November 5, and **Egypt** is proclaimed a British protectorate December 18. Turkish attempts to cross the Sinai peninsula are frustrated, while the Turkish invasion of the Caucasus in midwinter results in disaster, two army corps being wiped out by the Russians January, 1915.

Colonial campaigns. In the first four months of the war Germany is stripped of her possessions in China and the Pacific, and her hold on her African colonies is rapidly weakening. **Kiaochow** in China, first occupied by Germany in 1897, is wrested from her by a combined Japanese and British force after a siege of Tsingtau lasting for 77 days. This ends German sovereignty in the Far East. **In the Pacific**, Apia is occupied by New Zealand troops August 30, and the surrender of the German islands in the Samoa group follows; an Australian force seizes Kaiser-Wilhelmsland in German New Guinea in September, annexes the Bismarck Archipelago, and in December occupies Bougainville, the largest of the Solomon Islands. The Marshall Islands are seized by the Japanese October 7. **In Africa**, the conquest of Togoland is completed by a Franco-British force August 26, and fighting continues in the Kamerun, German East Africa, and German Southwest Africa. Some advance is made by the Germans in the Belgian Congo and in German East Africa.

Naval operations. German commerce is swept from the high seas by reason of the commanding superiority of the Allied fleets. The German fleet remains at its bases behind Helgoland and at Kiel; the Russian fleet, in the Gulf of Finland; the Austrian fleet, at Pola, Trieste, and Cattaro; and the Turkish fleet, in the Dardanelles. While naval actions during the first months of the war are relatively insignificant they are singularly fatal to the vanquished; as, for example, the British victories in Helgoland Bight on August 29, off the coast of Holland October 17, and off the Falkland Islands in the South Atlantic December 8, and the German victories in the North Sea on September 22 and off the Chilean coast November 1. Raids on the English coast are made by submarines, destroyers, and even by battle cruisers. On December 16, German warships bombard West Hartlepool, Scarborough, and Whitby, killing and wounding many people, chiefly women and children, and escaping in the mist. At the beginning of the war considerable damage is done to the Allied shipping by swift German cruisers, notably the *Emden* and the *Karlsruhe*.

The submarine plays an important part in the naval operations not only as a scout but in attack. The plan of the Germans is to keep their battleships in harbor, protected by mines, booms, and fortifications, and to reduce gradually the enemy's superiority by the use of submarines and mines. The submarine accounts for various British losses, notably, the three armored 12,000-ton cruisers *Aboukir*, *Cressy*, and *Hogue*, torpedoed by the German submarine *U 9* on September 22, the *Hawke* (7,350 tons) on October 15, the *Hermes* (5,000 tons) on October 21. A British submarine (*B 11*) enters the Dardanelles on December 13, passing under five rows of mines, and torpedoes the Turkish battleship *Messudieh*.

* Lit., "world politics"; specif., the German foreign policy of colonial expansion and maintenance of the "open door." † The State is Might. ‡ Pressure, or pushing, toward the East.

The principal **British losses** (in addition to those above mentioned) are the cruisers *Amphion* (3,440 tons), *Pathfinder* (2,940 tons), *Pegasus* (2,200 tons), *Monmouth* (9,800 tons), *Good Hope* (14,100 tons); dreadnought *Audacious* (25,000 tons); battleship *Formidable* (15,000 tons). To January 25, 1915, the British lose 20 warships, total tonnage 157,200.

The principal **German losses** are the cruisers *Kaiser Wilhelm der Grosse* (14,349 tons), *Mainz* (4,280 tons), *Köln* (4,280 tons), *Cap Trafalgar* (26,000 tons), *Hela* (2,000 tons), *Königsberg* (3,400 tons), *Yorck* (9,350 tons), *Emden* (3,540 tons), *Scharnhorst* (11,600 tons), *Gneisenau* (11,600 tons), *Leipzig* (3,250 tons), *Nürnberg* (3,450 tons), *Blücher* (15,550 tons). To January 25, 1915, the Germans lose 40 warships, total tonnage 181,147.

Aëronautical operations. The value of aircraft, especially for reconnoitering, is made manifest by all the belligerents. The employment of this extra "eye" changes the character of warfare, and battles virtually resolve themselves into long siege operations. Aëroplanes and airships are used in raiding hostile towns, and French and Belgian cities are damaged by bombs from German aircraft. French and British airmen raid Zeppelin sheds at Düsseldorf October 10; British naval aviators drop bombs on a Zeppelin plant at Friedrichshafen November 21 and December 15, on the Krupp gun works at Essen December 2, and on shipping at Cuxhaven December 25. On January 19, 1915, an aërial raid is made on Norfolk towns, the Germans dropping bombs close to the royal palace at Sandringham.

Cost in lives and treasure. It is estimated that over 18,750,000 men are engaged at a cost of $37,000,000 a day. The number of casualties to the end of the year is estimated at about 40 per cent. of the troops engaged.

GREAT BRITAIN.

1910. *Feb. 1.* **The parliamentary elections result** in the following composition of the House of Commons: Liberals, 274; Unionists, 273; Nationalists (Irish), 82; Laborites, 41. This gives the government a majority of 124 if aided by the Nationalists and Laborites.

Feb. 21. The King opens parliament. The **future position of the House of Lords** becomes the subject of bitter discussion because of the Lords' action in rejecting the 1909 budget. A long debate leads to the adoption by the Commons, on April 14, of a resolution that the Lords be disabled from rejecting or amending a money measure, and that any measure, under certain conditions, having been passed by the Commons in three successive sessions may become law without consent of the Lords.

April 17. Louis Paulhan flies from London to Manchester in a biplane, thus winning the $50,000 prize offered by the *Daily Mail*.

May 6. **King Edward VII. dies** at Buckingham Palace.

May 7. George, Prince of Wales, is proclaimed king as **George V.**

May 20. The funeral of King Edward follows the lying-in-state of the body for several days at Westminster Hall, and is marked by a most impressive procession through London.

July 29. Parliament modifies the oath of accession of the sovereign by omitting certain matter offensive to Roman Catholics.

Aug. 6. The battleship *Lion* of the superdreadnought class is launched. Her length is 700 feet, displacement 26,350 tons.

Nov. 18 & 22. Rioting by suffragettes, with attacks on the cabinet ministers, occurs in the streets of London.

Nov. 28. Parliament is dissolved, the government appealing to the country largely on the question of the veto power of the House of Lords. The elections are marked by unusual bitterness, and result in practically unchanged representation of the respective parties in the new parliament.

1911. *Feb. 1.* A writer for sensational newspapers, named Mylius, is convicted of **libeling King George V.** by printing a story that the King when a Prince had been married to the daughter of a British admiral at Malta. The scandal is completely disproved.

March 29. **Tercentenary of the authorized version of the Bible** is celebrated in London.

April 1. Oxford defeats Cambridge in the annual boat race, making a new record, 18 minutes, 29 seconds.

May 15. The House of Commons **passes the veto bill** by a vote of 362 to 241. See Feb. 21, 1910, and Aug. 10, 1911.

June 14–July 3. Strike of 20,000 seamen.

June 22. **King George V. and Queen Mary are crowned** in Westminster Abbey. There are three days of magnificent street parades and official functions, followed by a great naval review off the Isle of Wight. July 7, King George and Queen Mary visit Ireland. July 13, the investiture of Albert Edward as Prince of Wales takes place at Carnarvon Castle.

July 3. Eleven aviators cross the Channel from France to England in an international circuit race.

July 18. Centenary of Thackeray's birth is celebrated.

July 22–26. An aviation race around England and part of Scotland, 1010 miles, is won by Lieut. Jean Conneau ("Beaumont").

Aug. 10. **The House of Lords accepts the bill curtailing its veto power** so that it can only temporarily block measures desired by the Commons.

Yearly salary of £400 ($1946) is voted by the Commons to its members.

Aug. 17–20. General railway strike begins, involving 100,000 men.

Sept. 6. William Burgess, a Yorkshireman, swims the English Channel in 22 hours, 35 minutes.

Sept. 8. An experimental postal service by means of aëroplanes is operated for the first time.

Nov. 8. **Arthur J. Balfour retires as leader of the Unionist party. A.** Bonar Law succeeds him.

Nov. 11. King George and Queen Mary sail for India for the imperial durbar. On February 5, 1912, they land at Portsmouth on their return.

Nov. 21. Suffragettes break windows in the vicinity of the Houses of Parliament. More than 200 are arrested.

Nov. 27. Sir Edward Grey, foreign secretary, in the House of Commons explains Great Britain's attitude in the Moroccan controversy between France and Germany. See FRANCE.

1912. *Jan. 1.* **Government takes over entire telephone business** of the British Isles.

Jan. 29. Duke of Fife dies at Assuan, Egypt, following the shipwreck of the *Delhi* off Tangier in December.

Feb. 7. **Centenary of Charles Dickens** is celebrated throughout the English-speaking world.

Feb. 26. **Coal strike begins,** and within a week affects 1,000,000 miners. A **minimum wage** is the main issue. Government intervenes to bring about a settlement. Many industries are paralyzed. Railways and steamship companies maintain only a partial service. Thousands are out of work; cost of living increases daily. A Minimum Wage bill becomes law March 29, and the strike is declared at an end April 9. This strike is the greatest effort of organized labor in the history of trade unionism.

March 1. **Suffragettes smash windows** of London stores, and paralyze trade at busy hour. Many are arrested and sentenced to hard labor.

March 4. **Fifty suffragettes are arrested** in further window-smashing riots in London. British Museum, Royal Academy, and other likely objectives are closed.

March 5. The headquarters of the Women's Social and Political Union is raided for the arrest of the leaders in the window-smashing conspiracy.

April 1. Oxford defeats Cambridge in annual boat race on the Thames.

May 7. **Centenary of Browning** is celebrated in London.

May 20. **London dock laborers strike,** and on May 23 the whole of the London transport workers are called out. The strike lasts till July 27, intimidation and rioting being of daily occurrence.

May 29. At a conference at Malta, it is announced that the British naval base in the Mediterranean will be shifted from Malta to Gibraltar. That this change is due to the **Triple Entente** (Great Britain, France, and Russia) is confirmed in September, when it is announced that France will concentrate her naval strength in the Mediterranean.

June 15. The **National Insurance Act** goes into effect, meeting with opposition particularly among domestic servants and physicians.

June 20. The House of Lords holds it illegal to refuse Communion by reason of marriage with a deceased wife's sister.

June 26. **Alexandra Day** first celebrated by flower sale for charity.

July 1. **New Copyright Act** goes into force. First publication is required within the parts of the British Dominions embraced in the act, notwithstanding that there is "simultaneous" (= 14 days) publication elsewhere. The duration of the copyright is for the life of the author and 50 years after his death. After 25 years from the author's death (or in the case of a work in which copyright subsists at the passing of this act, 30 years) the work may be reproduced on payment of royalties.

July 30. The report on the loss of the *Titanic* is published, the Court attributing the disaster to excessive speed.

Aug. 26. Failure to answer signals of distress at sea is made a penal offense.

Aug. 27. Owing to excessive rainfall, **East Anglia is flooded**; in Norwich a square mile of streets is under water, thousands being rendered temporarily homeless. Many districts are cut off from railway communication.

Aug. 31. Centenary of the launch of the *Comet* (first passenger steamship continuously employed in Europe) is celebrated on the Clyde.

Sept. 4. Duke of Westminster's motor boat, *Maple Leaf IV.*, wins the International Harmsworth Cup at Huntington, Long Island, New York.

Sept. 28. **Ulster signs solemn covenant against home rule** for Ireland.

Oct. 11. The **Prince of Wales** begins residence as an **undergraduate at Magdalen College, Oxford.**

Nov. 30. An attempt to rescind amendment carried by opposition causes riot in Commons.

English tennis team wins the international Davis Cup at Melbourne, Australia.

Dec. 10–14. Strike of 10,000 railway employees in north of England, as a protest against disciplining an engineer charged with intoxication off duty.

Dec. 18. At a meeting of the Geological Society in London, the discovery is announced of the remains of a fossil man in Sussex. This **"Sussex man"** is thought to belong to the early Pleistocene period.

1913. *Jan. 1.* About 11,000 **London taxicab drivers strike,** as a protest against the increased price of petrol. Strike ends March 12.

Jan. 10. Trade returns for 1912 exceed all previous figures: imports $3,623,793,630; exports $2,914,844,339.

Jan. 13. Railway and Canal commissioners award the National Telephone Company £12,515,264 ($60,905,532) for transfer of its business to the State.

Jan. 16. **Home Rule for Ireland bill** passes House of Commons. This is the third to be introduced, and the second to find favor in the Commons. The bill is rejected by the House of Lords by a vote of 326 to 69 on January 30.

Jan. 25. **Woman's suffrage** amendment to the Franchise bill is ruled against by Speaker of House of Commons. The bill is withdrawn and the militant suffragists resort to violent tactics. Incendiarism and bomb outrages figure prominently in the campaign against personal property. Mail is destroyed in the letter boxes, railway carriages are burned, golf links are damaged, and by countless methods the attempt is made to intimidate or coerce the government into granting "votes for women." To combat the **hunger-strike,** more or less successfully adopted by convicted suffragettes, the government passes a bill (the "Cat and Mouse bill") for the reincarceration of suspended prisoners after their recovery from the effects of self-imposed starvation.

Feb. 5. Welsh Church Disestablishment bill passes House of Commons, but is rejected by House of Lords February 15.

March 13. Oxford defeats Cambridge in annual boat race on the Thames.

In March. Committee of inquiry is appointed to investigate the purchase of Marconi shares by members of the cabinet. Public feeling runs high, but the investigation proves that ministers are not guilty of corruption.

April 3. Mrs. Emmeline Pankhurst, suffragette leader, is sentenced to three years penal servitude for inciting to malicious destruction of property.

April 21. The Cunard liner *Aquitania,* 47,000 tons, largest steamship ever built in the United Kingdom, is launched at Glasgow.

May 1. **Home Rule for Ireland bill** is reintroduced in Commons. Ulster unionists are uncompromisingly opposed to the measure, and threaten civil war should the bill become law.

Employment of nonunionists causes strike of 50,000 miners in South Wales. Strike is settled May 15.

May 31. Arbitration treaty with United States is renewed.

June 4. A militant suffragette rushes on race course during the Derby, and throws the King's horse. The suffragette is fatally injured.

June 11. Treaty with Japan is renewed.

June 24. Prince of Wales welcomes President Poincaré of France on landing at Southampton on an official visit.

July 12. **Demonstration by** over 150,000 **Ulstermen** under the leadership of Sir Edward Carson takes place at Craigavon; it is resolved "to make and complete all preparations necessary for resisting by force and every other method the decrees or other executive acts by or on behalf of any Nationalist Parliament that may be established." The enrollment of the **Ulster Volunteer Force** is begun, arms are smuggled into Ireland, and by the end of the year over 100,000 men are enlisted.

July 15. House of Lords rejects the Irish Home Rule bill for the second time during present parliament.

July 16. **Robert Bridges is appointed poet laureate,** to succeed the late Alfred Austin.

Aug. 15. Memorial column commemorating the departure of the Pilgrims is unveiled at Southampton by the United States ambassador.

Aug. 26. **Irish transport workers strike** in Dublin; many pitched battles with police ensue. Strike collapses January 19, 1914.

1913. *Sept. 24.* At Belfast, the Ulster Unionist Council approves the plan for setting up a provisional government in Ulster in the event of the Home Rule bill becoming law.

Oct. 14. In a colliery explosion at Cardiff, 417 miners lose their lives.

Oct. 21. Sir Rufus Isaacs is inaugurated Lord Chief Justice, an office for the first time in English history held by a Jew.

Dec. 5. The government prohibits the importation of arms and ammunition into Ireland, in consequence of Protestant antagonism to the Home Rule bill and Ulster's warlike preparations.

1914. *Jan. 1.* The laying of the telephone cable between Nevin in Carnarvonshire, and Howth, near Dublin (a distance of 74 miles) is accomplished. It is the longest telephone submarine cable yet laid.

Jan. 9. Foreign trade returns for 1913 reach the highest totals on record: imports $3,741,047,607, exports $3,089,353,116.

Jan. 16. British submarine *A 7*, with eleven officers and men, dives in Whitesand Bay off Plymouth and fails to come to the surface.

March 9. Premier Asquith announces the government plan of compromising the Irish Home Rule question by allowing Ulster counties to exclude themselves for six years from the provisions of the act. Bonar Law, leader of the opposition, and Sir Edward Carson, leader of the Ulster Orangemen, reject the government proposals.

March 28. Cambridge defeats Oxford in annual boat race on the Thames.

April 2. Yorkshire coal strike for minimum wage affects 170,000 workers.

May 12. Premier Asquith pledges the government to introduce an amendment to the Home Rule bill, if that measure becomes a law.

May 19. **Welsh Church Disestablishment bill** passes the Commons, and is the **first measure to become law without consent of the Lords.**

May 25. **Home Rule for Ireland bill** passes House of Commons for the third time, and will become law without the approval of the Lords.

June 11. Coronation chair in Westminster Abbey is damaged by a bomb, alleged to have been placed by a militant suffragette.

July 2. Joseph Chamberlain, eminent statesman, dies in his 79th year.

July 19. King George calls an informal conference in an attempt to reach a solution of the Home Rule question. Conference ends in failure July 24.

July 25. Keys of **Sulgrave Manor, ancestral home of the Washington family**, are handed to Ambassador Page, as first formal ceremony in celebration of the peace centennial between Great Britain and the United States.

July 26. Four persons are killed in Dublin and many wounded in an attempt by troops and police to seize a consignment of 1,000 rifles landed by the Nationalist Volunteers from a yacht off Howth.

Aug. 4. **Ultimatum is sent to Germany** in regard to Belgian neutrality. The ultimatum remaining unanswered at the end of the time limit, Great Britain declares war on Germany. See GERMANY. The Great War.

Sir John Jellicoe takes command of British fleet.

Aug. 5. Prince of Wales issues appeal for a national relief fund, and $5,000,000 is subscribed in the first week.

Bank rate is raised to ten per cent., but is quickly reduced to six and then to five per cent.; treasury notes for £1 and 10s. are issued, and postal orders become legal tender. A moratorium is declared, and lasts till Nov. 4.

Lord Kitchener becomes secretary of state for war.

Aug. 6. House of Commons passes a second war budget of $500,000,000, and authorizes an army increase of 500,000.

Aug. 10. Suffragettes abandon militant measures and declare they will help the government in the war.

Aug. 12. Government accepts offers of men and warships from Canada, Australia, and New Zealand.

Great Britain declares **war on Austria-Hungary.**

Sept. 5. England, France, and Russia agree not to make peace separately.

Sept. 15. John Redmond issues a manifesto, calling upon the Irish people to take their part in the burdens and sacrifices imposed by the war.

Sept. 18. King George signs the Irish Home Rule and Welsh Church Disestablishment bills; Parliament is prorogued.

Oct. 30. Admiral Prince Louis of Battenberg resigns as First Sea Lord of the Admiralty and is succeeded by Admiral Lord Fisher.

Nov. 2. Admiralty declares the North Sea a "military area," on account of numerous German mines having been laid.

Nov. 5. Great Britain formally annexes **Cyprus,** a Turkish island administered by the British since 1878.

Great Britain declares **war on Turkey** "owing to hostile acts committed by Turkish forces under German officers."

Nov. 6. Carl Hans Lody, a German spy, is shot in the Tower of London.

Nov. 14. Field Marshal Earl Roberts dies at the headquarters of the British army in France. He is buried in St. Paul's Cathedral November 19.

Nov. 16. House of Commons unanimously votes an additional war credit of $1,250,000,000, and authorizes the enlistment of a million more men. The war costs Great Britain $5,000,000 a day.

Nov. 29–Dec. 5. King George visits the British forces at the front.

Dec. 18. French protectorate over Morocco, as defined by the Franco-Moroccan treaty of 1912, is formally recognized by Great Britain.

Dec. 31. New decoration, the Military Cross, is instituted.

1915. *Jan 1.* Metric system of weights and measures becomes the standard for drugs, being now adopted in the British pharmacopœia.

Jan. 5. London **Stock Exchange reopens;** closed since July 30, 1914.

Feb. 17. Baron Wimborne takes office as Lord Lieutenant of Ireland, succeeding the Earl of Aberdeen.

For the Great War, see GERMANY.

BRITISH COLONIES, POSSESSIONS, AND DEPENDENCIES.

AUSTRALIA, COMMONWEALTH OF.

1910. *In April.* A referendum provides for a readjustment of revenue distribution, necessitated by the growing government expenditures. The **new labor ministry,** under the premiership of **A. Fisher,** is sworn in April 29.

1911. *Jan. 1.* Canberra, New South Wales, is formally approved as the site of the **new federal capital.**

March 1. Lord Denman is appointed governor-general.

May 1. Rate of postage to all parts of the British Empire is reduced from four cents to two cents the half-ounce.

July 1. **Compulsory military and naval service inaugurated;** 105,000 boys between the ages of 14 and 18 come under immediate discipline.

1912. *Feb. 27.* The Arbitration Court settles the Brisbane tramway strike, allowing the men to wear the Association badge on duty.

1912. *Aug. 23.* Commonwealth parliament passes **Defense bill,** appropriating $26,075,000 for naval and military expenses, and fixing a maximum fine of $25 for evasion of military service.

Sept. 14. The **Trans-Australian Railway,** linking Western Australia with the rest of the Commonwealth, is inaugurated by the governor-general.

1913. *Jan. 8.* Alfred Deakin, three times prime minister of the Commonwealth, resigns the leadership of the federal opposition, and is succeeded by Joseph Cook January 20.

March 12. The first stone of the **new federal capital at Canberra** is laid by the governor-general. The city design is by an American architect, W. B. Griffin of Chicago, who won this honor in open competition.

June 20. Federal cabinet of Andrew Fisher resigns as, in consequence of the Liberal victories at the polls, the Labor party loses its majority in lower house. On June 21, Joseph Cook, Liberal party leader, is invited by the governor-general to form new cabinet.

Aug. 27. Dr. Douglas Mawson, leader of the **Australasian Antarctic expedition,** has been rescued with his companions after most severe hardships. The outcome of the expedition is to define about 1000 miles of the coast line of Antarctica, to shed light on the glacial features, geological structure, and occurrence of economic minerals, and to supply new data concerning terrestrial magnetism. See Feb. 26, 1914.

Oct. 4. The new **Australian naval squadron** arrives at Sydney amid great enthusiasm. This fleet 'unit' is manned by Australians and is for service in local waters except in time of war, when it would be available on behalf of the Empire.

1914. *Feb. 10.* Sir Ronald Munro-Fergusson is appointed governor-general.

Feb. 26. Australasian Antarctic expedition under Dr. (afterwards Sir) Douglas Mawson reaches Adelaide after two years and three months absence.

Aug. 3. Government offers 20,000 men for the war in Europe.

Sept. 8. Andrew Fisher succeeds Joseph Cook as prime minister, and forms new cabinet.

Sept. 11–25. Australian expedition **seizes Kaiser-Wilhelmsland** in German New Guinea. **Bismarck Archipelago** is also seized. See GERMANY.

Nov. 1. Australia sends second contingent of 10,000 troops to England.

Dec. 31. Australian forces take Bougainville, largest of the Solomon Islands.

1915. *Jan. 20.* Seat of government is transferred temporarily from Melbourne to Sydney.

For the Great War, see GERMANY.

BRITISH WEST AFRICA.

1914. *Jan. 1.* The **amalgamation of Northern and Southern Nigeria** goes into effect, Sir Frederick Lugard being made governor-general of the Colony and Protectorate of Nigeria.

BRITISH SOMALILAND.

1910. *April 3.* News is received that the **"Mad Mullah"** has committed many outrages, murdering hundreds of natives and destroying many villages. A punitive expedition is dispatched.

1913. *Aug. 9.* Camel constabulary and certain native levies are attacked by Dervishes, losing 36 killed, including the commandant.

CANADA, DOMINION OF.

1910. *March 10.* **Naval defense bill** after much opposition is passed. It provides for a naval college, and for a fleet under Canadian control but at the disposal of the empire in case of emergency, and calls for the construction of five cruisers and six destroyers.

May 5. The international waterways treaty with the United States is ratified. See UNITED STATES, May 5, 1910.

In May. A radical **antitrust bill** is passed. It provides a board of three to investigate monopolies, and empowers the government to withdraw tariff protection where monopoly is proved or to impose a fine of $1000 a day so long as the abuse persists.

July 12. Campbellton, New Brunswick, is largely destroyed by fire.

Aug. 18. The census bureau estimates the population as 7,500,000.

Sept. 6. International Eucharistic Congress opens at Montreal with a great attendance of Roman Catholic dignitaries.

1911. *Jan. 29.* Duke of Connaught is appointed governor-general to succeed Earl Grey. He is installed October 13.

Feb. 22. **Political loyalty** to the Mother Country is formally declared by Parliament.

April 4. **Surplus of $30,000,000,** the highest in Canadian history, is announced by Mr. Fielding in his budget speech.

July 29. Sir Wilfrid Laurier advises that Parliament be dissolved, the main issue in the succeeding election being the proposed reciprocity agreement with the United States.

Sept. 21. In the general elections the Conservatives, who have opposed reciprocity, win 126 seats, the Liberals securing only 80. The Nationalists (allied with the Conservatives) win 8, while one Labor representative and one Socialist are also returned. The Liberals had been in power for fifteen years. **Robert Laird Borden** is the new premier.

Nov. 16. Twelfth Canadian Parliament is opened.

1912. *Feb. 22.* In Canada, in the Hebert case (where a marriage of two Roman Catholics performed by a Protestant minister is annulled by the Archbishop and the dissolution is ratified civilly by the High Court), Judge Charbonneau, of the Superior Court, decides that any qualified officer can marry people of any religious faith, and that the **Ne Temere** decree has no civil effect. This judgment, in effect, declares that the canon law of the Roman Catholic Church is not binding in the State.

April 9. **Trade agreement between Canada and the West Indies** is signed at Ottawa, to go into effect January 1, 1913.

June 6. Cobalt, a mining town in Ontario, is practically destroyed by a fire that originated in a theater.

June 17. The Supreme Court of Canada holds that the Federal Parliament is incompetent to pass a general marriage law for the Dominion. This decision is confirmed by the judicial committee of the Privy Council, July 29.

June 26. Manitoba reports a loss of $1,000,000 by forest fires.

June 30. Many persons are killed and injured during a **cyclone** at Regina, Saskatchewan; estimated damage, $1,000,000.

Dec. 5. Mr. Borden introduces a bill providing for a Canadian contribution of three battleships to the imperial navy.

1913. *April 24.* The **closure** is adopted in the Canadian House of Commons, its provisions being adopted for the first time on May 8.

April 28. Severe earthquake shock is experienced at Ottawa, damaging the Dominion observatory.

May 1. Canadian steamers are given monopoly of the mail service between Canada and Great Britain.

May 29. The Senate rejects **naval bill** (passed by the Commons May 15) appropriating $35,000,000 for three warships to be donated to the imperial navy. The discussion of this measure has been marked by bitter party conflict.

Aug. 14. Serious rioting breaks out in Vancouver Island as the result of a miners' strike; troops are sent to restore order.

In October. The lowering of the United States tariff (see UNITED STATES, Oct. 3, 1913) is followed by demands in the Liberal press for the abolition of taxes on foodstuffs, and a wide reciprocity in natural products between Canada and the United States.

1914. *Jan. 21.* Lord Strathcona and Mount Royal, High Commissioner for Canada since 1896, dies in London.

Feb. 2. **Parcel post** system is inaugurated.

April 7. Last link between eastern and western divisions of Grand Trunk Pacific Railway is completed, thus forming a second coast-to-coast route.

May 7. Prince Alexander of Teck is appointed governor-general, succeeding the Duke of Connaught. See Aug. 25.

May 23. The question of the admission of East Indians is complicated by the arrival of a vessel at Vancouver with 375 Hindus. They are forbidden to land. Litigation ensues, and the Hindus are deported July 22.

May 29. The *Empress of Ireland*, from Quebec to Liverpool, collides with the Norwegian collier *Storstad* during a fog in the St. Lawrence River, and sinks within fifteen minutes; 1024 lives are lost, and 452 are saved.

June 19. Over 200 miners are killed by a coal mine explosion in Alberta.

Aug. 11. In addition to the offer of troops and two submarines, accepted by the Home government, Canada offers 1,000,000 bags of flour. Government of Alberta offers 500,000 bushels of oats and a quick-firing battery. Aug. 18, British Columbia Fruit Growers' Association offers 100,000 barrels of apples for the British troops. See GERMANY. The Great War.

Aug. 25. It is announced that the Duke of Connaught will remain in Canada as governor-general during the continuance of the war.

In September. The call to arms results in a first contingent of 33,800 men, which sails from Halifax for England September 20.

Oct. 7. Government decides to double its **contribution of men and material** to the British force, to keep 30,000 volunteers continuously in training, and to dispatch successive units to the front at intervals.

Oct. 8. Canada sends second expeditionary force of 10,000 to Europe.

1915. For the Great War, see GERMANY.

EGYPT.

1910. *Feb. 21.* The **premier,** Boutros Pasha Ghaly, dies. He was **shot by** a Nationalist student because of his sympathy with the British.

1911. *July 15.* **Lord Kitchener is appointed British agent** in Egypt, succeeding Sir Eldon Gorst.

Sept. 21. **Arabi Pasha,** Egyptian revolutionary leader, **dies at Cairo.**

1912. *Jan. 26.* Khartum cathedral is consecrated by the Bishop **of London.**

July 3. Several Nationalists are arrested at Cairo for **conspiracy against** the Khedive, Lord Kitchener, and the prime minister.

1913. *Dec. 29.* Védrines, French aviator, completes his flight from Paris to Cairo by way of Vienna, Sofia, Constantinople, and Beirut.

July 21. Sweeping **changes in the parliamentary system** are announced. The Legislative Council and the General Assembly are to be amalgamated into one chamber (Legislative Assembly) of 89 members, of whom 66 are elected on a democratic basis, while a system of nominated members secures representation of minorities.

1914. *July 25.* Khedive is shot at by an assassin and slightly wounded.

In November. See GERMANY. The Great War.

Dec. 18. **British protectorate is proclaimed,** with Prince Hussein Kamel (uncle of the deposed Khedive, Abbas Hilmi) as Sultan, thus terminating the Turkish suzerainty. France formally recognizes the protectorate. Lieut.-Colonel Sir Arthur Henry McMahon is appointed High Commissioner.

1915. For the Great War, see GERMANY.

INDIAN EMPIRE.

1910. *Feb. 28.* Imperial council passes a bill to suppress **anarchistic literature.**

June 10. **Baron Hardinge of Penshurst** is appointed to succeed Lord Minto as **viceroy.** The year is marked by **native unrest.**

1911. *Aug. 29.* The Nizam of Hyderabad, the most distinguished of the ruling chiefs, dies at Simla, aged 45.

Dec. 12. King George V. is proclaimed Emperor of India, at **a great durbar** held by him and Queen Mary at Delhi. This is the **first time a British sovereign has visited the Indian Empire.** It is announced that the capital of India will be removed from Calcutta to Delhi, also that hereafter Indians will be eligible for the Victoria Cross.

1912. *Jan. 10.* The King Emperor and Queen Empress sail from Bombay, their visit being generally regarded as a triumphant success.

April 1. The **reconstituted provinces of Bengal, Assam, Bihar, and Orissa come into existence.**

Dec. 23. During the State entry into Delhi, a **bomb is thrown at** the elephant on which **the viceroy** and Lady Hardinge are riding. The viceroy and one attendant are wounded, and one attendant is killed.

Dec. 30. The **Indian National Congress** already shows the effects of the enlarged Legislative Councils. The annual session has been thinly attended, and public interest in its academic discussions is on the wane.

1913. *Jan. 27.* First assembly of the Legislative Council in Delhi is opened by Lord Hardinge, the viceroy.

Aug. 2. Serious **rioting** takes place **at Cawnpore** owing to the demolition of an outbuilding belonging to a Mohammedan mosque in the construction of a new roadway. Mohammedan India is soon aflame with indignation, and the excitement does not subside till the viceroy visits Cawnpore, arranging to rebuild the structure, and to free the rioters awaiting trial.

Oct. 3. Failure of the Credit Bank of Bombay and other native banks produces a financial crisis in Western India.

Nov. 13. Nobel prize for literature is awarded to the Hindu poet Rabindranath Tagore.

In November. Indian unrest is aggravated by the grievances of the Indians in South Africa, and by the undetermined status of Indians in the Empire generally. **Political crime** is on the increase, especially in Bengal.

1914. *In August.* Maharaja of Mysore offers 50 lacs of rupees ($1,622,150), as well as his troops, for the use of the British in the Great War. **Offers of money and service** are made by all the ruling princes. See GERMANY.

In September. Native and British troops embark for the war. By the end of the year over 200,000 are engaged in Europe, Egypt, and elsewhere.

Dec. 1. Wheat exports are restricted to 100,000 tons from December 1 to March 31, 1915, and are to be confined to British possessions, in view of abnormal prices due to the war.

1915. For the Great War, see GERMANY.

NEWFOUNDLAND.

1910. *Sept. 7.* The Newfoundland fisheries' dispute between the United States and Great Britain is decided by the Hague Tribunal, as follows:

(1) Regulations may be made without the consent of the United States, if not prejudicial to American interests. (2) U. S. fishing vessels may engage an alien crew. (3) In entry requirements, harbor dues, etc., U. S. vessels must not be discriminated against. (4) U. S. vessels have the right to enter certain bays or harbors for shelter, repairs, wood, and water. (5) The whole extent of a bay from headland to headland is within territorial waters. (6) U. S. fishermen have the right to fish in the bays, harbors, and creeks. (7) U. S. fishing vessels have the usual commercial privileges, but these must not be exercised concurrently with their fishing privileges.

1912. *Nov. 15.* New treaty is signed by Canada, Newfoundland, and the United States relating to American fishing rights as determined by the Hague Tribunal.

1913. *Nov. 7.* Elections result in the return of Sir E. P. Morris's government.

1914. *In August.* Offers of troops are made to England. See GERMANY.

1915. For the Great War, see GERMANY.

NEW ZEALAND, DOMINION OF.

1910. *June 22.* **Lord Islington** succeeds Lord Plunkett as **governor.**

In July. Law legalizing bookmaking (race-track betting) is repealed.

1911. *Aug. 27.* Parliament is opened. The premier, Sir Joseph Ward, is bitterly attacked for accepting a baronetcy.

Dec. 22. The final balance of parties after the elections is: Ministerialists 37, Opposition 37, Labor 4, Independents 2.

1912. *March 20.* Sir Joseph Ward resigns the premiership, T. McKenzie succeeding him.

April 1. The *Terra Nova*, the vessel of the **British Antarctic Expedition,** returns to Akaroa and reports that Captain Robert Falcon Scott is still advancing and will remain another winter in the Antarctic.

July 9. The premier, T. McKenzie, resigns, and a new ministry is formed by F. W. Massey.

Aug. 3. **Lord Liverpool** succeeds Lord Islington as **governor.**

1913. *Feb. 10.* The *Terra Nova* returns from the Antarctic with the tragic news that **Captain Scott and four of his companions perished on their return journey from the South Pole,** which they had reached on January 18, 1912. The party perished on or about March 29, 1912, the bodies being discovered by the relief expedition on January 18, 1913.

In July. **Defense Act** is passed making military training compulsory on all male citizens between the ages of 12 and 25 (in cadet corps 12–18, territorial 18–25), with short periods of training in the field.

Dec. 5. **Naval bill** is passed, providing for a fleet to be under the administration of the Dominion Government, except in time of war.

1914. *Aug. 30.* **German Samoa is occupied** by New Zealand troops. See GERMANY. The Great War.

Oct. 16. New Zealand troops depart for Egypt and England.

1915. For the Great War, see GERMANY.

SOUTH AFRICA, UNION OF.

According to the "South Africa Act" approved September 20, 1909, the Colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange River Colony are united on May 31, 1910, in a legislative union called the **Union of South Africa,** the colonies becoming provinces with the names Cape of Good Hope, Natal, Transvaal, and Orange Free State.

The executive power is vested in the King of Great Britain, who appoints a governor-general as his representative in the Union. An executive council including not more than ten ministers of state is appointed by the governor-general. A minister may not hold office longer than three months unless he is or becomes a member of one of the houses of parliament.

The legislative power is vested in a parliament consisting of the King, the Senate, and the House of Assembly. Parliament meets at least once in every year at the call of the governor-general, who may prorogue the House of Assembly and Senate simultaneously, or the House of Assembly alone. (The Senate may not be dissolved within the first ten years of the Union.) The **Senate** consists of 40 members, eight nominated for ten years by the governor-general, and eight senators elected for ten years by the legislature of each province. Each senator must be a British subject of European descent, and at least thirty years of age, qualified to vote in one of the provinces, and resident for five years within the Union. Elected senators must own property of £500. After ten years, the make-up of the Senate may be determined by the parliament. The **House of Assembly** consists of fifty-one members from Cape of Good Hope, seventeen from Natal, thirty-six from Transvaal, and seventeen from Orange Free State. They are chosen directly by the voters, and must be British subjects of European descent, qualified voters, and resident within the Union for five years. Every House of Assembly continues for no more than five years, but may be sooner dissolved by the governor-general.

Bills appropriating revenue or moneys or imposing taxation must originate in the House of Assembly, but must be recommended by the governor-general. Bills rejected by the Senate, if again passed by the House at another session and again rejected by the Senate, may be submitted to a joint session of both bodies and if then passed become a law. Bills to become laws must be assented to by the governor-general, but the King may disallow any law within one year of its being assented to by the governor-general.

The **judges of the supreme court** are appointed by the governor-general. From their decision no appeal may be taken to the King in council unless the King grants special leave therefor in accordance with the laws passed by the Union parliament.

The chief executive officer of each province is an administrator appointed

by the governor-general in council. Free trade between the provinces is established; both English and Dutch are official languages on an equal footing.

Pretoria is the seat of government. Parliament meets at Cape Town.

1910. *May 30.* The first cabinet of the **Union of South Africa** is formed by Gen. Louis Botha, who is premier and minister of agriculture.

May 31. A royal proclamation establishing the **Union of South Africa** is read in public at Pretoria. Lord Gladstone is governor-general.

Sept. 15. The elections for the parliament result in the return of 67 Nationalists, 37 Unionists, 13 Independents, and 4 Laborites. Gen. Botha is defeated, but announces that he will retain the premiership.

Nov. 4. First parliament of the Union of South Africa is formally opened by the Duke of Connaught.

Dec. 13. The De Beers Company gives $125,000 towards the founding of a South African university.

1911. *Feb. 4.* **A. Piet Cronje,** Boer general and statesman, **dies.**

April 25. The **first Union parliament ends,** after a session of 98 days. It has abolished the Cape income tax and the Natal poll tax.

Dec. 7. The **Afrikander Bond is dissolved** by agreement, and its junction with the **new South African Party** is announced.

1912. *June 14.* The **South Africa Defense Act** becomes law, every citizen between the ages of 17 and 60 being liable to render personal service in time of war, and those between 21 and 25 having to undergo a prescribed peace training either with the Active Citizen Force or in a rifle association. Existing volunteer corps are to be embodied in the Active Citizen Force.

July 5. The memorial to Cecil Rhodes on Table Mountain is dedicated by Earl Grey.

Nov. 6. A diamond, 1640 carat, the largest in the world, is found at Johannesburg: said to be of poor quality.

Dec. 14. Gen. Louis Botha resigns the premiership of the Union of South Africa, but is invited by the governor-general to form new ministry.

1913. *In June.* **Rand miners' strike** breaks out, attended by rioting and bloodshed. A climax is reached in Johannesburg on July 4, when the police and military fire on the mob and over 270 casualties, including many killed, are reported. On July 5, martial law is proclaimed; government officials effect a reconciliation and the men gradually resume work.

In November. A **strike of Indian workers** in Natal, arising from race discrimination, cripples various public services. The strike is the outcome of the growing hostility against the Immigrants' Regulation Act passed by the South African Parliament earlier in the year. Sporadic rioting occurs, and some Indians are killed.

1914. *In January.* Strike of Transvaal railway men (declared January 8) spreads into Orange Free State, Cape of Good Hope, and Natal, and develops into a **general labor war throughout South Africa.** A general strike is proclaimed by the Trades Federation on January 13, the Rand miners joining the movement. **Martial law,** declared in the Transvaal on January 10, is now proclaimed throughout the Union of South Africa, over 100,000 men of the citizens' defense force being rapidly mobilized. The enthusiasm with which the call to arms is obeyed is due to the fact that a protracted strike would result in the repatriation of the Rand natives, and that the consequent difficulty of inducing them to return to the mines would cause paralysis of the mining industry — the mainstay of South Africa. The railway service is disorganized, but the display of armed force is effective in checking serious disorders. Wholesale arrests are made, especially of strike leaders. Feeling runs high between the government's supporters and the strikers. On January 16, the strikers drift back to work. Nine of the labor leaders are deported.

March 19. Elections result in a sweeping victory for the Laborites.

Aug. 10. Small force from German Southwest Africa invades Cape Colony. General Botha, the premier, sends troops to operate against the invaders and defeats the Germans at Raman's Drift, near the boundary, September 14.

Sept. 6. Sir Sydney (afterwards Viscount) Buxton, the new governor-general, arrives at Cape Town.

Sept. 15. General **Beyers,** Boer war veteran, resigns command of Union Citizen Army and is succeeded by General Botha September 22.

In October. A Boer **revolt** led by Lieut. Col. S. G. Maritz breaks out near the border of German Southwest Africa. Martial law is proclaimed throughout the Union October 13. General **De Wet**, Boer veteran, and Beyers join the revolt, and operate in the north of the Orange Free State and in the western Transvaal. Beyers is routed by Gen. Botha October 29, and several rebels surrender.

Nov. 11. De Wet's force is captured by Gen. Botha, but De Wet escapes and is captured in Orange Free State December 2.

Dec. 4. General Botha's sweeping operations culminate in the capture of 700 rebels and the surrender of 200 more.

Dec. 9. Beyers is killed at the Vaal River, Transvaal.

Dec. 10. Viscount Buxton, governor-general of the Union, declares that "in all 7,000 rebels have surrendered," and that "the **revolution is at an end.**" "Now more than ever," states Botha, "it is for the people of South Africa to practice the wise policy of forgive and forget."

1915. For the Great War, see GERMANY.

GREECE.

1910. *Jan. 31.* A new ministry is formed under M. Dragoumis. Col. Zorbas, the leader of the Military League, which has created the political overturn, is minister of war.

Feb. 2. Greece declares that Crete shall not send delegates to the Grecian National Assembly to be held for revising the constitution.

March 30. The King decrees the **revision of the constitution,** thus terminating the régime of the Military League.

Sept. 14. The king opens the **new National Assembly.** The session proves abortive, and on the dissolution, October 23, M. Venizelos, the Cretan leader, is requested to form a cabinet.

1911. *In June.* **Revision of the constitution,** the outcome of the military revolution of August, 1908, is completed and **adopted** by the Chamber. The changes make for judicial and administrative reform, and increased military and naval efficiency. A council of state is also established.

1912–1913. For Balkan War, see TURKEY.

1913. *Feb. 15.* **Island of Crete is handed over to Greece** by the protecting powers (Great Britain, France, Russia, Italy). Captured by Turks 1669; semi-independent government set up 1898; declared part of Hellenic kingdom October, 1912.

March 18. **King George is assassinated** at Saloniki, and is succeeded by Crown Prince Constantine, popular on account of his victorious leadership during the Balkan war.

April 2. Funeral of King George takes place at Athens.

June–August. For Second Balkan War, see BULGARIA.

Nov. 13. Treaty of peace is signed at Athens, ending the war with Turkey.

1913. *Dec. 14.* The island of Crete is annexed to Greece with imposing ceremonial, King Constantine hoisting the Hellenic flag over the Kanea fort.

1914. *June 13.* Annexation of Chios and Mitylene is announced.

July 8. United States battleships *Idaho* and *Mississippi* are purchased.

HAITI.

1911. *Jan. 17.* Peace convention, withdrawing troops from the frontier, is signed with the Dominican Republic.

Feb. 2. A revolution breaks out in the north.

Feb. 21. Protest against the general execution of Haitian revolutionists is received from the United States.

July 5. A **joint note** is submitted by the United States, Great Britain, France, Germany, and Italy, **insisting on prompt settlement** of claims.

Aug. 2. President Simon flees from Port-au-Prince to a Haitian gunboat, leaving the capital in the hands of the insurgents.

Aug. 16. Gen. Leconte is inaugurated president.

1912. *May 22.* France protests against enforcement of **anti-Syrian law.**

May 24. Government guarantees payment of debts owing Syrians.

Aug. 8. The National palace at Port-au-Prince is blown up and **President Cincinnatus Leconte is killed.** Tancrède Auguste is chosen president.

1913. *May 2.* President Auguste dies; Michel Oreste is elected, May 4.

Oct. 1. By act of Congress, the **national monetary unit** is the gold gourde of the exact weight and fineness of the quarter of a United States gold dollar; the existing paper currency is to be withdrawn. The new currency goes into circulation January 1, 1914.

1914. *In January.* **Revolution** in the northern provinces, headed by Davilmar Théodore, an exiled senator, assumes serious proportions. Another insurrection, led by Oreste Zamor, breaks out in the city of Gonaïves, 65 miles from Port-au-Prince. On January 27, President Oreste abdicates, and seeks refuge on a German battleship.

In February. General **Oreste Zamor** enters Port-au-Prince and is **elected president** February 8.

March 1. United States recognizes the new government.

May 6. Great Britain demands payment of an overdue claim awarded by a court of arbitration to a British subject for damages received during an uprising. A British cruiser arrives, and the government authorizes payment.

Oct. 19. American marines are landed at Cap-Haïtien to maintain order after revolutionists seize the city. President Zamor takes flight.

Oct. 22. Gen. **Davilmar Théodore**, revolutionist leader, proclaims himself president. He is elected by Congress November 7.

Nov. 8. United States marines leave Cap-Haïtien.

HONDURAS.

1910. *Aug. 9.* Attempted revolt against the government fails, an expedition under General Bonilla taking refuge in Guatemala.

1911. *Jan. 10.* A treaty is concluded by which the United States guarantees a loan without the assumption of a financial protectorate. On February 15, an American loan of $7,500,000 is contracted for.

Feb. 9. President Dávila and the revolutionary leader, General Bonilla, agree to an armistice at the suggestion of the United States.

1912. *Feb. 2.* Gen. Manuel Bonilla assumes the presidency.

Feb. 9. United States marines are landed to protect American property.

March 1. José María Villadares, a Honduran rebel, invades the country from San Salvador, and captures the town of Aramecina.

July 11. **Extradition treaty** is signed **with United States.**

Nov. 7. Villadares is killed in uprising near Ojojona.

1913. *March 21.* President Bonilla dies; Vice President Francisco Bertrand succeeds to presidency.

1914. *March 9.* Business section of La Ceiba is destroyed by fire.

ITALY.

1910. *March 21.* Disagreement over a **ship subsidy bill** wrecks the cabinet of Premier Sonnino, but the bill is later passed (May 28) as a temporary measure under Premier Luzzatti.

March 24. **Mount Etna** bursts into **violent eruption,** continuing for weeks. Many villages suffer great damage from the flow of lava.

Sept. 20. A speech by Mayor Nathan of Rome on the anniversary of the entry of Italian troops into Rome intensifies the contest between the government and the Vatican.

Sept. 23. George Chavez, a Peruvian, flies in an **aeroplane over the Alps** near the Simplon Pass, but is severely injured in alighting on the Italian side, and dies on Sept. 27.

1911. *March 7.* Antonio Fogazzaro, the Italian novelist, dies at Rome.

March 15. The trial for murder of thirty-six members of a criminal secret society, the **Camorra,** is begun at Viterbo. The hearings are at times marked by great disorder.

March 18. Premier Luzzatti resigns, owing to the rejection of his scheme of electoral reform with compulsory voting.

March 27. Celebration of 45th anniversary of Italian unity at Rome.

April 6. New ministry is formed by Radical ex-premier, G. Giolitti.

April 29. **International Exhibition** of Industries and Labor is opened at Turin.

In September. Italy demands from Turkey **concessions in Tripoli** amounting to a **protectorate,** and on September 28 delivers an ultimatum which is at once rejected. **War is declared by Italy September 29,** and the Italian fleet sails for Tripoli. On October 1, Turkey makes an appeal to the Powers. On October 2, the fleet bombards **Tripoli** and the city **is captured** October 5. Admiral Borea-Ricci d' Olmo is appointed first Italian governor of Tripoli, and decrees the abolition of slavery. A general advance on all Turkish and Arab positions begins October 12. Fierce Arab attacks cause the Italians temporarily to withdraw their advanced lines, but the ground lost is speedily retaken and maintained. October 20, Italian warships shell Bengazi and a landing force occupies the town. Reports of ruthless treatment and indiscriminate slaughter of the Arabs of the oasis give rise to severe criticism of Italian methods. There is desultory fighting during the remainder of the year.

1912. *Jan. 7.* First important naval battle in the Turko-Italian war: Italian cruiser squadron sinks seven Turkish gunboats in the Red Sea.

Jan. 31. Captain Monte is wounded while throwing bombs on an Arab encampment in Tripoli. This is the first war in which an aëroplane has been used, and the first time an aviator has been hit.

Feb. 24. Two Turkish warships are sunk at Beirut by Italian vessels.

Feb. 25. King signs the **Tripoli annexation bill.**

March 6. Bombs from Italian dirigible balloons are dropped into Turkish entrenchments.

1912. *March 13.* Bengazi is captured from the Turks after severe fighting.

March 14. **King Victor Emmanuel narrowly escapes assassination** in Rome, three shots being fired at him by an anarchist.

April 18. Italian warships bombard forts at entrance to **Dardanelles.** The closing of the straits calls forth a strong protest from the powers, and they are reopened May 1.

April 23. **Italian fleet seizes** Stampalia at entrance of Ægean Sea; occupies Rhodes May 4; Chios May 9; Karpathos and Kasos May 17; Symi May 20; Scala Nova May 30; and other **Ægean islands** in June.

April 25. The new campanile at Venice is dedicated.

May 12. Chamber of Deputies extends franchise to illiterates when more than 30 years of age.

July 8. The **Camorrist trial** at Viterbo ends, with the conviction of 26 men with imprisonment from five to thirty years.

Aug. 6. Italian troops occupy Zoara, last Tripoli coast town of importance.

Sept. 2. Napoleon's villa on the island of Elba is auctioned for $60,000.

Sept. 17. Turkish attack on Italian position at Derna is repulsed with heavy loss; — last important battle of the Tripolitan war.

Oct. 15. **Treaty of Lausanne** (Switzerland) is signed, by which Turkey renounces all sovereignty over Tripoli and Cyrenaica, and Italy agrees to return the Ægean islands seized by her. No indemnity is paid on either side.

Dec. 7. **Triple Alliance** (Germany, Austria-Hungary, Italy) is renewed.

1913. *In March.* The health of Pope Pius X. causes grave concern. His recovery toward the end of April is universally welcomed.

May 12. International Agricultural Conference opens at **Rome.**

In May. Pacification of Tripoli is interrupted by **Arab outbreaks.** On May 16, Italians lose heavily in fight with Arabs at Sidi Garba, near Derna.

Aug. 12. A general strike proclaimed throughout Italy is said to be a failure except in Genoa and Pisa.

Sept. 14. Professor Malladra descends to a depth of 1200 feet in the crater of Mount Vesuvius, and registers a temperature of 626° F.

In October. First general election under **new franchise law** is held, the number of voters being now increased from 3,247,722 to 8,635,148. The franchise is extended to all males over 21 years of age, with the exception of illiterates under 30 who have not served in the army.

Dec. 12. Leonardo da Vinci's world-famous painting *Mona Lisa,* stolen from the Louvre August 22, 1911, is recovered in Florence.

Dec. 16. Triple Alliance is renewed without modification.

1914. *March 10.* Giolitti cabinet resigns, following the withdrawal of Radical support. New cabinet is formed by Signor Salandra March 17.

May 5. Italo-American general arbitration treaty is signed at Washington.

May 8. Earthquake destroys several villages along the eastern coast of Sicily, and kills 180 persons.

June 8. **General strike** is proclaimed throughout Italy as a protest against the killing of two anarchists during the recent rioting at Ancona. Government calls strikers to the colors and reëstablishes railway and telegraphic communication. Strike is called off June 10.

Aug. 5. Italy declares she is not bound by terms of the Triple Alliance as Germany and Austria-Hungary are engaged in an "aggressive war."

Aug. 20. **Pope Pius X. dies** at the age of 79.

In August. See GERMANY. The Great War.

Sept. 3. Cardinal Giacomo della Chiesa, Archbishop of Bologna, is elected Pope, and takes the name of **Benedict XV.**

Sept. 6. Pope Benedict XV. is formally crowned in the Sistine Chapel.

Oct. 1. Government protests against Austrian mine laying in the Adriatic.

Oct. 26. Italian naval force occupies Avlona, Albania.

Dec. 29. Sir Henry Howard presents his credentials as British ambassador at the Vatican. No similar appointment has been made for over 400 years.

1915. *Jan. 13.* **Earthquake devastates southern and central Italy.** From Naples northward to Ferrara, a distance of about 300 miles, and across the peninsula from the Tyrrhenian Sea to the Adriatic, nearly 100 towns and villages are in ruins, and the loss of life is estimated at from 30,000 to 40,000. In Avezzano and Sora, almost the entire population perishes. Cold and snow add to the sufferings of the homeless survivors. In Rome, many churches, statues, and public buildings are destroyed.

JAPAN.

1910. *Jan. 31.* Japan places all her bonds on a **four per cent basis.**

July 1. Port Arthur is opened to all nations.

July 22. Treaty is signed with Korea formally **annexing Korea** to Japan as the province Chosen.

In July. Japan gives notice that all **commercial treaties** will be terminated a year hence.

In August. **Floods** near Tokyo cause loss of $30,000,000 of property. 200,000 persons receive government relief.

1911. *Jan. 18.* Twenty-four conspirators against the lives of the Crown Prince and officers of the Imperial household are condemned to death, but the sentences in the case of half are commuted to life imprisonment.

July 13. A **new Anglo-Japanese alliance** treaty, to last ten years, is signed in London.

Aug. 25. Prince Katsura resigns the premiership, and a new ministry is formed by Marquis Saionji.

1912. *Jan. 16.* Destructive fire sweeps Osaka, destroying 5,268 buildings and rendering 30,000 persons homeless; damage $15,000,000.

July 30. The **Emperor Mutsuhito dies,** and the Crown Prince Yoshihito ascends the throne.

Sept. 13. Simultaneously with the funeral ceremonies of the Emperor, **General Count Nogi and his wife,** in accordance with an ancient custom, **commit suicide** as a final tribute to the dead Emperor.

Sept. 22. The worst **typhoon** for half a century sweeps Japan, hundreds of lives being lost and $20,000,000 damage being inflicted.

Dec. 4. The premier, Marquis Saionji, and cabinet resign. December 17, Prince Katsura is directed by the Emperor to form a cabinet.

1913. *Feb. 5.* Vote of censure on the government under Prince Katsura is carried amid great tumult. The Emperor suspends the session of the Diet.

Feb. 10. **Political rioting** continues in the streets of Tokyo. The premier, Prince Katsura, is stoned by the mob; bureaucratic newspaper offices and the dwellings of the ministers are attacked.

Feb. 12. Count Yamamoto is appointed premier, and forms coalition ministry February 15.

March 6. Fire in Yokohama destroys $7,000,000 worth of property.

In April. The proposed **California anti-alien land legislation** is bitterly resented in Japan, and war threats are indulged in by extremists. The bill is amended on May 2, but being still construed as prejudicial to Japanese interests formal protest is made to the United States May 9. The bill is signed May 19, the United States replying to Japan that the measure in no wise infringes treaty rights. Renewed protests are made on June 4, August 26, and September 30. See UNITED STATES, May 19, 1913.

1913. *June 28.* Arbitration treaty with United States is renewed.

Sept. 26. Japan sends ultimatum to China, demanding satisfaction within three days for the Nanking outrages (when several Japanese were killed and the Japanese flag was insulted). September 28, formal apology and reparation are made.

Dec. 28. Famine prevails in the northwest of Japan, owing to failure of crops and fisheries. The distress is appalling; families subsisting on roots and leaves, girls being sold into practical slavery, crimes being committed to secure refuge in jail.

1914. *Jan. 11–13.* Sudden eruption of Sakurashima, after being quiescent for about 130 years, creates **a volcanic disaster** paralleled only by the destruction of Pompeii, Krakatoa, and St. Pierre. Villages are blotted out, and thousands perish. **Kagoshima** on the mainland is **covered with ashes** to a depth of 15 ft. Other mountains in Kiushu island are showing activity, and great consternation prevails.

Feb. 10. **Naval scandal,** growing out of the alleged receipt of illicit commissions by naval officers for influencing admiralty contracts in favor of a German firm, leads to serious **rioting in Tokyo.** The attitude of the government is condemned by the opposition, but a vote of no confidence is rejected by the Diet after a turbulent debate.

April 9. Haruko, Dowager Empress of Japan, dies at the age of 64.

May 23. Japan ratifies the arbitration treaty with the United States.

Aug. 15. Japan sends an **ultimatum to Germany to deliver up Kiaochow** to her, and Japan will hold it in trust for China until the end of the war. Receiving no reply, Japan declares war on Germany August 23 (24, Tokyo time). See GERMANY. The Great War.

Oct. 7. Japanese force occupies Marshall Islands in the Pacific.

1915. For the Great War, see GERMANY.

LIBERIA.

1912. *Jan. 1.* **Daniel E. Howard** is inaugurated president at Monrovia, succeeding President Barclay, who has held office for eight years.

In June. The government arranges to pay its German creditors with its new five per cent bonds.

1913. *In March.* Concession to exploit 12,000 square miles of the most valuable land in the republic is granted to an English company.

MEXICO.

1910. *In September.* **Centenary** of the republic is celebrated.

Nov. 10. Several anti-American demonstrations occur in Mexico on account of the lynching of a Mexican in Texas.

Nov. 22. A **provisional government** is proclaimed by Francisco J. Madero, Jr., because of hostility to Diaz who had been reëlected president in April.

Dec. 1. Porfirio **Diaz** is inaugurated **president for an eighth consecutive term.** Rebellious outbreaks occur in many districts.

1911. *Jan. 1.* Francisco J. Madero assumes command of the revolutionary troops in the field. The revolt spreads over a wide territory to the north of the capital. Among scores of skirmishes the following engagements are noteworthy; Corome January 17; Ciudad Juárez February 3; Guadalupe February 20; Agua Prieta March 12 and April 13; Sonora March 23; and the capture of Ciudad Juárez by Madero May 10. In some of the frontier engagements, especially Ciudad Juárez and Agua Prieta, several Americans on the United States side are killed or wounded by stray bullets, calling forth protests from President Taft.

March 24. Cabinet resigns. President Diaz opens new Congress April 1.

April 22–23. An armistice is agreed to between the federal and revolutionary commanders in chief.

May 8. Diaz **promises to resign** after peace has been restored.

May 11. Francisco J. Madero, head of the insurgents' provisional government, establishes a capital at Ciudad Juárez, and appoints a provisional cabinet. Peace is proclaimed May 18.

May 25. **President Diaz resigns,** and on May 31 sails for Europe. Minister De la Barra is inaugurated provisional president, with the support of Madero.

June 7. Earthquake in Mexico City causes much damage; 63 lives lost.

Oct. 1. **Madero is elected president,** and, on November 6, is inaugurated. Uprising against him led by Gen. Reyes in December proves abortive.

1912. *Jan. 31.* Ciudad Juárez is seized by opponents of the Madero government, who proclaim Emilio Vasquez Gómez president February 1. The government regains control of the city February 4.

Feb. 3. Madero is warned that Mexico must protect United States citizens from injury by rebels. On February 5, four United States battalions are dispatched to the Mexican border as a precautionary measure.

Feb. 23. **General Orozco,** military Governor of Chihuahua, goes over to the insurgents as chief military commander.

In February. Rebellion against the Madero government spreads, and many encounters take place, especially in Chihuahua. On March 14, the rebels capture the town of Jiménez.

March 25–28. The federal forces are defeated in a series of engagements with Orozco's **revolutionary army** near Jiménez. In April, the insurgents suffer many reverses in the state of Chihuahua.

May 4. Emilio Vasquez Gómez is proclaimed provisional president of the insurrectionary government at Ciudad Juárez, but is repudiated by the rebel leader Orozco. May 11, Gómez abdicates and flees to the United States.

In May. Revolutionary bands under Orozco continue their operations in the northern provinces of Chihuahua and Durango. They capture Guadalupe May 21, and score other minor successes. They are defeated by federal troops at Rellano May 23, and evacuate Jiménez May 27.

June 25. Orozco, in a message to President Madero, offers to surrender unconditionally provided an amnesty be granted to him and his followers.

July 3. The rebels are defeated at Chihuahua with a loss of 4,600 men.

Aug. 20. The federal troops regain control of Ciudad Juárez.

In August. The **Zapatistas** (followers of Emiliano Zapata) continue their revolutionary activities in the south, raiding villages and wrecking trains. August 14, they capture Ixtapa. September 1, they are defeated near Tenancingo. November 5, they take Cuernavaca, but are routed near here by federal troops November 9.

Oct. 16. **General Felix Diaz,** nephew of the deposed president, heads a new rebellion against the Madero government and seizes Vera Cruz. He is defeated and surrenders on October 23; condemned to death October 27.

1913. *Jan. 20.* An eruption of the volcano of Mount Colima causes thousands to abandon their homes.

Feb. 9. The army rises in revolt in Mexico City, releases Gen. Felix Diaz, the leader of the Vera Cruz revolt, and headed by him seizes the arsenal. Fighting continues for ten days with much damage to property and injury to noncombatants.

Feb. 18. **President Madero is deposed** and cast into prison. Gen. Victoriano Huerta, commander of the federal forces, is proclaimed provisional president.

Feb. 22. **Madero and J. P. Suarez, the deposed vice president, are shot** at midnight on the way to the penitentiary. The rebel generals Orozco and Emilio Vasquez Gómez submit to new government, but the northern states and the Zapatistas in the south maintain an armed opposition.

March 12. "Constitutionalists" opposed to the Huerta régime are in possession of the towns of Durango and Agua Prieta.

March 13. Constitutionalists occupy Nogales on the Arizona border.

March 30. Huerta complains to the United States of the shipment of war materials to the rebels, and requests a closer watch upon the frontier.

May 9. Following the refusal of the United States to recognize the new government bitter feeling is aroused in Mexico, and Provisional President Huerta declares Ambassador Wilson has no diplomatic standing.

May 20. Congress sanctions a $100,000,000 six per cent foreign loan.

May 22. Constitutionalist insurrectos under Generals Carranza and Villa defeat Federal troops near Sacramento, Coahuila state, gaining possession of all towns between Saltillo and Monclova.

July 16. Ambassador Wilson leaves Mexico City by direction of President Wilson; his resignation is accepted August 4.

Aug. 1. Provisional President Huerta announces that he will neither resign nor permit foreign interference.

Aug. 4. **John Lind,** ex-Governor of Minnesota, is sent to Mexico as the personal representative of President Wilson to attempt an informal settlement of the revolution, arriving in Mexico City August 11.

Aug. 20. Huerta rejects the proposals of the United States to the effect that he make way for a more acceptable presidential candidate.

Aug. 26. John Lind, finding his mission of mediation unsuccessful, leaves Mexico City for the United States, via Vera Cruz.

Aug. 27. President Wilson calls upon all United States citizens to leave Mexico.

In September. Insurrection in the northern states gains headway. On September 16, Gen. Carranza moves his headquarters to Hermosillo, capital of Sonora state. Much damage is done to railroad property.

Oct. 10. **Huerta imprisons 110 deputies** for conspiracy and suspends Congress. The day after this *coup d'état,* Huerta **declares himself dictator** until the election of October 26.

Oct. 13. United States government informs Mexico that it will view with great displeasure any harm that might happen to the imprisoned deputies.

Oct. 14. Huerta is notified by President Wilson that, in view of conditions in Mexico, the United States will not recognize as constitutional the election set for October 26.

Oct. 26. General election is held for president, vice president, and members of Congress, but, insufficient votes being cast to constitute a valid choice for president or vice president, Huerta continues in office as provisional president.

Oct. 28. General Felix Diaz takes refuge in the United States gunboat *Wheeling* in Vera Cruz harbor.

Nov. 15. Chamber of Deputies assembles and effects temporary organization, pledging its support to Huerta on November 22. Senate meets without a quorum.

In November. Insurrectos under **General Villa** repeatedly defeat the government forces; they capture Ciudad Juárez November 15; Victoria, capital of state of Tamaulipas, is captured November 18. Federal forces retreat to the city of Chihuahua November 24. The revolutionists capture Mazatlán, one of the chief ports on the western coast, November 27.

Dec. 1. Federal garrison evacuates city of Chihuahua because of shortage of food supply, thus presenting the Constitutionalists with one of the main keys to the advance on Mexico City.

Dec. 9. The Congress declares the October election null and void, and authorizes Huerta to remain in office till new elections are held in July, 1914.

Dec. 22. Provisional President Huerta decrees that every day until the end of the year (Dec. 22–31) shall be a legal holiday. This drastic measure, equivalent to a moratorium, is taken to prevent a run on the banks.

1914. *Jan. 1.* Huerta decrees that the bank holiday declared by him shall be extended for 15 days.

Jan. 10. Constitutionalists led by Gen. Villa inflict a crushing defeat on the northern division of the federal army at Ojinaga, opposite Presidio, Texas; large supplies of arms and ammunition are captured; federal refugees flee across the border, and are held in United States detention camps at Marfa (capital of Presidio county) and El Paso.

Jan. 13. Government suspends payment of interest on the national debt for six months.

April 7. **American sailors are arrested** at Tampico for landing within the federal lines; Rear Admiral Mayo demands apology and a salute to the flag. April 13, Huerta government orders the military commander at Tampico not to accede to Mayo's demand. April 14, President Wilson orders the Atlantic fleet to proceed to Tampico. April 16, Huerta agrees to salute the American flag under certain conditions. April 18, Huerta is given 24 hours in which to comply.

April 21. **American marines and bluejackets are landed at Vera Cruz** by Rear Admiral Fletcher, and seize the customhouse and cable office. Desultory street fighting follows, with loss to the landing force. Further troops are landed on the following day, and possession of the entire city is taken. Sniping continues, and during the first three days the American casualties are 17 killed and 70 wounded. The Mexican loss is 126 killed and 195 wounded.

April 27. Huerta government accepts the mediation proposal of Argentina, Brazil, and Chile, to adjust the dispute with the United States.

April 28. Carranza and Villa agree not to oppose the American occupation of Mexican territory so long as revolutionist territory is not invaded.

April 29. Carranza accepts in principle the mediation proposals of Argentina, Brazil, and Chile, but declines to take part in the conference.

May 13. Tampico is captured by the revolutionists.

May 20. Peace conference opens at Niagara Falls. See UNITED STATES.

May 31. Carranza assumes the title of provisional president, and begins the establishment of a government at Saltillo.

June 8. United States refuses to sanction the blockade of Tampico by federal gunboats, and the government order is countermanded.

1914. *June 16.* General Villa rebels against the orders of General Carranza, the "first chief," and seizes administration offices in several cities.

July 5. General Huerta is reëlected president by forced partisan vote.

July 9. Guadalajara, the second largest city in Mexico, is captured by the revolutionists.

July 15. **Huerta,** after 17 months as provisional president in face of opposition at home and abroad, **resigns** and leaves Mexico City for Puerto Mexico, whence he embarks for Jamaica on German warship July 20. He is **succeeded by Dr. Francisco Carbajal,** minister of foreign affairs.

Aug. 10. Provisional President Carbajal decides to resign, having failed to arrange an amicable surrender of the government to the Constitutionalists.

Aug. 13. Carbajal leaves Mexico City and seeks refuge in Vera Cruz. The federal army and government officials likewise quit the capital, and two days later the Constitutionalist army enters unopposed, Gen. Carranza assuming powers of provisional president.

Sept. 15. President Wilson orders the **withdrawal of United States troops from Vera Cruz.** Gen. Funston urges delay. See Nov. 23.

Sept. 23. General Villa repudiates Carranza, but promises to support a provisional president chosen by a new convention.

Oct. 22. Constitutionalist conference held at Aguascalientes declares itself to be the supreme authority in Mexico. On November 2, it appoints Gen. **Eulalio Gutierrez provisional president.** Villa approves the appointment; Carranza does not. Gutierrez assumes the presidency November 10.

Nov. 11. General Villa is appointed commander in chief of the forces of the provisional government, and is ordered to proceed against Carranza.

Nov. 20. Carranza's forces leave Mexico City as Villa approaches.

Nov. 23. United States force, under Brig. General Funston, is withdrawn from Vera Cruz, but warships *Minnesota* and *Texas* remain in harbor.

Nov. 24. Zapata enters Mexico City with his troops.

Nov. 26. Carranza occupies Vera Cruz and proclaims it the capital.

Dec. 3. Villa enters Mexico City with Provisional President Gutierrez, having come to an understanding with Zapata, and installs the government appointed by the Aguascalientes convention.

In Dec. Revolution is again rife, the followers of Carranza holding out against the Conventionalists and Villaistas. Fighting near the border continues, and endangers the lives of American citizens.

1915. *In January.* Gutierrez flees (Jan. 16), and Gen. **Roque Gonzales Garza** is named provisional president by the military convention in session at Mexico City, pending the election of a new president. The convention retains control of government, and confirms Villa as commander in chief. Carranzistas, Zapatistas, and other factions, continue the reign of **anarchy and rapine.** Ranches are stripped of cattle, farms are left uncultivated, graft and pillage are rampant, while starvation stares many in the face. The end of the Mexican imbroglio is not yet in sight.

MONACO.

1911. *Jan. 5.* Constitution with universal suffrage is granted by Prince Albert.
April 23. The first constitutional election is held.

MONTENEGRO.

1910. *Aug. 28.* **Montenegro** is proclaimed **a kingdom,** with Prince Nicholas I. as king, at Cetinje.

1912–1913. For Balkan War, see TURKEY.

1913. *April 6.* Montenegro's refusal to withdraw from Scutari causes a **naval blockade** by the powers (Great Britain, France, Germany, Italy, and Austria). Unintimidated, the Montenegrins continue the siege.

April 21. The commander of the international fleet blockading the Montenegrin coast threatens to land troops unless the siege of Scutari is immediately abandoned.

April 23. **Scutari surrenders** to the Montenegrins.

May 5. King Nicholas, in defiance of his cabinet, agrees to evacuate Scutari in compliance with demands of the powers, and in return for financial assistance; the city is handed over to an international naval force on May 14.

June–Aug. For Second Balkan War, see BULGARIA.

In August. Subsequent to the signing of the treaty of Bucharest, Montenegro receives from Servia, in return for assistance in the two Balkan wars, about half of Novibazar sanjak, including Byelopole, Ipek, and Jakova.

1914. *Aug. 7.* **Montenegro declares war on Austria** in support of Servia. See GERMANY. The Great War.

1915. For the Great War, see GERMANY.

MOROCCO.

1911. See FRANCE.

1912. See FRANCE.

March 30. Sultan signs treaty at Fez establishing **French protectorate.**

Aug. 12. Sultan Mulai Hafid abdicates, and is granted a pension of $70,000 by France. He is succeeded by his brother Mulai Yusef.

Nov. 27. **Franco-Spanish treaty** decides the Moroccan question in favor of France. Important districts in north and south are to be abandoned by Spain. Tangier is declared international by treaty between Great Britain, France, and Spain.

1913. See FRANCE.

In June. Spanish military posts near Tetuan are attacked by tribesmen.

1914. *Jan. 2.* It is reported at Tangier that **Raisuli,** the former brigand, has been proclaimed Sultan by his partisans in the interior who are determined to continue the war against the European invaders.

See FRANCE.

THE NETHERLANDS.

1913. *July 1.* International opium conference opens at The Hague.

Aug. 20. **Universal Peace Congress** begins its twentieth annual session at The Hague, and adopts a resolution recommending that the Panama Canal tolls controversy between Great Britain and the United States be referred to the Hague Court of Arbitration.

Aug. 28. **Palace of Peace** at The Hague, the gift of Andrew Carnegie, is dedicated by Queen Wilhelmina.

1914. *In August.* On the outbreak of the Great War, martial law is proclaimed, troops are massed on the frontier, and other measures are taken to enforce neutrality. Thousands of refugees cross from Belgium. See GERMANY.

NICARAGUA.

1910. *Aug. 19.* The **revolution** under the leadership of Gen. Juan J. Estrada, which has lasted almost two years, **is ended** by the resignation of President José Madriz, following revolutionist victories near Managua, the capital. Estrada assumes the provisional presidency August 29; on December 31, the congress elects him provisional president for two years.

1911. *Jan. 1.* The United States government resumes diplomatic relations after the election of President Estrada.

Feb. 13. Martial law is declared and many high officials are arrested, following an explosion in the barracks at Managua.

May 11. President Estrada resigns, and Adolfo Díaz, the vice-president, is inaugurated provisional president.

Oct. 7. General Luis Mena is elected president for the four-year term beginning Jan. 1, 1913. This election is later declared illegal.

1912. *July 31.* **General Mena,** deposed as minister of war, heads **revolt.**

Aug. 4. **United States lands force** to protect American lives and property. Martial law proclaimed August 6. Additional United States troops are ordered to the scene of the disturbance.

Aug. 14. United States troops repel attack on Managua.

Aug. 20. The rebels massacre 450 government troops taken as prisoners.

Aug. 29. Four hundred United States marines land at Corinto to guard the railroad to Managua, the capital.

Sept. 7. United States blockades coast to prevent filibustering.

Sept. 26. Federals take Granada from the rebels; General Luis Mena surrenders to United States protective force.

Oct. 5. The rebel fortresses of Massaya, on Barranca and Coyotepe hills, are captured by United States marines and bluejackets, and the city is cleared of the rebels. Oct. 6, Leon, last rebel stronghold, surrenders.

Nov. 2. **Adolfo Díaz is elected President** for the term beginning January 1, 1913. End of strife is reported.

1913. *March 24.* Currency system is placed upon a gold basis.

April 19. President Wilson orders release of General Luis Mena, the revolutionary leader, from confinement within the Panama Canal Zone.

1914. *Aug. 5.* Treaty is signed with the United States by which for a payment of $3,000,000 the United States has the perpetual right to construct an interoceanic canal and a naval base.

NORWAY.

1910. *In June.* **Woman suffrage** is granted in all communal elections.

1912. *Jan. 18.* Storthing passes law admitting women to public office.

Feb. 19. General Bratlie succeeds M. Konow as premier.

March 7. Amundsen, the Norwegian explorer, cables from Hobart, Tasmania, that he **reached the South Pole** on December 14, 1911.

1913. *Jan. 24.* Premier J. K. M. Bratlie resigns. Gunnar Knudsen forms new ministry.

June 11. **Woman suffrage is extended,** allowing all women to vote in parliamentary elections without regard to the amount of their income tax. Women are also allowed to serve on juries.

June 26. Royal veto is abolished by the Storthing.

1914. *May 15.* One-hundredth anniversary of the separation of Norway from Denmark is celebrated.

July 30. Lieut. Giran flies in a monoplane from Norway to Scotland (315 miles across the North Sea) in 4 hours, 10 mins.

Dec. 18. King Haakon, with King Christian of Denmark and King Gustavus of Sweden, meet at Malmö to discuss the effect of the Great War on their countries. See GERMANY.

PANAMA.

1910. *In March.* Carlos Antonio Mendoza, the second designate, succeeds the late president, José Domingo de Obaldía, the first designate having died.

Oct. 5. Pablo Arosemena, having been elected first designate by the National Assembly, is inaugurated to complete the presidential term.

1911. *Oct. 13.* Parcel post agreement is entered into with the United States.

1912. *July 14.* Dr. Belisario Porras is unanimously elected president for four years, and is inaugurated October 1.

1913. *In October.* Law compelling **Chinese laborers** to register and pay a large tax is modified in favor of the Chinese.

1914. *Dec. 8.* National assembly ratifies treaty granting United States control of harbors of Colón and Ancón.

PARAGUAY.

1910. *Nov. 25.* Manuel Gondra is inaugurated president.

1911. *Jan. 19.* Albino Jara, minister of war, succeeds to the presidency.

March 10. Martial law is declared on account of the rebellion against President Jara.

July 5. **Centennial of the Paraguay declaration of independence. President Jara is expelled;** Liberato Rojas is made provisional president.

1912. *Jan. 24.* Argentine government demands compensation for attacks on shipping and property; diplomatic relations are severed January 25; dispute settled February 18.

In January. Liberato Rojas, deposed in December, is restored to the presidency by force of arms.

March 1. Pedro Peña is appointed provisional president in the place of Liberato Rojas, captured by revolutionists.

March 22. **Counter-revolutionists seize Asuncion** and President Peña and his ministry seek refuge on foreign warships. Dr. E. Gonzalez Navero is made provisional president March 23.

April 27. Civil war breaks out again; four warships are damaged during an attack upon the revolutionists under ex-President Jara.

May 17. Jara is captured with many of his officers, and dies of his wounds. **Anarchy** prevails throughout June.

In July. **Eduardo Schaerer** is elected president; inaugurated August 15.

1913. *April 21.* President arranges for ten German officers to train army.

In 1913. Free from political disturbances, great industrial progress is recorded; large tracts are opened to agriculture.

PERSIA.

1910. *Oct. 20.* Unrest in Persia, causing interference with trade routes, results in a British note of protest to the authorities at Teheran.

1911. *Feb. 4.* The minister of finance, Sani-ed-Dowleh, is assassinated.

June 13. **W. Morgan Shuster,** an American, is made **treasurer-general** with full powers of direction and control.

July 29. Government places a reward of $100,000 upon head of ex-Shah.

July 30. The **ex-Shah marches on Teheran** with a considerable force, but is completely defeated and forced to withdraw.

Nov. 16. Russia, in an ultimatum, demands the summary dismissal of Mr. Shuster, and on this being refused breaks off diplomatic relations and enters Persia with a large force. Parliament still refuses, but the cabinet finally yields, and **Mr. Shuster is dismissed** December 28.

Dec. 29. **Tabriz surrenders to Russian troops** after a nine days' siege.

1912. *Jan. 10.* W. M. Shuster with his family leaves Teheran. The remaining American members of his staff leave on February 10.

Feb. 7. Government offers amnesty and an annuity of $100,000 to the ex-Shah on condition that he leaves Persia.

Aug. 7. Attempt to dislodge the ex-Shah from mountain position fails.

1913. *In January.* Great Britain is informed that the tribesmen who shot the British Captain Eckford in December will be punished.

In February. The British and Russian governments jointly agree to advance $2,000,000 to Persia for the reorganization of the gendarmery. It is announced that British syndicates are to receive **concessions for** constructing the Mohammera-Khoramabad **railway** and for developing southern mines, while a Russian syndicate receives a concession for a railway between Julfa and Tabriz.

1914. *July 21.* Ahmed Mirza is crowned Shah on his 16th birthday.

1915. *Jan. 14.* **Tabriz** is reported to have been **occupied by the Turks,** as a base of operations against the southern frontier of Russia. See GERMANY. The Great War.

PERU.

1910. *Jan. 11.* Peru ratifies the treaty fixing the **boundary with Brazil** from the Yavarí river to Acré. Brazil ratifies it April 26.

In April. Peru demands that the **dispute** with Chile **over Tacna** (a Peruvian territory administered by Chile since 1883) be submitted to arbitration. Diplomatic relations had been severed by the dispute.

1911. *Jan. 18.* Peruvian territory is invaded by Colombian troops.

In February. Peruvian troops cross into Ecuador and release two Peruvian prisoners; war is threatened but averted. The boundary dispute with Ecuador is to be arbitrated by Argentina, Brazil, and the United States.

1912. *April 26.* A treaty of friendship, commerce, and navigation is signed with Cuba.

In April. Government troops are sent to quell the disorder incidental to the **strike of sugar workers** in the Chicama, Cartairo, and Baredo valleys.

July 13. Reports of **rubber atrocities** are published by British Foreign Office.

Aug. 18. Guillermo Billinghurst is elected president.

1913. *Aug. 10.* Ex-President Leguia is exiled from Peru.

Oct. 4. Congress votes an amendment to the Constitution granting **religious toleration.**

Nov. 7. Earthquake at Abancay wrecks the city and kills more than 200.

1914. *In February.* **Military revolution** breaks out, led by Colonel Benavides; the palace is attacked, prime minister Gen. Enrique Varela is killed, and President Billinghurst is taken prisoner, deposed, and exiled. Benavides establishes a provisional government pending a general election. United States formally recognizes the new government February 12.

May 15. **Oscar Benavides** is elected **provisional president,** and is sworn into office May 18.

May 18. One hundred and twenty-one senators and deputies declare themselves a national congress and proclaim Roberto Leguia provisional president.

May 19. Supreme Court officially recognizes the election of Benavides as provisional president.

PORTUGAL.

1910. *Oct. 4.* A revolution breaks out at Lisbon with an attack upon the city from the warships in the harbor. After a night of fighting the revolutionists are in full control. The King, his mother, and grandmother escape on the royal yacht to Gibraltar and later go to England. **Republic is proclaimed** October 5, with Dr. Teofilo Braga as president.

Oct. 8. The provisional government at Lisbon decrees the immediate expulsion of monks and nuns, and, on October 28, the total separation of church and state.

Oct. 30. Ex-premier Franco is arrested for alleged abuse of power.

1911. *Jan. 29.* A monthly pension of $3,300 is granted to King Manuel.

May 28. Assembly elections result in an overwhelming victory for the Republican government.

June 19. The **first constituent assembly is opened.**

The **Republic is officially recognized** by the United States; by France on August 24; by Great Britain, Spain, Germany, Italy, and Austria-Hungary on September 11.

Aug. 24. Dr. Manoel **Arriaga is elected first constitutional president.**

Sept. 2. A cabinet is formed by Premier Joãs Chagas. In September and October sporadic royalist demonstrations, chiefly in the northern mountainous country, are suppressed.

Nov. 8. Premier Chagas and his cabinet resign, and Senhor Vasconcellos heads the new ministry.

1912. *Jan. 29.* **Martial law is declared** in Lisbon on account of strike riots; transit facilities are suspended, and theaters are closed.

In January. The hostility to the clergy is unabated. **More bishops are expelled** for refusing to accept the law for the separation of church and state. By April 1 only two bishops remain.

In June. A ministerial crisis is overcome by the formation of a coalition ministry with Dr. Duarte Leite as premier.

In July. A **monarchist force** of 800 men concentrates on the northern frontier, but the peasants fail to support the movement and the royalists are routed by the Republican troops.

1913. *Jan. 3.* The cabinet under Premier Leite resigns. New ministry is formed by Dr. Alfonso Costa, leader of the Democrats, January 8.

In January. The severe **treatment of political prisoners** calls forth the censure of the foreign and domestic press. On January 28, a bill for the reform of the prison system is presented.

1913. *April 27.* Anarchists attack barracks in Lisbon with bombs and revolvers, but are dispersed; many arrests follow. Similar **outbreaks of anarchists** or syndicalists occur on June 10 and on July 20 and 21.

June 19. Parliament votes to abolish Portuguese legation at the Vatican.

Sept. 4. **Former King Manuel is married** to Princess Augustine Victoria, daughter of Prince William of Hohenzollern, at Sigmaringen, Germany.

Oct. 20. **Monarchist outbreaks** occur in Lisbon, the rioters attempting to release royalist prisoners, to destroy railroad bridges, and cut off communication with Oporto. Expected support from the north not arriving, the movement fails and many arrests follow.

1914. *In August.* See GERMANY. The Great War.

Nov. 22. Parliament authorizes the government to aid England "at the proper time" in the war with Germany.

ROUMANIA.

1913. For Second Balkan War, see BULGARIA.

Aug. 21. King Charles and Queen Elizabeth ("Carmen Sylva") are fired at by brigands while motoring near the royal country seat at Sinaia, in the Carpathian Mountains, but escape injury.

1914. *Oct. 10.* King Charles dies at Bucharest at the age of 75, and is succeeded by his nephew as **King Ferdinand.**

Dec. 22. Roumania agrees to restore to Bulgaria most of the territory acquired after the Second Balkan War.

RUSSIA.

1910. *March 9.* The trials of Nikolas Tschaikowsky (Chaykovski) and Mme. Breshkovskaya for conspiring against the government result in acquittal of Tschaikowsky and conviction of Mme. Breshkovskaya.

June 22. Construction of a new **Southern Siberian railroad,** to cost $85,000,000, is announced.

July 25. About 8,000 Jews are said to have been expelled from Kiev.

July 28. The spread of **cholera** causes great alarm. More than 90,000 deaths are reported during the summer months.

Nov. 20. Count **Tolstoy dies** at Astapova, aged 82.

1911. *Sept. 14.* Premier Stolypin is shot in a theater at Kiev. He dies on September 18.

Sept. 23. M. **Kokovtzov,** minister of finance, **becomes premier.**

Dec. 22. The Duma introduces a bill providing for a tariff war against the United States. See PERSIA.

1912. *In April.* Russia agrees to recognize Italian sovereignty in Tripoli in return for support of Czar's Balkan policies.

In September. The Duma, which has been sitting since 1907, is dissolved, and new elections are ordered. **New Duma is inaugurated** November 28.

Dec. 31. The treaty of 1832 with the United States lapses at midnight. See UNITED STATES, Dec. 18, 1911.

1913. *Jan. 1.* The Council of the Empire confirms the law passed by the Duma abolishing serfdom in the Caucasus.

In March. **Romanov tercentenary** is celebrated. Amnesties are granted to various political offenders, including the exiled writer Maksim Gorki.

April 23. Panslavists hold great demonstration in St. Petersburg to celebrate capture of Scutari by Montenegrins.

June 8. The Czar sends an identical telegram to the Kings of Bulgaria and Servia deprecating a fratricidal war, and reminding them that in the terms of their treaty he is the arbiter to whom they are to appeal. Russian arbitration is accepted June 12. See BULGARIA.

In October. **Russification of Finland** proceeds steadily, but a storm of protest is aroused by the arrest of judges for refusing to apply the Russian Law concerning the rights of Russians resident in Finland.

Outbreaks of **anti-Semitism** occur during the trial at Kiev of Mendel Beiliss, a Jew, accused of the ritual murder of a Christian boy. The trial lasts from October 9 to November 10, and, after remarkable proceedings, ends in an acquittal.

1914. *March 25.* The projected marriage between the Czar's eldest daughter, the Grand Duchess Olga, and Prince Charles of Roumania is announced.

In June and July. Repressive policy of the government toward the working class, manifesting itself in dissolution of labor unions, suppression of labor papers, and the like, results in a number of **general strikes,** notably in St. Petersburg (Petrograd).

July 29. Diplomatic intercourse with Austria-Hungary is suspended.

Aug. 1. **Germany declares war on Russia.** See GERMANY.

Aug. 15. Russia proclaims reconstruction and autonomy of Poland.

Sept. 1. City of St. Petersburg is renamed **Petrograd** by imperial edict.

Sept. 5. Russia, France, and England agree not to make peace separately.

Oct. 21. Czar prohibits State sale of alcohol.

1915. For the Great War, see GERMANY.

SALVADOR.

1913. *Feb. 4.* President Manuel E. Araujo is shot by assassins, and dies February 9. He is succeeded by Carlos Melendez.

1914. *Aug. 29.* Dr. Alfonso Quiñonez succeeds to presidency on resignation of Melendez.

SERVIA.

1912-1913. For Balkan War, see TURKEY.

1913. For Second Balkan War, see BULGARIA.

1914. *Feb. 17.* Diplomatic relations with Bulgaria are resumed.

March 14. Treaty of peace is signed with Turkey at Constantinople.

June 24. King Peter appoints his son, Crown Prince Alexander, to serve as regent during the king's illness.

July 28. **Austria declares war on Servia.** See GERMANY.

1915. For the Great War, see GERMANY.

SIAM.

1910. *Oct. 23.* King **Chulalongkorn I. dies** at Bangkok, and is succeeded by his eldest son Chowfa Maha Vajiravudh.

1912. *March 14.* A revolutionary movement against King Vajiravudh is checkmated and punished, but without undue severity. Conscription for both the army and the police is enforced throughout the kingdom.

SPAIN.

1910. *Jan. 14.* Plot to overthrow ministry is discovered; many arrests.

Feb. 9. The Moret cabinet resigns and is succeeded by a **radical and anticlerical cabinet** with José Canalejas as premier.

May 8. Government of Canalejas is victorious in the elections.

July 29. The rupture between the Vatican and the government caused by the government's policy towards the Roman Catholic orders in Spain leads to the withdrawal of the Spanish ambassador to the Vatican.

1911. *April 2.* Resignation of Premier Canalejas and the Cabinet follows a debate on the **Ferrer controversy,** but on receiving permission to reorganize his cabinet he withdraws his resignation.

Sept. 19. **Martial law is declared** throughout the kingdom on account of revolutionary riots.

1912. *Jan. 14.* Cabinet resigns following the King's refusal to execute a murderer condemned to death by the supreme council of war. The King urges Premier Canalejas to remain.

March 11. Canalejas cabinet resigns, and is reconstructed March 12.

Nov. 12. The **premier, José Canalejas, is assassinated** by an anarchist.

Nov. 14. Count Romanones is appointed Premier. Conservative opposition forces him to resign on December 31, but the support of King Alfonso enables him to form new ministry.

Nov. 26. Franco-Spanish treaty is signed, settling the Moroccan question.

1913. *Jan. 8.* Premier Romanones announces the government's decision to resume formal relations with the Vatican interrupted in 1910.

April 13. **King Alfonso** narrowly **escapes assassination** while riding through the streets of Madrid, an anarchist firing three shots at him.

June 11. Count Romanones, the premier, resigns a second time, because of disagreement among the Liberal members of Senate. On June 14, he forms new Liberal cabinet.

Aug. 7. **General strike at Barcelona** throws 75,000 men out of work and closes 260 factories. On August 22, the strikers accept the government's terms and agree to return to work.

Sept. 25. Raisuli and his followers are defeated at Glot, Morocco.

Oct. 17. In the Huelva district a copper strike is declared, affecting about 20,000 miners.

Oct. 25. Count Romanones and his cabinet resign on the refusal of a vote of confidence at the opening of parliament. **Eduardo Dato accepts premiership** October 27, and forms a representative Conservative ministry.

Oct. 31. Joseph E. Willard, the first United States ambassador to Spain, is received by King Alfonso in Madrid.

1914. *Sept. 14.* A Spanish column inflicts a severe defeat upon a force of Moors at Abd-el-Homan.

SWEDEN.

1910. *Aug. 1.* Eighteenth **Universal Peace Congress** opens at Stockholm. Five hundred are in attendance from twenty-two nations.

1911. *Sept. 30.* General election results in overthrow of the Lindman ministry, and establishment of **Liberal government** under Karl A. Staaff.

1912. *July 1.* The fifth revival of the **Olympic games** opens at Stockholm. At their conclusion, July 22, Sweden heads the lists with 133 points, United States is second with 129 points, Great Britain third with 76 points. In track and field events, United States leads with 85 points, scoring 16 firsts, 12 seconds, and 13 thirds.

1913. *July 3.* Old age pensions law is passed.

Dec. 30. Dowager Queen Sophia dies.

1914. *Feb. 6.* More than 30,000 peasants and landowners from all parts of Sweden parade before the King at Stockholm to demand an **increase of armaments.** Cabinet regards as unconstitutional the King's free expression of political opinion, and resigns February 10.

Feb. 16. Baron Hammarskjoeld forms new cabinet, succeeding the one under Karl A. Staaff, which resigned in protest against the King's stand for increased armaments.

March 3. Parliament is dissolved owing to the armament controversy.

Dec. 18. King Gustavus, with King Haakon of Norway and King Christian of Denmark, meet at Malmö in regard to the Great War. See GERMANY.

SWITZERLAND.

1911. *March 31.* The **Lötschberg tunnel** through the Bernese Alps between Switzerland and Italy is completed. It was begun in October, 1906, and is 9.04 miles in length.

1912. *Feb. 4.* Referendum is held on the **sickness and accident insurance bill,** and the measure is adopted after a keen contest.

1913. *April 4.* Federal Council ratifies St. Gothard Railway Convention drawn up in Berne in 1909, and afterwards ratified by Germany and Italy.

June 23. The Lötschberg tunnel is formally opened. See March 31, 1911.

Dec. 10. Nobel chemistry prize is awarded to Prof. A. Werner of Zurich.

Dec. 11. **Dr. Arthur Hoffman** of St. Gall **is elected president** of the Swiss Confederation.

1914. *Dec. 18.* Vice President **Giuseppe Motta is elected president** of the Confederation.

TURKEY.

1910. *Jan. 6.* The Porte sends a note to the four protecting powers (Great Britain, Russia, France, and Italy) remonstrating against the action of the Cretan government in deciding that their officials should swear allegiance to the king of Greece.

Feb. 12. The Cretan government is cautioned by the Powers against the continuance of a provocative attitude towards the Porte. This is followed by an ultimatum on July 3.

Oct. 8. Over 800 Druses are killed by the Turkish forces sent into northwest Syria to collect arms.

For war with Italy, see ITALY.

1911. *April 20.* **Rebellion** against Turkish rule breaks out **in Albania.** The insurgents are severely dealt with, and many atrocities are alleged. To conciliate foreign opinion, the Turkish government in August concedes nearly all the demands of the rebels, and grants a general amnesty.

Oct. 4. New cabinet is formed by Said Pasha, but resigns December 30.

1912. *Jan. 3.* Cabinet is reconstructed by Said Pasha.

Jan. 18. Chamber of Deputies is dissolved by imperial decree.

1912. *Feb. 28.* Great Britain, France, and Russia decide to send warships to Crete, fearing that the reported attacks on the Mohammedans by Christians might culminate in a war with Greece.

In March. Extremists in the Cretan Assembly gain the upper hand, and elect delegates to the Greek Assembly. Foreign warships prevent the delegates from reaching Athens.

April 28. Fire devastates the bazaars of Damascus, Syria; loss $10,000,000.

June 3. Two thousand houses and several mosques are destroyed by fire at Stamboul.

July 17. Said Pasha's cabinet resigns. Tewfik Pasha, Turkish ambassador in London, is appointed, but his conditions not being accepted Mukhtar Pasha is made grand vizier July 21. Army officers demand dissolution of deputies July 25. Parliament is dissolved August 5.

In July. The **Albanians revolt;** take Prishtina and Prizren July 24; enter Saloniki August 20; attack Durazzo August 22; take Berat August 25. An Albanian commission is appointed and extensive reforms are promised.

Aug. 5. Martial law is proclaimed in Constantinople.

Sept. 30. The critical situation in the Balkans culminates in the confederation of Bulgaria, Servia, Montenegro, and Greece against Turkey, and in the mobilization of the allied armies.

In October. **The Balkan War** breaks out. Skirmishes are reported from several points on the Montenegrin, Servian, and Bulgarian frontier October 4. **The Montenegrins** formally declare war and cross the frontier October 8, advancing on Scutari, the capital of Albania. They gain various minor successes, notably at Byelopole in Novibazar sanjak (Old Servia) October 13; Tushi October 14; and Berane October 16. An **identical note** is presented to the Porte by Bulgaria, Servia, and Greece, demanding autonomy for Macedonia, Christian governors of the provinces, and withdrawal of Turkish troops. Regarding this as an ultimatum, Turkey declares war upon Bulgaria and Servia October 17. Greece also declares war on Turkey October 18. Fighting now becomes general, the allies penetrating the Ottoman territory and sweeping the Turks before them. **The Bulgarians,** numbering about 300,000 men, force their way toward Adrianople, occupying Mustafa Pasha, an important strategic position 20 miles northwest of Adrianople, on October 19, and capturing Kirk Kilise on the east October 25. By the 27th, **Adrianople** is closely **besieged,** and Eski-Baba captured. After a three days' engagement, extending along a fighting front of 31 miles, the Turkish army is routed in the great **battle of Lüle-Burgas** October 31, and the defenders are driven back upon Constantinople. Meanwhile **the Greeks** invade Macedonia, capturing Elassona and the town of Servia October 24, and, after various successes, occupying Karaferieh (or Veria) on the Saloniki-Monastir railroad October 31. In the northwest, **the Servians** take Prishtina October 22; Novibazar October 23; Sienitza and Usküp, the former capital of Old Servia, October 26.

Chief causes of Turkish defeats: Disorganization of the army; attempt to fight simultaneous campaigns in Thrace and Macedonia; no well-devised plan of campaign; breakdown of the commissariat transport arrangements.

Nov. 1–12. The Bulgarians occupy Demotika November 1, thus cutting communication between Adrianople and Constantinople. November 3, the Porte asks the Powers to mediate. The Turks prepare to make their last stand at the **Chatalja lines,** which guard the approaches to the capital. Cholera breaks out in the ranks of the opposing armies at Chatalja. November 10, the Porte, as a precautionary measure, orders the disarmament of the Stamboul populace. Macedonia is meanwhile overrun by the allies. Saloniki being the coveted objective. The **Greeks occupy Saloniki** November 8, and the Servian and Bulgarian forces also enter November 10. King George of Greece enters amid great enthusiasm November 12. Other Greek successes are the sinking of a Turkish cruiser November 1; capture of Yenije-Vardar and Prevesa (the southernmost point of Turkey in Europe) November 3; seizing of Tenedos, an island near entrance to Dardanelles, November 6. A Servian force takes Prilip, northeast of Monastir, November 10.

Nov. 13. The Turkish commander in chief applies to the Bulgarian commander for an eight days' armistice, with a view to open direct negotiations for peace. Armistice is signed November 14.

Nov. 18. Monastir, the remaining Turkish stronghold in Macedonia, surrenders to the Servians.

Joint force of Montenegrins and Servians enters Alessio.

Bulgarians attack the Chatalja lines without success. A truce is arranged on November 20, the Turks break off negotiations on the 21st, and resume them on the 24th.

Nov. 28. Servia occupies the Adriatic port of Durazzo, in defiance of Austria and ignoring the Albanian declaration of independence.

Dec. 3. An **armistice is concluded** between Turkey and Bulgaria, Servia, and Montenegro. Greece is not a signatory.

Dec. 16. **Peace conference opens in London,** at St. James's palace, attended by plenipotentiaries of Bulgaria, Servia, Montenegro, Greece, and Turkey. The proceedings are protracted, chiefly owing to the reluctance of the Turks to cede Adrianople and Ægean islands. Long-range encounters between Greek and Turkish warships are reported.

1913. *Jan. 6.* The peace conference in London adjourns *sine die,* having reached a deadlock over the cession of Adrianople and the Ægean islands.

Jan. 17. Collective note of European powers is presented to Turkish government, advising acceptance of terms of the allies.

Jan. 22. The Grand Council indorses the cabinet's decision to secure peace by accepting the proposals of the powers.

Jan. 23. **Young Turks seize reins of power.** Led by Enver Bey they force Grand Vizier Kiamil Pasha and his cabinet to resign, and Mahmud Shevket Pasha, commander of the constitutional revolution which placed Mohammed V. upon the throne, is appointed Grand Vizier. The populace declares for war rather than give up Adrianople. Nazim Pasha, minister of war and commander in chief, is shot dead during the demonstrations.

Jan. 29. Peace negotiations are finally broken off by the plenipotentiaries of the allied Balkan states, and next day the **armistice is denounced.**

Jan. 30. The Porte presents its reply to joint note of the powers, asking the retention of that section of Adrianople where the holy shrines are situated, the question of the Ægean islands being left to the powers.

Feb. 3. **The Balkan War is resumed.** Adrianople is again bombarded. During the month severe fighting takes place on the Gallipoli peninsula, the allies trying to open the Dardanelles for the Greek fleet.

Feb. 12. The Porte requests the intervention of the European powers, but the powers decline to reopen peace negotiations.

Feb. 14. Several engagements are reported in which victories are won by the Bulgarians and Greeks against the Turks.

March 6. The Turkish fortress of **Janina** near the Greek border capitulates to the Greeks, after a three months' siege.

March 15. Balkan allies offer to accept mediation by the powers upon condition that the Ægean islands and all the European territory except the Gallipoli peninsula are ceded by Turkey.

March 25. The powers deliver ultimatum that war must cease.

March 26. **Adrianople is taken** by Bulgarians and Servians after a five months' siege, the Turks setting fire to the depots and barracks. King Ferdinand of Bulgaria receives the formal surrender of its commandant, Shukri Pasha, on March 28.

March 29. Bulgarian forces, pushed on from Adrianople, press the attack on the Chatalja lines, where fighting has occurred almost daily since the resumption of hostilities.

In March. In **Albania,** conflicting interests claim the attention of the powers. Montenegro carries on the siege of Scutari with renewed vigor, capturing the outlying fortress of Tarabosh on April 1. Servia still hopes to acquire an Adriatic port. The Albanians themselves desire complete independence. The powers, in deference to Austria-Hungary, agree to incorporate Scutari in an autonomous Albanian state and to grant Servia commercial access to the Adriatic over a neutral railway, though denying her the acquisition of a port. In return Servia and Montenegro are to retain the debatable territories of Ipek, Prizren, Dibra, and Jakova. The northern and eastern boundaries of the new Albania are agreed upon March 26, thus relaxing the Austro-Russian tension and resulting in the withdrawal of Austrian and Russian troops from the Galician border. See MONTENEGRO.

1913. *April 1.* Turkey accepts the terms of peace proposed by the powers, the European boundary being fixed in a line from Enos to Midia. On behalf of the Balkan allies, Bulgaria makes counter proposals April 5.

April 19. **Armistice** is signed by all the belligerents except Montenegro.

April 23. **Scutari surrenders** to Montenegrins after a six months' siege.

April 27. Essad Pasha, Turkish defender of Scutari, proclaims himself king of Albania; he is assassinated at Tirana, May 20.

May 14. Scutari is evacuated by Montenegrins and occupied by an international force from the blockading fleet under British Vice Admiral Burney.

May 30. **Treaty of peace** is signed in London by representatives of Turkey, Bulgaria, Servia, Montenegro, and Greece, terminating the eight months' war between Turkey and the Balkan federation, and ceding to the allies all territory west of the Enos-Midia line, as well as Crete, the future of Albania and the Ægean islands being left to the adjudication of the powers, and financial questions to the decision of an International Commission at Paris. This treaty is short-lived, for the division of the spoils results in the **disruption of the Balkan League** and precipitates the Second Balkan War. See BULGARIA, 1913.

June 11. Mahmud Shevket Pasha, Grand Vizier, is assassinated at Constantinople. He is succeeded by Prince Said Halim.

July 20–22. Taking advantage of the war waged against Bulgaria by Servia, Greece, and Roumania, the **Turkish forces reoccupy Adrianople** and Kirk Kilise without serious opposition.

Sept. 29. **Treaty of Constantinople** is signed, settling the Turko-Bulgarian boundary question. The line follows the Maritsa river from its mouth to a point near Mandra, thence in a northern direction to the west of Demotika and Adrianople, and thence eastward, north of Kirk Kilise, to Sveti Stefan on the Black Sea.

Nov. 13. Treaty of peace is signed at Athens, ending the war with Greece.

Dec. 13. Euphrates barrage from Hindia north to Bagdad is opened. It is the first completed part of the irrigation scheme designed for the Ottoman government by Sir William Willcocks, designer of the Assuan dam, and which is intended to restore the fertility of the traditional Garden of Eden.

1914. *March 14.* Treaty of peace is signed with Servia.

Sept. 10. The Porte abrogates the conventions known as the **Capitulations,** under which foreigners have been exempt from local jurisdiction and have enjoyed other special privileges.

Oct. 30. Turkish warships, led by the *Goeben* and *Breslau* under German officers, intercept Russian merchantmen in Black Sea and bombard Odessa.

Nov. 5. **War is declared against Turkey by England, France, and Russia.** See GERMANY. The Great War.

Dec. 24. German General von der Goltz becomes adviser general to the Turkish army.

1915. For the Great War, see GERMANY.

URUGUAY.

1912. *In January.* An insurance-monopoly bill being sanctioned by the Congress, an **insurance bank** is established in Montevideo.

1913. *June 7.* Arbitration treaty with United States is concluded in Senate.

VENEZUELA.

1910. *April 27.* Congress elects Juan Vicente Gómez president.

1911. *June 24–July 24.* **Centennial of the declaration of independence** is celebrated.

Nov. 17. Revolutionary forces under former President Castro are defeated near San Cristóbal.

1912. *March 21–23.* Official visit of P. C. Knox, U. S. Secretary of State.

April 30. Cabinet resigns, and new ministry is formed by Gen. Pulido.

1913. *In May.* Plots against life of president are discovered, and suspected conspirators are arrested.

Aug. 1. Following the arrival of **ex-President Castro,** dictatorial powers are granted to President Gómez by the Federal Council. On August 2, Castro declares his intention of waging war against Gómez.

Aug. 18. Coro, the rebel stronghold, is captured by government troops; the Castro rebellion collapses.

1914. *April 19.* General V. Marquez Bustillos is chosen provisional president to succeed President Gómez, resigned.

UNITED STATES OF AMERICA.

1910. *Jan. 1.* In Tennessee, a law making the **manufacture of intoxicating liquors unlawful** goes into effect.

Jan. 7. The President recommends that the interstate commerce and antitrust laws be made more elastic in their application, and that a **Court of Commerce** be established to have jurisdiction over many of the questions arising under those laws.

The President directs the **removal of Gifford Pinchot,** chief forester, and two of his assistants, on the ground of insubordination.

Jan. 10. Resolution for an investigation of the **Ballinger-Pinchot controversy** by a joint committee of the Senate and the House is adopted. On January 12, the President nominates H. S. Graves for chief forester.

Jan. 13. A conference of governors opens at Washington.

Jan. 30. In the New York senate, Senator Benn Conger prefers charges of accepting a bribe against Senator Jotham P. Allds. The charges are later sustained. Allds and Conger resign.

Feb. 4. A jury at Hartford, Conn., renders a verdict against a hatmaker's union for $74,000 damages in favor of a company whose goods the union had boycotted.

Feb. 9. More than **4,000,000 acres** of lands held in the **forest reserves** are thrown open to settlement by the Secretary of Agriculture.

Feb. 19. A strike of Philadelphia street railway employees is declared. Violent rioting follows for more than a week. Strike ends April 17. It is estimated that the strike has cost the company $2,300,000.

In February. The American Sugar Refining Co. pays more than **$600,000 for back duties** on underweighed imported sugar.

Cleveland, O., by referendum grants a new street railway franchise with four cents as the maximum fare.

1910. *March 2.* A bill is introduced in the Senate providing for the incorporation of a **"Rockefeller Foundation"** to which, it is announced, John D. Rockefeller will donate more than **$100,000,000,** to be administered under government supervision for general humanitarian purposes.

Two trains are buried by avalanches on Great Northern Railroad in Cascade Mountains. About one hundred persons are killed.

March 16. Barney Oldfield at Daytona, Florida, in an automobile covers a mile in 27⅘ seconds, the **fastest mile** ever traveled.

March 17. **Theodore Roosevelt leaves** Khartum, **Africa,** on his return to America. During March and April he visits Egypt, Italy, Austria, France, and Germany, and is everywhere received with notable enthusiasm.

March 18. In a speech at Rochester, N. Y., the President announces **a tariff arrangement with Canada** which is expected to minimize friction and increase trade between the two countries.

March 19. The Republican "insurgents" in the House of Representatives, aided by the Democrats, carry a resolution providing for the **reorganization of the committee on rules** and making the speaker ineligible to membership, thereby greatly reducing his power.

March 21. **Forty** present and past **city officials** of Pittsburgh, Pa., are indicted for accepting or soliciting bribes. Most of those accused confess. Later, many prominent men are indicted for bribery and corruption.

April 2. A bill **disfranchising negroes** in all state and municipal elections is passed by the legislature of Maryland.

April 5. Emil Seidel, a Socialist, is elected mayor of Milwaukee.

April 10. The Interstate Commerce Commission announces a ruling fixing **less price for upper berths** than for lower **in Pullman sleeping cars** on certain railroads and, in many cases, less prices for all berths.

April 26. The building of the International Bureau of the American Republics in Washington is dedicated by the President.

Passing of the Anti-Race-Track Gambling bills dooms professional bookmaking in New York State.

May 5. Ratifications of an **international waterways treaty** between the United States and Canada, providing for free use by both of boundary waters and investing an international joint commission with jurisdiction over questions arising along the frontier, are exchanged by British Ambassador Bryce and Secretary of State Knox.

May 22. A treaty fixing the coast **boundary between New Brunswick and Maine** is signed at Washington.

May 29. Glenn Curtiss flies from Albany to New York in his biplane, with one stop, in 2 hours and 37 minutes actual flying time.

June 16. The Senate passes the bill enabling **New Mexico and Arizona** to form state constitutions and governments, and, on June 20, President Taft signs the bill.

June 18. Congress passes a bill bringing telephone, telegraph, express, and sleeping-car companies under the control of the Interstate Commerce Commission. It provides for a new **Commerce Court** to which appeals will lie from the Interstate Commerce Commission, prohibits greater charges for a short than for a long haul, and empowers the Commission to suspend, temporarily, increase in rates pending investigation.

Theodore **Roosevelt** receives an **enthusiastic welcome** on his arrival in New York from his travels in Africa and Europe.

June 25. **Postal Savings Bank** bill becomes a law. Certain post offices may receive deposits of $1 to $500 and pay 2% interest or give government bonds bearing 2½% interest in exchange.

June 29. The Interstate Commerce Commission orders substantial reductions in freight rates on many western railroads.

June 30. Customs receipts for the year are $333,683,445, the largest ever collected. Postal deficit for the year is reduced by economies of administration from $17,600,000 to $6,000,000.

July 21. Devastating forest fires in Washington, Michigan, Montana, Wisconsin, Manitoba, and Ontario wipe out four towns.

Aug. 1. The **Pennsylvania Railroad's new station** in New York City is opened formally.

Aug. 5. A monument to the Pilgrims is dedicated at Provincetown, Mass. President Taft delivers the address.

Aug. 9. **Mayor William J. Gaynor** of New York **is shot** and severely wounded, on the deck of a steamer on which he is about to sail for Europe. His assassin is a discharged dock laborer.

Aug. 13. Serious rioting in connection with the strike of street railway employees at Columbus, Ohio. Gov. Harmon sends state troops.

Aug. 31. Mr. Roosevelt at Osawatomie, Kans., outlines **"New Nationalism"** as meaning government supervision of the capitalizing of interstate corporations and of combinations controlling the necessaries of life; graduated income and inheritance taxes; labor regulations, etc.

In August. **Forest fires** cause great loss of life and property in the Northwest, especially in Montana and Idaho.

Sept. 5. A **national conservation congress** is opened at St. Paul.

Sept. 7. The International Court of Arbitration at The Hague announces its **decision in the Newfoundland fisheries arbitration.** Neither party is sustained as to all its claims.

Sept. 12. A federal grand jury at Chicago indicts many high officials **of leading meat packing companies** for violations of the antitrust law.

Frederick W. Plaisted is elected governor of Maine, the **first Democratic governor** in thirty years.

Oct. 1. Grant in an Alco car wins the Vanderbilt Cup race for the second consecutive year. There are four fatalities in connection with the race.

Oct. 4. William H. Moody resigns as associate justice of the United States Supreme Court, on account of ill health.

Oct. 5. **St. Patrick's Cathedral** in New York City **is consecrated.**

Oct. 10. **Charles Evans Hughes** is sworn in as associate justice of the United States Supreme Court.

Forest fires in northern Minnesota and adjoining portions of Canada ravage several small towns and cause a loss of about 400 lives.

Oct. 15. **Walter Wellman,** with a crew of four, starts from Atlantic City, N. J., in the dirigible balloon *America* in an attempt to cross to Europe. Balloon is disabled, and its crew are rescued off Cape Hatteras.

Oct. 17. The **Rockefeller Institute for Medical Research** is formally **opened** at New York City.

Oct. 19. Alan R. Hawley and Augustus Post in the balloon *America II.* win the **international balloon race** from St. Louis, landing north of Lake St. John, Canada, 1172.9 miles from their starting point.

Oct. 22–30. Greatest aviation meet yet held in America is held at Belmont Park, Long Island. **Claude Grahame-White,** an Englishman, wins the Coupe Internationale d'Aviation (the **Gordon Bennett Cup**), in a 100-horse-power Blériot monoplane.

1910. *Oct. 28.* The **strike** for higher wages **of express companies'** employees in Jersey City, Hoboken, and New York becomes general. Until its settlement by a compromise on November 12, it is accompanied with considerable disorder and great inconvenience.

Oct. 31. Edward Robinson succeeds Sir Caspar Purdon Clarke as director of the Metropolitan Museum of Art.

In October. The following names were added to the New York University **Hall of Fame:** Harriet Beecher Stowe, Oliver Wendell Holmes, Edgar Allan Poe, Roger Williams, James Fenimore Cooper, Phillips Brooks, William Cullen Bryant, Frances E. Willard, Andrew Jackson, George Bancroft, John Lothrop Motley.

Nov. 2. A fleet of sixteen battleships sails to pay visits, in two detachments, at ports of England and France.

Nov. 8. The **state and congressional elections** result in **great gains for the Democrats.** Judson Harmon in Ohio, John A. Dix in New York, Simeon E. Baldwin in Connecticut, Eugene N. Foss in Massachusetts, and Woodrow Wilson in New Jersey are among the successful Democratic candidates for governor. Democrats will have a majority of about sixty in the sixty-second congress. Victor L. Berger of Milwaukee is the first member of congress elected on the Socialist ticket. Washington (state) adopts a constitutional amendment conferring the suffrage upon women.

Nov. 10. **President Taft sails for Panama** on a tour of inspection.

Nov. 11. Savings-bank deposits of the country amount to more than $4,000,000,000, an increase since 1909 of about $357,000,000.

Nov. 21. Post-Office Department raids many "get-rich-quick" investment companies and promoters, and estimates that they have swindled the public out of more than $100,000,000 within a few years.

Dec. 3. **Mrs. Mary Baker Glover Eddy,** the founder and head of the Christian Science Church, **dies** at her home near Boston.

Dec. 7. Congressional committee appointed to investigate the conduct in office of Secretary of the Interior **Ballinger** files a majority report exonerating him from all charges. The previously filed minority report was adverse to Secretary Ballinger.

Dec. 10. Census Bureau announces that the **population of the United States,** exclusive of the army and navy, Alaska, Hawaii, and Porto Rico is 91,972,266; with the army and navy, 92,027,874; an increase of 20% since 1900. The population of Alaska is 64,356, of Hawaii 191,909, of Porto Rico 1,118,012.

Dec. 26. At Los Angeles, Archie Hoxsey in a Wright biplane ascends to a height of 11,474 feet.

Dec. 31. Two noted aviators are killed, Archie Hoxsey, at Los Angeles, and John B. Moisant, at New Orleans.

In 1910. Immigration, 1,041,570. Imports, $1,557,819,988. Exports, $1,744,984,720.

In 1910. A general demand from **railroad employees** for **increased pay** and easier hours is made early in the year and is met by arbitration. Many railroads concede a ten-hour day.

The year is one of fairly prosperous **business conditions.** Uncertainty as to the scope and interpretation of the Sherman Antitrust Law causes uneasiness among combinations of companies and firms. Many indictments are brought against railroads, manufacturing corporations, and dealers in food or supplies alleging offenses against interstate commerce laws or conspiracy in restraint of trade.

The **elections** show very widespread Democratic gains and much loosening and breaking of party ties. Within the Republican party a revolt of the more radical element under the name of "insurgents" or "progressives" is general and in many quarters successful.

The great progress in **aviation** is one of the most marked features of the year in the United States, as in Europe.

The year in the Philippines has been uneventful and reasonably prosperous.

1911. *Jan. 3.* U. S. Supreme Court sustains the constitutionality of the **bank deposit guarantee laws** of Oklahoma, Nebraska, and Kansas, compelling banks to contribute to a fund securing depositors against loss.

First postal savings banks are opened at selected points.

Contract labor law of Alabama is declared **unconstitutional,** on the ground that it establishes peonage.

Jan. 7. **Carnegie Trust Company** in New York City **is closed.** Gross and far-reaching financial irregularities are disclosed. Prosecutions follow.

Jan. 10. The state of **Pennsylvania recovers $1,300,000,** and warrants aggregating $200,000, from the contractors for the state capitol. Further criminal prosecutions are dropped.

Jan. 17. Explosion on the battleship *Delaware* kills eight men.

Monetary Commission announces a plan for a central association of national banks under the name of **National Reserve Association,** to aid in giving flexibility to the banking resources of the country.

Jan. 20. Andrew Carnegie gives **$10,000,000** to the **Carnegie Institution,** in addition to previous gifts of $15,000,000.

It is announced that the commissioners have agreed on a **reciprocity agreement between Canada and the United States.** On February 14, it passes the House, 221 to 92, but Congress expires without further action. On April 5, the President sends a strong message in favor of the agreement to Congress in special session. It passes the House on April 21, 265 to 89, and the Senate on July 21, 53 to 27. It is killed by the overturn of the Canadian ministry in the elections of September 21.

Jan. 23. **National Progressive Republican League is organized.** It aims at greater control by the people, adequate corrupt practices acts, and State regulation of all great financial interests.

Jan. 28–30. Eruption of Taal volcano in Luzon destroys many villages and about 300 people.

Feb. 7. The mayor of Seattle, Washington, is "recalled." This is the **first prominent instance of the use of the recall.**

Feb. 15. **Commerce Court** sits for the first time.

Senate ratifies convention creating an **international prize court.**

Feb. 23. Interstate Commerce Commissioner **refuses to sanction an increase in freight rates** on railroads of the East and Middle West.

Feb. 24. Senate ratifies the new commercial treaty with Japan.

Feb. 28. **New treaty with Japan,** eliminating restrictions on immigration, is ratified by the Senate.

March 3. Robert E. Peary is retired with the rank of rear admiral.

March 4. Congress votes $2,000,000 for fortification of Panama Canal.

Sixty-first Congress expires. The President calls a special session of the Sixty-second Congress, to meet April 4.

March 7. The President orders **20,000 troops to San Antonio** and along the Mexican frontier, for division maneuvers and to check filibustering and border fighting on the American side in the Mexican revolution. The troops are recalled June 24.

1911. *March 24.* **Workmen's compensation law is declared unconstitutional** by the New York Court of Appeals.

March 25. More than 140 persons, almost all girls, are killed by a fire in a shirt-waist loft factory in Washington Place, New York City.

March 29. New York State Capitol is partially destroyed by fire. Many valuable historical documents are lost. Damage more than $5,000,000.

April 4. Sixty-second Congress meets in special session. The House elects Champ Clark, a Democrat, speaker.

April 14. President Taft cautions Mexico against fighting so close to the border as to endanger Americans.

April 19. Completed portion of **Cathedral of St. John the Divine,** New York, is consecrated.

April 22. **John J. McNamara,** secretary-treasurer of the International Association of Bridge and Structural Iron-Workers, is arrested at Indianapolis, and James B. McNamara and Ortie E. McManigle at Detroit, on a charge of having been a party to dynamiting the Los Angeles *Times* building on October 1, 1910, when twenty-one were killed. The prisoners are arraigned secretly and removed to Los Angeles. Labor Union officials denounce the proceedings and great sums are raised for the defense. The trial of the McNamaras begins at Los Angeles on October 11. Before the jury is completed, on December 1, **James B. McNamara confesses** to having blown up the *Times* building and John J. McNamara to having dynamited the Llewellyn Iron Works. On December 5, James B. McNamara is sentenced to life imprisonment and John J. McNamara to fifteen years imprisonment.

April 30. Fire at Bangor, Me.; loss $6,000,000.

May 1. U. S. Supreme Court decides that the federal government has exclusive control over the public lands of the nation.

May 8. Direct telephone communication between New York and Denver is opened.

May 15. U. S. Supreme Court **sustains the decree dissolving the Standard Oil Company** of New Jersey for violation of the Sherman Anti-trust Law and orders a dissolution within six months. The court, Judge Harlan dissenting, holds that the law must be interpreted "in the light of reason" and that only "undue" restraint of trade is prohibited.

May 23. The new building of the New York Public Library, costing over $10,000,000, is opened.

May 27. "Dreamland" at Coney Island, New York, is burned; loss about $5,000,000.

May 29. The Supreme Court sustains the decree ordering the **disintegration of the American Tobacco Company** for violating the Sherman law. The Circuit Court is ordered to formulate a plan of reorganization (the first time such a mandate has issued). On November 8, the Circuit Court approves a plan of disintegration and reorganization.

June 9. The American polo team wins the second game of three from the British challengers and retains the International Polo Cup.

June 19. President and Mrs. Taft celebrate at the White House their twenty-fifth wedding anniversary.

June 21. The *Olympic* (45,000 tons; 882 feet long) arrives at New York from Liverpool on her maiden voyage.

June 26. **Cunningham claims are declared invalid.** They involve the monopoly of 5,250 acres of coal lands in Alaska.

In June. **Extensive customs frauds** are disclosed, especially in regard to laces, millinery, dress goods, jewelry, and sugar. Many prosecutions follow, and heavy fines are inflicted.

Second division of the Atlantic fleet visits Europe, and is inspected by the German and Russian emperors.

July 1. Interstate Commerce Commission begins an elaborate **investigation of the express companies** engaged in interstate traffic.

July 2–11. Unusually intense heat east of the Rocky Mountains. Many deaths are reported.

July 7. A treaty is signed at Washington between the United States, Japan, Great Britain, and Russia, prohibiting pelagic sealing for 15 years.

Aug. 3. Admiral Togo, of Japan, is received as the guest of the nation.

Aug. 8. The membership of the House is fixed at 435, one member for each 211,877 inhabitants.

Aug. 14–25. H. N. Atwood flies in a biplane from St. Louis to New York.

Aug. 17. The President **vetoes a bill reducing the tariff on wool,** demanding that it await the report of an investigating commission.

Aug. 19. An act is passed requiring publicity of contributions in congressional elections, and limiting campaign expenses of representative to $5,000 and of senator to $10,000.

Aug. 21. The President signs the bill providing for the admission of **New Mexico and Arizona to statehood,** the provision in the Arizona constitution for the recall of judges being eliminated.

Sept. 11. Maine **defeats the proposed repeal of the prohibition** clause in its constitution by about 100 votes.

Sept. 11–16. A conference of the governors of many states is held at Spring Lake, New Jersey.

Sept. 15. **Charges against Dr. Wiley,** chief of the Bureau of Chemistry, declared ungrounded; certain subordinate officers are reproved.

Sept. 15–Nov. 12. President Taft makes an extended speaking tour.

Sept. 30. The bursting of the dam of a pulp mill destroys Austin, Pennsylvania; 100 lives lost.

Oct. 11. California adopts a constitutional amendment giving the **full vote to women.** It also adopts amendments providing for the initiative, referendum, and recall of all elective officials, including judges.

Oct. 14. Associate Justice John M. Harlan of the U. S. Supreme Court dies after a service of 34 years.

Oct. 26. The Government begins suit in New Jersey against the United States Steel Corporation for its dissolution for violation of the Sherman Antitrust law.

Oct. 30–Nov. 2. The **greatest fleet of United States naval vessels** ever assembled is mobilized at New York, and reviewed by the President.

Nov. 5. C. P. Rodgers, who left New York in a biplane on September 17, arrives at Pasadena, California. Distance, 4,231 miles. Flying time 4,924 minutes.

Nov. 9. The Lincoln Memorial is dedicated at Frankfort, Kentucky, Lincoln's birthplace. It preserves the log cabin where he was born.

Nov. 10. Andrew Carnegie announces the gift of $25,000,000 to establish and maintain the **Carnegie Corporation for the Promotion of Education.**

Nov. 27. It is announced that Archbishop Farley of New York, Bishop O'Connell of Boston, and Mgr. Falconio, the apostolic delegate to the United States, have been created cardinals.

Dec. 4. Sixty-second Congress meets in regular session. The President sends separate messages dealing with specific matters, especially legislation for the regulation of business and arbitration.

John D. Rockefeller resigns as president of the Standard Oil Company.

Dec. 8. Board of army and navy officers appointed to inspect the wreck of the *Maine* reports that the ship was blown up by an exterior explosion.

1911. *Dec. 18.* The President informs the Senate that he has notified Russia of the abrogation of the treaty between the two countries, because of Russia's refusal to recognize American passports in the hands of Jews, clergymen of certain evangelical denominations, and others.

Dec. 20. The President sends to Congress the report of the tariff board on schedule (K) affecting wool, and recommends reductions in the tariff affecting this schedule.

Dec. 21. The President recommends to Congress the adoption of some plan of currency reform and the formation of a central association of national banks.

In 1911. Immigration, 878,587. Imports, $1,527,226,105. Exports, $2,049,320,199.

In 1911. The most notable general features of the year are the steady, although slow and cautious, revival of business confidence and expansion of enterprise and the unusual political and social unrest. Increased sternness in the Government's dealings with corporations alleged to be violating the antitrust laws, the institution of many prosecutions and suits for dissolution, and the decisions of the Supreme Court in the Standard Oil Company and American Tobacco Company cases, all force widespread attention to be given to the future possibilities and limitations of large combinations of capital.

The system of direct nomination for all elective state offices obtains in more than two-thirds of the states. The popular demand for direct senatorial elections is not yet acted upon by Congress. Some states are adopting the "Oregon plan" of pledging candidates to vote for the people's choice for senators as indicated at the general election. Direct legislation in some form exists in twelve states, while several others are arranging for the adoption of both the initiative and the referendum. There are many instances and signs of insurgency in both the great political parties and much shifting of party lines. Minor but frequent Socialist successes tend to complicate the political outlook. The arrest and confessions of the McNamaras are regarded as likely to cause a marked change in the leadership or policy of many of the labor unions and to lead to a better understanding between Capital and Union Labor. In the Philippines the year is uneventful. The construction of the Panama Canal progresses most satisfactorily.

1912. *Jan. 6.* President Taft signs a proclamation **admitting New Mexico to the Union.**

Appellate Division of United States Supreme Court decides that banks are responsible to their customers where fraudulent checks are cashed.

Jan. 9. Equitable Life Assurance Building, New York, is completely destroyed by fire, with a loss of six lives and damage of $6,000,000.

United States troops are ordered from Manila to China to guard railroads.

Jan. 12. At Lawrence, Mass., the textile mill workers go out on strike on account of reduction in wages following the introduction of the new 54-hour law. The strike lasts for over two months, and is marked by many scenes of violence and frequent clashes with the military and police.

Jan. 15. Constitutionality of the employers' liability law is upheld by the United States Supreme Court. It is decided that an action to recover can be brought in a state court as well as in a federal court.

Jan. 18. President Taft pardons C. W. Morse, the banker convicted for misappropriation of trust funds.

Jan. 22. Duke and Duchess of Connaught arrive in New York on visit from Canada; first visit of British royalty since that of the Prince of Wales (afterwards King Edward VII.) in 1860.

First passenger train is run from Key West to the mainland over the extension of the Florida East Coast Railroad.

United States Supreme Court holds that railways must carry intoxicating liquors into "dry" territory when shipped from another state.

Feb. 1. Monsignor Bonzano is appointed by the Pope to succeed Cardinal Falconio as apostolic delegate to the United States.

Feb. 14. President Taft signs a proclamation **admitting Arizona to the Union.**

Feb. 19. In deciding the claim of the Pacific States Telephone and Telegraph Company that a tax upon it imposed by the initiative and referendum method in Oregon is unconstitutional, the **United States Supreme Court declines to declare invalid laws passed through the initiative and referendum,** holding that their constitutionality lies within the powers of Congress to decide, and therefore cannot be objected to by the Supreme Court.

Feb. 21. Great fire at Houston, Texas; estimated loss $7,000,000.

Feb. 24. The House of Representatives orders an **investigation of the "money trust"** with a view to legislation for the control of combinations. May 3, the House appropriates $25,000 for the inquiry. The Pujo committee begins its hearings at Washington May 16, adjourning June 14, and resuming December 9.

Feb. 25. Theodore Roosevelt, in reply to seven Republican governors, expresses his willingness to accept the nomination for president if offered.

Feb. 28. New Jersey passes law preventing justices of peace from performing marriage ceremony. A further law is passed, April 2, requiring 24 hours' interval between issue of marriage license and the ceremony.

American Tobacco Company is dissolved in compliance with court decree.

March 2. The President directs a strict compliance with the neutrality laws in all matters affecting Mexico, and warns citizens to keep out of Mexico till peace is restored.

March 7. Arbitration treaties with Great Britain and France, which were signed August 3, 1911, are ratified by the Senate after cancellation of the clause relating to a joint high commission and the adoption of amendments barring from arbitration questions affecting the Monroe Doctrine, admission of aliens, and state indebtedness.

First shipment of **J. P. Morgan's art treasures** arrives from England; remainder reaches New York May 4. Estimated value of collection $60,000,000. Under 1909 tariff law these works of art are now admitted free of duty.

March 9. Textile mills of New England grant general advance of wages from 5 per cent to 7 per cent.

March 11. United States Supreme Court, by four to three, holds that the owner of a patent has an unrestricted monopoly upon all articles used in its operation, may fix its price and prescribe its use.

March 13. New York State Assembly rescinds action favoring income tax.

March 14. Serious rioting takes place at the trial of the outlaw Floyd Allen at Hillsville, Va. The judge, sheriff, and attorney are shot and killed and others are wounded by friends of the prisoner as sentence is pronounced. The outlaws escape to the mountains.

March 16. The raised battleship *Maine* is towed out of Havana Harbor and sunk off the Cuban coast.

March 17. The Mississippi legislature passes bill imposing graduated income tax.

1912. *March 19.* The first state-wide presidential preference primary in United States history is held in North Dakota.

March 23. Under an act of Congress, residents of the Philippine Islands who were Spanish subjects in 1899 and their children shall be deemed citizens of the islands and under the protection of the United States.

March 24. Harvard observatory completes its photographic map of the heavens, after thirty years' work and a cost of $1,000,000.

In March. Pennsylvania coal miners strike for increased wages; severe rioting, especially at Scranton; working agreement between miners and operators is signed at Philadelphia May 20.

April 1. United States Supreme Court upholds the antitrust laws of Missouri, approving the state's action in ousting the Standard Oil Company of Indiana and the Republic Oil Company of New York from the state and fining each $50,000.

April 9. The Esch Match bill, imposing a tax of two cents a hundred on matches made of poisonous white phosphorus, becomes law.

April 15. Steamship *Titanic*, largest boat ever built, is lost on its maiden voyage from Southampton to New York. Of about 2200 persons on board more than 1300 perish, including many of international reputation. **The worst marine disaster in history.**

April 19. Senate orders a searching investigation of the *Titanic* disaster.

April 30. Federal government files suit in St. Paul against the **International Harvester Company** asking for its dissolution under Sherman Antitrust Law.

In April. Floods in the Mississippi valley devastate 200 square miles and render 30,000 people homeless; loss $50,000,000.

May 1. The Federal Steamship Inspection Service issues new regulations requiring all ocean steamships to carry sufficient lifeboats to accommodate every person on board.

May 3. **Tercentenary of Champlain** is celebrated at Crown Point on Lake Champlain. The Rodin bust "La France," presented by the French nation to the people of the United States, is to be placed at the base of the Champlain Memorial lighthouse at Crown Point.

May 11. President signs **pensions bill,** providing a dollar a day pension to certain soldiers and sailors who served in the Civil War and the war with Mexico, and involving an additional annual expenditure of over $25,000,000.

Prof. J. G. Hibben is installed as president of Princeton University.

May 13. Congress initiates a Constitutional Amendment for the **direct election of United States senators,** subject to federal control of the methods of election.

May 18. The superdreadnought *Texas*, largest United States battleship and first in the world to carry fourteen-inch guns, is launched at Newport News, Virginia.

May 21. Massachusetts legislature is the first to adopt a resolution ratifying the proposed amendment providing for the popular election of United States senators.

The House passes **Panama Canal bill exempting American coastwise shipping from tolls,** and levying a toll of $1.25 per registered ton on other vessels. In July, Great Britain protests, declaring such discrimination to be a violation of the Hay-Pauncefote treaty. The bill passes the Senate August 9, and is signed August 24. Great Britain renews protest August 28.

June 2. House of Representatives orders investigation of the Beef Trust.

June 5. A Minimum Wage bill is passed in Massachusetts, whereby wage boards shall recommend a wage scale in any industry in which women are inadequately paid.

June 19. President signs eight-hour bill for laborers on contract work for government.

June 22. At the Republican National Convention held in Chicago, President Taft and Vice President Sherman are renominated. **Theodore Roosevelt,** the rival Republican candidate, **bolts the party,** claiming that the will of the people has been fraudulently defeated. The Roosevelt delegates secede to another hall, and inaugurate a new national party (the Progressive) with Roosevelt as presidential candidate.

In June. Bubonic plague breaks out in Porto Rico, 19 cases with 7 deaths being reported up to June 23.

July 2. At the Democratic National Convention held in Baltimore, **Woodrow Wilson,** governor of New Jersey, is nominated for president, and **Thomas R. Marshall,** governor of Indiana, for vice president.

Cornerstone of Pulitzer School of Journalism at Columbia University is laid.

July 4. In a collision on the Delaware, Lackawanna, and Western Railroad, near Corning, N. Y., 41 persons are killed and about 60 injured.

July 11. The House of Representatives adopts by a vote of 222 to 1 a resolution directing the impeachment of Judge Robert W. Archbald of the United States Commerce Court.

July 13. The seat of William Lorimer of Illinois in the Senate is declared vacant because of corrupt methods of election.

July 16. Herman Rosenthal, a gambler, who had given evidence regarding the financial relations of the police with illegal resorts in New York City is assassinated. Subsequently police lieutenant Becker is convicted of instigating the crime and sentenced to death October 24. The four murderers of Rosenthal are sentenced to death November 19. Later Becker is granted a new trial.

Aug. 7. At the Progressive National Convention held in Chicago, Theodore Roosevelt is nominated for president, and Governor H. W. Johnson of California for vice president.

Aug. 9. In Detroit, Mich., 16 members of the council are arrested for conspiring to defraud the city by accepting bribes in connection with the passage of a bill affecting a railroad company. The case against two of these officials is dropped September 16.

By a joint resolution of Congress, the Secretary of State is directed to investigate the claims of United States citizens for damages suffered within American territory during the revolutionary warfare near the Mexican border.

Aug. 14. At Portland, Oregon, it is decided that persons unprovided with seats on the street railways shall pay only half fare.

Aug. 16. The President signs the Radio-Communication bill, forbidding private wireless installations near certain government stations.

Aug. 22. A countervailing duty is imposed on importations of wheat and rye flour and split peas from Germany, because of a bounty provided by the home government.

Aug. 23. The President signs bill prohibiting false claims on labels of drugs.

Aug. 24. An act is passed providing for a legislative assembly and woman suffrage in Alaska.

President signs Post Office Appropriation bill, with amendment providing for an experimental **parcel post.** The act further provides for the **federal regulation of newspapers and periodicals,** compelling them to file with the postmaster-general and publish a sworn statement giving the names of the editors, publishers, managers, and owners. An amended form of the bill is introduced in the House December 14.

1912. The second session of the Sixty-second Congress ends, having passed 253 public laws.

Oct. 1. A fifty-four hour law becomes effective in the industries of New York State.

Oct. 10. The Nobel prize for medicine is awarded to Dr. Alexis Carrel of the Rockefeller Institute, New York, for his researches and discoveries in the cultivation of tissues *in vitro*, the grafting of limbs and peripheral parts, and the transplantation of tissues and organs from one animal to another.

Oct. 12. United States District Court of Hartford, Conn., awards $250,000 damages against the United Hatters' Union in the Danbury hatters case.

Oct. 14. President Taft reviews a great fleet of 123 United States warships in the Hudson river at New York City.

Theodore Roosevelt is shot by a fanatic at Milwaukee, Wis., but in spite of the wound he proceeds to a mass meeting and speaks for an hour and a half. He recovers in about three weeks.

Oct. 16. A typhoon sweeps the Philippine Islands; estimated damage $25,000,000.

Oct. 30. Vice President James S. Sherman dies at Utica, N. Y.

In October. An inter-island parcel post is established in the Philippines.

Nov. 5. Presidential, Congressional, and State elections are held throughout the country, resulting in a general victory for the Democrats. **Woodrow Wilson is elected president, and Thomas R. Marshall vice president,** Wilson securing 435 votes in the Electoral College, to 88 for Theodore Roosevelt and 8 for William H. Taft. Popular vote: Wilson, Democrat, 6,303,063; Roosevelt, Progressive, 4,168,564; Taft, Republican, 3,439,529; Debs, Socialist, 898,119; Chafin, Prohibition, 203,319; Reimer, Socialist Labor, 29,061. Wilson's plurality over Roosevelt, 2,134,499; all others combined over Wilson, 2,435,529; total popular vote, all candidates, 15,041,655.

Nov. 8. United States cruisers are ordered to the Dardanelles to protect Americans in Constantinople during the Balkan War (see TURKEY). American interests meanwhile are being safeguarded by the British, and a British guard is placed over the United States consulate.

Nov. 14. Supreme court of Missouri fines the International Harvester Company $50,000, forbidding it to do business in the State.

Nov. 18. The United States Supreme Court, in ordering the dissolution of the "Bathtub Trust," holds that license agreements violate the Sherman Antitrust Law, and that, as there can be no monopoly in the unpatented product of a patented machine, the patent laws may not be used as a cloak for trusts.

Nov. 25. Prairie fires spread over 1,000 square miles in South Dakota; the town of White Owl is destroyed.

Nov. 26. A jury at Salem, Mass., acquits Ettor, Giovannitti, and Joseph Caruso of the charge of murder during the Lawrence textile strike riots.

A typhoon sweeps over the Philippine Islands to the south of Manila; between 15,000 and 17,000 lives are lost.

Nov. 29. Ex-City Chamberlain Charles H. Hyde is convicted of bribery in the manipulation of New York City funds on deposit.

Nov. 30. Andrew Carnegie, through the Carnegie Corporation, gives future ex-presidents and their widows (so long as they do not remarry) $25,000 a year.

Dec. 2. The dissolution of the Harriman merger of the Union Pacific and Southern Pacific railroads is ordered by the United States Supreme Court as a violation of the Sherman Antitrust Law.

Dec. 7. Twenty thousand skilled laborers in the United States navy yards are placed in the civil service.

Dec. 15. Whitelaw Reid, United States Ambassador to Great Britain, dies in London. A funeral service is held in Westminster Abbey, and the body is brought to New York by a British battleship, arriving January 3.

Dec. 16. Governor G. W. Donaghey of Arkansas pardons 360 convicts as a protest against the State's system of leasing prisoners. December 24, Governor Blease of South Carolina frees 79 convicts on similar grounds.

Dec. 28. Before the Federal Court sitting at Indianapolis, the president of the International Association of Bridge and Structural Ironworkers, and 37 of his colleagues, were convicted of complicity in a series of **dynamite outrages** during the past six years.

Dec. 31. Ex-President Castro, on his arrival from Europe, is taken from the steamer by federal officers, and removed to Ellis Island pending a decision whether he be permitted to enter the United States. See Feb. 15, 1913.

The treaty of 1832 with Russia lapses at midnight. See December 18, 1911.

In 1912. Immigration, 838,172. Imports, $1,653,264,934. Exports, $2,204,332,400.

In 1912. The **presidential election** is the dominant feature of the year. The campaign is fought with unusual bitterness, and for the first time a third term candidate receives nomination. Theodore Roosevelt enters the field as a Republican candidate, but his faction bolts on failing to control the regular convention, and inaugurates the National Progressive party with Roosevelt as its presidential candidate. This disruption of the Republican party, already foreshadowed by the growing insurgency, is largely responsible for the defeat of the Republicans. The Democrats are returned to power after 16 years of Republican rule. Their victory is convincing. The Democratic majority in the new House of Representatives is 147. The Democrats also control the Senate. Of the 35 State governors elected, 21 are Democrats. A striking feature of the election campaign is the prominent part taken by women, particularly on the side of the Progressives.

Three bills are passed in the interest of popular government and improved political conditions: (1) a bill submitting to the States a constitutional amendment providing for the direct election of United States senators; (2) an act requiring the publicity of campaign funds and election expenses of each candidate; (3) an act compelling newspapers to disclose their ownership. The total number of States with systems of direct nominations is now 36. In Oregon, Nebraska, New Jersey, North Dakota, Wisconsin, California, Illinois, Maryland, Massachusetts, Michigan, Montana, and South Dakota the system of presidential preference primaries is now established and receives its first test. The initiative and referendum are extended, and at the November elections the recall amendment is further adopted in Arizona, Colorado, Idaho, Nevada, and Washington.

Strikes at Lawrence, Mass., San Diego, and elsewhere give prominence to a newer and more radical plan of industrial unionism, identified with the **Industrial Workers of the World.** This organization adopts the propaganda of the French trade-unions or *syndicats*, seeking to achieve its ends by the general strike rather than by political measures, and is antagonistic alike to government, capital, and ordinary trade-unions.

Various actions are brought or decisions given under the **Sherman Antitrust Law.** Notable cases: the so-called Bathtub Trust, the International Harvester Co., the National Cash Register Co., the United Shoe Machinery

Co., the Keystone Watch Co., United States Steel Corporation, Hamburg American Packet Co., the Union Pacific and Southern Pacific Railroad Companies, and the packers of Chicago. Total number of cases brought under the Sherman Law (1890–1912), 128, viz., under Harrison, 7; Cleveland, 8; McKinley, 3; Roosevelt, 44; Taft, 66. The "Money Trust" investigation accumulates a mass of information regarding banking and monetary conditions.

1912. In the Philippines, steady industrial and commercial progress is shown. Education is improved, though as yet only one-third of the Filipino children of school age are being reached. In Porto Rico, marked progress is made in almost all public and private activities. The Panama Canal is rapidly approaching completion. The passage of the Canal Act, exempting coastwise shipping of the United States from tolls, gives rise to an international controversy.

1913. *Jan. 1.* **Parcel post goes into effect** throughout the country.

Jan. 3. Thos. A. Edison gives a demonstration of talking moving pictures.

Jan. 6. United States Supreme Court, in rendering a decision in the case of James A. Patten and others charged with conspiring to corner cotton two years ago, holds that an attempt to corner a commodity constitutes a criminal offense under the Sherman Antitrust Law.

United States Supreme Court orders absolute dissolution of merger between the Union Pacific Railway and the Southern Pacific Railway.

Jan. 7. The orange and lemon crops in California are damaged by frost; estimated loss $30,000,000.

An investigation of the "Shipping Trust," alleged to control 90 per cent of the oversea traffic of the United States, is begun.

Jan. 13. Presidential electors chosen on November 5, 1912, formally cast their ballots for president and vice president; the votes of the eight Republican electors of Utah and Vermont are cast for Nicholas Murray Butler for vice president in place of James S. Sherman, the deceased nominee.

At the conclusion of the impeachment trial, **Judge R. W. Archbald** of the United States Commerce Court is found **guilty** by the Senate and stripped of office, and is "forever disqualified to hold and enjoy any office of honor, trust, or profit under the United States." This is the **third impeachment trial before the United States Senate resulting in conviction.** The other two cases are Judge John Pickering of the Federal District Court of New Hampshire, 1803, and Judge W. H. Humphreys of the Federal District Court of Tennessee, 1862.

Jan. 18. A bill is passed by the Senate authorizing the incorporation of the National Institute of Arts and Letters limited to 250 members, and the American Academy of Arts and Letters limited to 50 members.

Jan. 20. President Taft accepts Kent professorship of law in Yale University.

In January. **Garment workers' strike** in New York City is the most formidable in the history of the industry. Over 150,000 workers are affected. In February the strike spreads to Boston. The strike ends in New York City on March 12, and in Boston on April 21, the employers conceding increased wages, reduced hours, and recognition of the union.

Feb. 2. New Grand Central Terminal building in New York City is officially opened.

Feb. 3. Ratification of the **sixteenth amendment to the United States constitution** by a two-thirds majority of the States is now complete, and is declared February 25. This amendment provides for an income tax, and reads as follows: —

ARTICLE XVI. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States and without regard to any census or enumeration.

Feb. 10. Four United States warships are sent to Mexican waters to safeguard American interests during present outbreak.

Feb. 13. Twenty-nine officials of the National Cash Register Company are convicted at Cincinnati of criminal conspiracy under the Sherman Antitrust Law. The case is appealed.

Feb. 15. The courts finally permit General Castro, the exiled former President of Venezuela, to enter the United States. See Dec. 31, 1912.

Feb. 24. United States Supreme Court sustains the constitutionality of the "White Slave" Act prohibiting the transportation in interstate or foreign commerce of women or girls for immoral purposes.

Feb. 28. Democratic majority of Pujo Committee of House of Representatives, appointed to investigate the alleged **money trust,** reports the existence of "a great and rapidly growing concentration of the control of money and credit in the hands of a few men," and recommends drastic measures, including the regulation of stock exchanges. The Republican minority dissents.

In February. **Silk weavers** at Paterson, New Jersey, **strike** for higher wages, an eight-hour day, and the abolition of the four-loom system. The strike is directed by the Industrial Workers of the World, and is marked by considerable violence. After five months the strike is abandoned (July 23), the loss in wages being estimated at $5,500,000.

March 1. Webb Liquor Shipment bill, forbidding the interstate shipment of liquors intended for unlawful use in prohibition States, is passed over the President's veto.

A law is passed providing for the physical valuation by the Interstate Commerce Commission of the property of common carriers.

March 3. First territorial legislature of Alaska meets at Juneau.

President Taft signs bill creating a new **Department of Labor** to which shall be transferred the Bureau of Immigration and Naturalization, the Children's Bureau, the Bureau of Labor, etc. The Secretary of Labor shall have power to act as mediator and to appoint commissioners of conciliation in labor disputes.

The Sixty-second Congress ends, the third session (Dec. 2, 1912–March 4, 1913) being marked by continued friction between the legislature and the President.

March 4. **Woodrow Wilson is inaugurated as president** and Thomas R. Marshall as vice president.

March 13–24. Tornadoes and electric storms in the South and blizzards in the Middle West cause great destruction to life and property.

March 22. A complete wireless message is flashed from Arlington, Md., to the Eiffel Tower, Paris.

March 25–26. Following the heavy rainfall, the **rivers of Ohio and Indiana reach unprecedented height** and inundate large tracts of country, causing great loss of life and enormous damage to property. Dayton, Columbus, Zanesville, Indianapolis, and other cities suffer severely. Thousands are rendered homeless.

March 31. Walter H. Page is appointed American ambassador to England.

April 7. Sixty-third Congress meets in extraordinary session.

April 8. President Wilson, reverting to Federalist practice, delivers his message orally to both houses of Congress.

1913. *April 18.* In deciding a suit brought by a nonunion worker against a union that procured his discharge and prevented his further employment in other closed shops, the Connecticut Supreme Court of Errors decides that "the **closed shop** is contrary to public policy where the agreement embraces an entire industry of any considerable proportions in the community, so that it will operate generally in that community to prevent or to seriously deter craftsmen from working at their trade under favorable conditions without joining a union."

April 23. Following a coal mine explosion at Finleyville, 27 miles S.E. of Pittsburgh, Pa., more than 100 miners perish.

April 24. W. J. Bryan, Secretary of State, presents to the diplomats at Washington a **plan for world peace,** providing that all controversies shall be submitted to an international commission before war is declared or hostilities begun. See Oct. 11.

May 16. A bill prohibiting the ownership of land by aliens who have not declared their intention of becoming citizens becomes law in Arizona.

May 17. Aviation bill is signed by the governor of Massachusetts requiring registration for flying machines and a license for aviators, and establishing rules of the road.

May 19. **California anti-alien land-ownership bill** is signed in spite of Japanese protest and federal disapproval. See JAPAN, April, 1913.

May 24. Senator S. J. Stilwell of New York State, after being exonerated by vote of Senate, is found guilty of bribery and sentenced on May 28 to from four to eight years imprisonment.

May 26. President Wilson publicly denounces **lobbying** at Washington, and charges particularly that industrious and insidious attempts are thereby made to bring about certain modifications in the tariff bill. On June 2, a special committee of the Senate begins an investigation.

United States Supreme Court, in the **"Sanatogen Case,"** a suit by the patentees to control the price at which the patented article should be sold by their vendees, holds that "a patentee who has parted with a patented machine by passing title to a purchaser has placed the article beyond the limits of the monopoly secured by the patent act."

May 30. National monument to the battleship *Maine* (blown up in Havana Harbor, Feb. 15, 1898) is dedicated in New York City.

May 31. **Seventeenth amendment to the United States constitution** is proclaimed. This amendment provides for the direct election of United States senators, and reads as follows: —

ARTICLE XVII. 1. The Senate of the United States shall be composed of two senators from each State, elected by the people thereof, for six years; and each senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, That the legislature of any State may empower the executive thereof to make temporary appointment until the people fill the vacancies by election as the legislature may direct.

3. This amendment shall not be so construed as to affect the election or term of any senator chosen before it becomes valid as part of the constitution.

Arbitration treaty with Great Britain is renewed for five years.

Theodore Roosevelt wins libel suit against G. A. Newett, editor of the *Iron Ore*, of Ishpeming, Michigan, and on defendant's retraction of drunkenness charges Roosevelt asks for only nominal damages.

In May. Charges that **slavery in the Philippine Islands** exists, and that the Assembly has neglected to pass the necessary laws for its suppression, are made by Commissioner Worcester and subsequently sustained by the auditor of the islands in a report to the secretary of war. See Nov. 22.

June 7. Archdeacon Hudson Stuck, a Protestant Episcopal missionary, with three companions, reaches the summit of the highest peak of Mount McKinley, highest mountain in North America (20,300 feet).

June 9. United States Supreme Court, deciding the Minnesota rate cases, upholds the right of a State to regulate railroad rates within its borders, even where such rates conflict with interstate rates, provided they are not made confiscatory.

June 10. United States Supreme Court affirms the **constitutionality of the newspaper publicity law,** requiring newspapers to publish statements of ownership and circulation, and to mark plainly all advertising matter. See Aug. 24, 1912.

June 14. The American polo team at Meadowbrook, N. Y., wins the second game from the English challengers, and retains the Westchester Cup.

June 18. The diplomatic post at Madrid is raised to an embassy.

June 26. Woman suffrage bill becomes law in Illinois, the act providing that women of legal age may vote for all statutory offices.

June 28. Renewal of general arbitration treaty with Japan is signed.

In June. In the Philippine Islands many **rebellious Moros,** led by the Sultan of Jolo, refuse to surrender their arms, and are attacked by United States troops; after several days fighting they are subdued, 14 Americans being killed and 25 wounded. Further armed encounters with the Moros occur in August and October.

July 1–3. **Fiftieth anniversary of the battle of Gettysburg** is commemorated by a reunion of 50,000 Union and Confederate veterans on the battlefield.

July 12. The Pennsylvania primary act abolishing State conventions is signed by the governor.

July 21. Copper miners at Calumet, Michigan, strike to enforce an eight-hour day and recognition of their union; serious rioting necessitates the calling out of the entire national guard of the State; federal arbitration is proffered but refused. The strike is still unsettled at the close of the year.

July 26. Bills creating a public service commission in Pennsylvania, and reducing the working hours of women from 60 to 54 hours a week, are signed by Governor Tener.

July 28. In the deciding match for the Davis Cup at Wimbledon, England, the American lawn tennis team defeats the British holders.

Aug. 2. Law to enforce the "health marriage" system, with a view mainly to prevent transmission of disease, goes into effect in Pennsylvania. In 1913, similar laws are enacted in Wisconsin and North Dakota.

Aug. 4. Express companies are ordered by the Interstate Commerce Commission to adopt for two years from October 15, 1913, a new schedule of rates providing for an average reduction of 16 per cent.

Aug. 6. John Henry Mears of the New York *Evening Sun* completes a journey round the world in the record time of 35 days, 21 hours, 35½ secs.

Aug. 9. President Wilson signs bill forbidding aviators to fly over the Panama Canal Zone without government sanction.

Aug. 13. **Governor William Sulzer is impeached** by New York legislature for alleged perjury, bribery, and false statement of campaign contributions. Sulzer is first governor of New York to be impeached. See Oct. 17.

Aug. 17. Harry K. Thaw, slayer of Stanford White, escapes in automobile from Matteawan Asylum for the Criminal Insane. He is captured near Coaticook, Canada, and lodged in Sherbrooke jail on August 19. Deported on

September 10, he is arrested in New Hampshire, but extradition is prevented by habeas corpus proceedings in United States Circuit Court.

1913. *Aug. 26.* Japan submits another note in protest against the California anti-alien land-ownership law.

The world's largest power dam, crossing the Mississippi River from Keokuk, Iowa, to Hamilton, Illinois, is dedicated.

Aug. 27. President Wilson proclaims the strictest neutrality between the United States and the contending factions in Mexico, and urges Americans to quit that country.

Sept. 5. Fire at Hot Springs, Arkansas, destroys property of a value estimated at $6,000,000, including schools, churches, and hotels.

Sept. 10. **Centennial of Perry's victory on Lake Erie** is celebrated at Put-in-Bay, Ohio.

Oct. 2. Unprecedented floods in southern Texas cause loss of life and more than $50,000,000 damage to property and crops.

Oct. 3. **Underwood Tariff bill** is signed by President Wilson, and becomes law at midnight, except as regards wool, sugar and molasses, and denatured alcohol. The **income tax** exemption is fixed at $4,000 for married persons and $3,000 for others. Net incomes over this amount will be taxed 1 per cent per annum on such excess, with an additional tax of 1 per cent on incomes over $20,000 and not exceeding $50,000, 2 per cent over $50,000 and not exceeding $75,000, 3 per cent over $75,000 and not exceeding $100,000, 4 per cent over $100,000 and not exceeding $250,000, 5 per cent over $250,000 and not exceeding $500,000, 6 per cent upon the excess over $500,000.

Oct. 4. Colonel Theodore Roosevelt sails from New York for South America, where he will lecture in the larger cities and hunt in the interior.

Oct. 5. Tidal storm causes great suffering at Nome, Alaska; damage to property is estimated at $1,500,000.

Oct. 9. The Uranian liner *Volturno*, with 657 persons on board, from Rotterdam to New York, is burned in mid-ocean, and 136 lives are lost.

Oct. 10. Gamboa dike, separating Gatun Lake from Culebra Cut, and the last barrier to interoceanic navigation through the **Panama Canal**, is blown up by President Wilson's pressing of an electric button at the White House.

Oct. 11. The principles involved in the **international peace plan** are now accepted by 29 countries, as follows: — Italy, Great Britain, France, Brazil, Sweden, Norway, Russia, Peru, Austria, Netherlands, Bolivia, Germany, Argentina, China, Dominican Republic, Guatemala, Haiti, Spain, Portugal, Belgium, Denmark, Chile, Cuba, Costa Rica, Salvador, Switzerland, Paraguay, Panama, Honduras. Three countries, Salvador, Guatemala, and Panama, have already signed treaties accepting the details of the plan. See April 24.

Oct. 17. High Court of Impeachment removes William Sulzer as Governor of New York by 43 to 12, two not voting; he is not disqualified from again holding office; total cost of trial $169,000. Friends of the governor consider his break with Tammany Hall the real cause of the impeachment.

Oct. 18. Mrs. Emmeline Pankhurst, leader of the English militant suffragettes, is ordered deported by a special board of inquiry at Ellis Island, but on October 2, following an appeal to Washington, she is granted permission to enter the United States to fill her lecture engagements.

Oct. 22. The Urgent Deficiency Appropriation bill, containing a clause **abolishing the Commerce Court** but retaining the justices as additional Circuit Court judges, is signed by the President.

Coal mine explosion at Dawson, New Mexico, entombs 280 miners, of whom only 23 are recovered alive.

Nov. 3. United States Supreme Court sustains as constitutional the Massachusetts law **taxing foreign corporations.** The law provides that every foreign corporation shall pay annually an excise tax of one-fiftieth of one per cent on the par value of its authorized stock, such tax not to exceed $2000. The court interprets this to mean a tax on the privilege of doing business within the state, and not a tax on the property of the corporation outside the state.

Nov. 4. Tammany is defeated in New York City elections, the Fusion (anti-Tammany) ticket, headed by John Purroy Mitchel for mayor, being successful by large majorities.

William Sulzer, the deposed governor of New York, is elected to the New York Assembly as a Progressive. See Oct. 17.

Nov. 9–10. **Severe storm sweeps over the Middle West** and the Great Lakes, causing great loss of life, the destruction of several vessels (chiefly on Lake Erie), and the interruption of railroad traffic and telegraphic communication. The total loss is estimated at 256 lives and from $6,000,000 to $10,000,000 in property; damage in Cleveland, Ohio, $2,000,000.

Nov. 10. United States **corn crop** for 1912 is valued by the Department of Agriculture at $1,741,353,019, the most valuable crop in world's history.

Nov. 22. The antislavery bill, passed by the Philippine Assembly, is ratified by the Philippine Commission, and becomes law. See In May.

Dec. 1. The first session of the Sixty-third Congress ends, and the second session begins.

In the **Macy Case** (Straus *vs.* American Publishers' Association et al.) in which the legality of the agreement of the defendants to sell books to those only who will maintain the fixed net retail price is in question, the United States Supreme Court decides that this agreement is not justified by the copyright act and is within the "denunciation of the Sherman Act."

Dec. 1–3. Torrential rains cause devastating inundations in central and southern Texas; 165 lives are lost, and thousands are rendered homeless.

Dec. 10. Nobel Peace Prize of $40,000 is awarded to United States Senator Elihu Root in consideration of his work for world peace as secretary of war and later as secretary of state.

Dec. 19. Hetch Hetchy bill is signed, granting to San Francisco an extensive tract of public land in the northern part of Yosemite National Park for the creation of a new water supply.

Dec. 23. **Owen-Glass Currency bill** is signed by President Wilson. This federal reserve act is a more or less nonpartisan measure providing for the reorganizing of the nation's banking and currency system. Its main features are: — (1) Concentration and mobilization of bank reserves, by instituting at least eight regional banks under the central control of a Federal reserve board. (2) One regional bank to be allowed to rediscount for another. (3) Establishment of an elastic currency in the form of Federal reserve notes issued against "prime commercial paper," such notes to be redeemable at the treasury in gold and at regional banks in gold or lawful money. (4) Gold reserves of 40 per cent must be held in the treasury department against outstanding reserve notes: a heavy tax is provided in certain contingencies to prevent overexpansion. (5) Total capital stock of the regional reserve associations $106,000,000, or 6 per cent of capital and surplus of all national banks; stock open to national banks first and then to the public. (6) Dividends of 6 per cent allowed on regional bank stock. (7) Gradual retirement of national bank notes, and refunding of 2 per cent United States bonds. Substitution of 3 per cent gold bonds, without circulation privileges, to run 20 years, or 3 per cent treasury gold notes for one year, renewable annually for 30 years.

Dec. 26. Storm ravages the New Jersey coast; 14 lives are lost and $1,000,000 damage is done to property.

In 1913. Immigration, 1,197,892. Imports, $1,813,008,234. Exports, $2,465,884,149. The figures for the foreign trade constitute a record.

1913. *In 1913.* The most notable event of the year is the change from a Republican to a **Democratic administration** after an interval of 16 years, an event which marks an epoch in American political history. The year is remarkable for two constitutional amendments and two great triumphs of the Wilson administration — the new tariff law and the currency reform act. The **sixteenth amendment** empowers the levying of an income tax (see Feb. 3). The **seventeenth amendment** provides for the election of United States senators by direct vote of the people (see May 31). The **Underwood Tariff Act** reduces the rate on many imports, and places several articles, especially foodstuffs, on the free list. Embodied in this law is the new **income tax** measure by which every person in the United States and every American citizen residing abroad must pay a tax on the net yearly income over a certain minimum (see Oct. 3). The **Owen-Glass Currency Act,** designed to prevent financial panics, and to put an end to the domination of the so-called Money Trust, provides for the revision of the entire banking and currency system of the United States and the creation of regional reserve banks to act as stabilizing elements in the banking and financial world. The passing of this act in less than ten months is regarded as a great legislative achievement, in view of the intricate and technical nature of the problems involved.

The **prosecution of trusts** for violations of the Sherman Antitrust Law, which has been a marked feature of the Taft administration, is continued under Wilson. There is, however, a tendency of the larger combinations to reorganize voluntarily and split up into separate corporations, so as not to come into conflict with the law.

The movement for providing pensions for widowed mothers receives wide indorsement especially during the present year, **"widows' pensions"** laws being now enacted in thirteen States — Illinois, California, Colorado, Washington, Utah, South Dakota, Idaho, Minnesota, Iowa, Nebraska, Ohio, New Jersey, Pennsylvania (the last ten since January 1, 1913). Many cities are providing such aid by municipal ordinances, while similar legislation is under consideration in other States.

The introduction of the **parcel post** inaugurates a new era in the history of the United States post office. The popularity of the new system exceeds all expectations, and an enormous business is being developed.

Labor disputes are common, and various strikes are recorded; other threatened strikes are averted by arbitration, notably in the cases of railroad employees. The Industrial Workers of the World are associated with the more violent strikes of the year, although syndicalism is not finding many open supporters in the ranks of American trade-unionists.

The year's record of **storms** is one of the most appalling in the annals of the country.

In the promotion of **world's peace** America is taking a more prominent part than any other nation. The plan for the preservation of international peace formulated by Secretary of State Bryan is favorably received by the leading powers, and three treaties based upon these proposals have been concluded. See Oct. 11.

In the **Philippines** the foreign trade is increasing and general progress is recorded. The question of granting independence is not favorably regarded in Washington, it being held that independence would retard the progress of the islands by producing internal dissension, and might involve the United States in international complications. Improved water supply and sanitary conditions produce a marked reduction in the death rate. In **Porto Rico** a financial crisis is narrowly averted owing to the refusal of the banks to extend loans or to make advances on the growing sugar crop, in view of the modified tariff and the feared overproduction of sugar. The sugar industry has increased from 55,000 tons per year prior to the United States occupation to 383,000 tons in 1913, and now represents over 60 per cent of the total industries of the island. Educational and sanitary improvement continues; trade with the United States remains steady. The last obstruction in the **Panama Canal** has been removed and interoceanic communication is an accomplished fact.

1914. *Jan. 1.* The weight limit of the parcel post is increased from 20 to 50 pounds on packages to be carried less than 150 miles.

Jan. 2. The firm of **J. P. Morgan & Co.** severs its directorial connection with twenty-seven corporations, on account of changed public attitude toward "interlocking directorates."

Jan. 3. Direct wireless communication is established between the United States and Germany. The Kaiser and the President exchange messages.

Jan. 5. Ford Motor Company of Detroit, Michigan, announces a profit-sharing plan, $10,000,000 (part of the estimated earnings of the year 1914) to be distributed semi-monthly among the employees.

Jan. 12. Last rock barrier is blasted away in the Catskill-New York aqueduct.

Jan. 22. New York Secretary of State estimates the number of **motor vehicles** in use throughout the world, as follows: — United States, 1,127,940; Great Britain, 425,838; ascertained total from various European countries, 273,511; estimated total from other countries, 92,500; total, 1,919,789 cars.

Jan. 27. Executive order establishing a permanent government in the **Canal Zone** is promulgated by President Wilson; Colonel Goethals is nominated civil governor.

Jan. 28. Michigan "Blue Sky" law regulating investment companies is declared unconstitutional by Federal District Court. United States Circuit Court sustains the decision July 5.

Jan. 30. Old Dominion liner *Monroe* is rammed during dense fog by the steamer *Nantucket* of the Merchants and Miners Transportation Company at about 2 A.M., off Hogg Island, about 30 miles northeast of Cape Charles, Va., and sinks within twelve minutes after the collision; 41 lives are lost; 98 of passengers and crew are saved by the *Nantucket*.

Feb. 3. President Wilson **lifts the embargo** placed on the exportation of arms and munitions of war from the United States into Mexico.

Feb. 10. Sharp earthquake shock is felt throughout the northeastern section of the United States and Canada, the disturbance being particularly noticeable in New York and the Connecticut Valley.

Feb. 17. General treaty of arbitration with the Dominican Republic is signed at Washington.

Feb. 21. Senate ratifies the general arbitration treaties with Great Britain, Italy, Spain, Portugal, Switzerland, Norway, Sweden, and Japan.

Feb. 23. United States Supreme Court holds that the Pure Food and Drug Act does not prohibit the use of injurious substances, unless in such quantities as may affect the health of the consumer.

March 12. President Wilson signs the bill authorizing the construction of a railroad in Alaska by the government, at a cost of $40,000,000.

March 13. United States Express Company decides to retire from business after sixty years of existence, mainly because of parcel-post competition.

1914. *March 30.* President Wilson authorizes a statement denying that his support of the repeal of the Panama Canal Act discriminatory clause is the result of an agreement with England.

April 1. House of Representatives passes a bill giving pensions to widows and children of veterans of the Spanish war, the Philippine insurrection, and the Boxer uprising.

April 7. United States sailors are arrested at Tampico. See MEXICO.

Women of Illinois take part in local elections for the first time, but in Chicago their eight aldermanic candidates are defeated.

April 17. **Treaty with Colombia** is signed, by which Colombia is to receive $25,000,000 as indemnity and enjoys free use of the Canal in perpetuity.

April 20. **Industrial war** in the mining district of south-central **Colorado,** which began on September 23, 1913, culminates in a pitched battle between armed strikers and State militia, 25 persons (including two women and 11 children) being killed or burned to death in a fire which follows. Many large mine properties are subsequently destroyed by dynamite and fire. On April 28, further conflict in the southern Colorado coal fields results in the death of seven miners, one striker, and one militia officer, making a total of 47 lives during ten days of fighting. President Wilson orders Federal troops to the strike district to replace the State militia and to disarm the strikers and mine guards. Normal conditions are restored, but the controversy remains unsettled till November 25, when the operators accept President Wilson's plan of settlement. On December 8, the strike is formally called off by the United Mine Workers after costing 66 lives and millions of dollars.

April 21. Water is let into the **Cape Cod canal,** which will shorten the Boston-New York water route by 70 miles.

April 22. **Diplomatic relations with Mexico are broken off.**

April 23. President Wilson restores the embargo on shipments of arms and munitions of war from the United States into Mexico.

April 25. United States accepts the mediation proposal of Argentina, Brazil, and Chile toward the settlement of the Mexican dispute. A virtual armistice goes into effect. See May 20.

April 28. Col. Roosevelt emerges from Brazilian wilderness at Manáos, having traversed more than 600 miles of unexplored territory and traced the course of a hitherto unknown river.

April 30. United States army under Brigadier General Funston assumes control at Vera Cruz, and the naval forces are withdrawn to their ships.

May 5. General arbitration treaty with Italy is signed at Washington.

May 9. President Wilson issues proclamation asking that the second Sunday in May, 1914, be observed as a national **Mother's Day,** in accordance with the joint resolution of the House of Representatives.

May 11. Memorial services over the bodies of 17 marines and bluejackets killed at Vera Cruz are held in the navy yard at New York.

May 18. Panama Canal is opened for regular barge traffic.

May 20. **Peace conference opens at Niagara Falls,** Canada, attended by delegates from the United States and from the Huerta government in Mexico, together with the **"A. B. C."** representatives (Argentina, Brazil, Chile) to adjust the differences between the United States and Mexico and to devise a plan for the pacification of Mexico. On June 24, a protocol is signed providing for the settlement of financial claims and for the recognition of a new government, constituted by agreement between the Mexican factions. The sessions are suspended, and the conference ends formally without positive result June 30.

June 2. Diplomatic post in Argentina is raised to an embassy.

June 8. In regard to **Federal power over intrastate rates** to the extent necessary to prevent injurious discrimination against interstate commerce, United States Supreme Court decides that " no local rule can nullify the lawful exercise of Federal authority, and after the Interstate Commerce Commission has made an order within its jurisdiction there is no compulsion on the carrier to comply with any inconsistent local requirement."

June 12. Strike of coal miners in West Virginia (begun in September) is formally ended.

June 14. Lassen Peak in California becomes violently eruptive; July 1, new eruptions send ashes 13 miles; August 19, two eruptions occur.

June 15. President Wilson signs bill repealing the tolls-exemption clause of Panama Canal Act, to which Great Britain had objected. See May 21, 1912.

June 16. England wins the international polo championship by defeating the American team in the second and deciding game at Meadowbrook, N. Y.

June 22. United States Supreme Court, in deciding the International long-and-short-haul rate case, holds that pipe lines are common carriers and must carry products of competitors at rates subject to regulation by the Interstate Commerce Commission.

June 25. Fire destroys a large part of the city of Salem, Mass., including several thousand homes and large industrial plants.

July 1. Order prohibiting alcoholic liquors in the navy goes into effect.

July 3. Secretary of Treasury announces yield from income tax to be $28,306,336, of which $12,523,000 is from New York.

July 23. Civil and criminal proceedings against the New York, New Haven & Hartford Railroad Company, are begun by the government with a view to dissolving an alleged unlawful monoply of transportation facilities in New England. An agreement is reached on August 11, and the suit is dropped.

July 31. **Stock exchanges close** because of war conditions abroad.

Aug. 4. President Wilson issues neutrality proclamation. See GERMANY.

Aug. 5. President Wilson offers his good offices to heads of State of warring nations in an effort to promote peace.

Treaty with Nicaragua is signed by which for a payment of $3,000,000 the United States secures the perpetual right to construct an interoceanic canal and a naval base.

Congress appropriates $2,500,000 for relief of Americans in Europe.

Cable between Germany and United States is cut, stopping all direct communication except by wireless.

Aug. 6. U. S. cruiser *Tennessee* leaves New York with $5,500,000 in gold for the use of stranded Americans in Europe.

Mrs. Woodrow Wilson, wife of the President, dies at the White House.

Aug. 11. Senate passes **Emergency Ship bill,** admitting foreign-built ships to American registry.

Aug. 12. International Harvester Company is declared by United States District Court at St. Paul to be a monopoly in restraint of trade; its dissolution is ordered.

Aug. 13. Senate ratifies **arbitration treaties** with Argentina, Bolivia, Brazil, Chile, Costa Rica, Denmark, Dominican Republic, Guatemala, Honduras, Italy, Netherlands, Nicaragua, Norway, Panama, Persia, Portugal, Salvador, Switzerland, Uruguay, and Venezuela; and on September 25 with Great Britain, France, and Spain. These treaties provide that commissions of inquiry shall pass upon international disputes that may arise and that fail of diplomatic adjustment.

Aug. 15. **Panama Canal is formally opened** to commerce by the passage of the Panama Railroad steamship *Ancón* from Atlantic to Pacific in ten hours. First warship to pass through is the Peruvian destroyer *Teniente Rodriguez,* August 18. The Panama Canal shortens the distance between New York and the following places as follows: San Francisco, 8,100 miles by water (former route, 13,400 miles; via Panama Canal, 5,300 miles); Yokohama, 3,729 miles; Sydney, 3,806 miles; Wellington, New Zealand, 5,542 miles; Hawaii, 5,800 miles; Manila, 5,800 miles; Callao, 5,990 miles.

1914. *Sept. 14.* United States Red Cross steamship *Red Cross* sails from New York for Europe.

Sept. 26. **Federal Trade Commission bill** is approved. The act provides for a commission of five members to which the powers of the Bureau of Corporations are transferred. The commission is empowered to prevent unfair methods of competition in commerce, to investigate the affairs of corporations other than banks and common carriers, to investigate trade conditions in and with foreign countries, and to enforce its orders through the courts.

Sept. 28. First State primary in New York results in victories for candidates preferred by the organizations.

President agrees to the postponement of the Ship Purchase bill provided it receives first attention at the next session.

Oct. 1. Treaty with Russia is signed at Washington to submit all disputes that cannot be settled diplomatically to an international commission.

Oct. 14. **Clayton Antitrust bill,** to supplement existing laws against unlawful restraints of trade and monopolies, is signed by the President.

Oct. 15. Panama Canal is temporarily closed because of earth slide in Culebra Cut. It is closed for a second time on October 31.

Oct. 17. United States District Court signs decree dissolving the New York, New Haven & Hartford Railroad system; the road gives up the Boston & Maine, the Boston & Albany, its trolley lines and steamship lines.

Oct. 22. President Wilson signs the **War Tax bill,** designed to meet the deficits caused by the decrease in dutiable imports from countries affected by the Great War.

Oct. 24. First regular session of **Sixty-third Congress** ends. As this immediately followed the special session which began April 7, 1913, the National Legislature has been at constant work for 567 days, the second longest term in the history of Congress. Its work has included the reception of 6,641 bills, the ratification of 26 arbitration treaties, and about 5,000 Presidential nominations by the Senate; 19,307 bills by the House; and the passage of appropriation bills aggregating $1,115,903,777. The record term is that of the Fortieth Congress from March 4, 1867, to November 10, 1868, a period of 619 days.

Nov. 2. Federal quarantine is proclaimed to prevent the spread of foot-and-mouth disease among cattle in many States.

Nov. 3. Woman Suffrage Constitutional amendments are adopted in Nevada and Montana, and rejected in Missouri, Nebraska, Ohio, North Dakota, and South Dakota.

Constitutional amendments prohibiting traffic in liquor are rejected in California and Ohio, but adopted in Washington, Oregon, Arizona, and Colorado.

Elections to Sixty-fourth Congress: In House, Democrats, 230; Republicans, 195; Progressives, 7; Socialists, 1; Prohibition, 1; Independent, 1; Democratic majority is reduced from 147 to 25; in the Senate, Democratic majority is increased from 10 to 16.

Republican governors are elected to succeed Democrats in Colorado, Connecticut, Kansas, New Hampshire, New York, Ohio, and Oregon; Democrats succeed Republicans in Idaho, Minnesota, Nevada, and Tennessee; former governors are reëlected in Arizona, California, Iowa, Massachusetts, Michigan, Nebraska, North Dakota, and South Dakota.

Nov. 6. Chicago stockyards are closed, for the first time, to permit thorough disinfection on account of the spread of foot-and-mouth disease.

Nov. 14. U. S. collier *Jason* (" Christmas Ship ") leaves New York for Europe with $3,000,000 worth of Christmas presents for the children of the belligerents.

Nov. 16. **Federal Reserve Bank system** goes into effect throughout the United States. The country is divided into twelve districts, with their respective Federal Reserve cities as follows: No. 1, Boston, Mass.; No. 2, New York; No. 3, Philadelphia; No. 4, Cleveland, Ohio; No. 5, Richmond, Va.; No. 6, Atlanta, Ga.; No. 7, Chicago; No. 8, St. Louis, Mo.; No. 9, Minneapolis; No. 10, Kansas City, Mo.; No. 11, Dallas, Texas; No. 12, San Francisco, Cal. See Dec. 23, 1913.

A launch from the U. S. cruiser *Tennessee* is fired on from the Turkish forts while entering the port of Smyrna. Turkey explains, on November 21, that the mining and closing of the harbor caused a warning shot to be fired. Washington accepts the explanation.

Cotton Exchanges at New York and New Orleans resume trading after fifteen weeks' suspension.

Nov. 21. Yale " *Bowl,*" an athletic field seating 68,000 persons, is formally opened with the annual Yale-Harvard football match; Harvard wins, 36 to 0.

Nov. 30. Parcel-post service is resumed with Germany and Austria-Hungary, but is still prohibited with Turkey and the war zone of Belgium and Northern France.

In November. Rockefeller Foundation donates $1,000,000 for **Belgian relief,** and undertakes to defray the cost of handling and transporting all relief supplies received by the Belgian Relief Committee and other coöperating agencies. On November 3, the first relief ship *Massapequa* sails for Rotterdam with a $275,000 cargo of flour, etc., followed shortly by the *Agamemnon* and the *Neches.* Nov. 12, the *Thelma* sails from Philadelphia with a cargo of food contributed by local citizens for the Belgians. Shiploads of food and clothing are sent by other States and cities. By January, 1915, no less than 35 ships are engaged in carrying supplies from America to the Belgians.

Dec. 1. Rear Admiral Albert Mahan, celebrated naval historian, dies at the age of 74 years.

Dec. 8. Panama national assembly ratifies treaty granting the United States control of the harbors of Colón and Ancón.

Dec. 12. New York Stock Exchange reopens for trading in stocks, with fixed minimum prices, after having been closed since July 31. The only other time this Exchange has been closed was from September 20th to 30th, 1873.

Dec. 18. **Increase in Eastern freight rates** is granted by Interstate Commerce Commission. The decision benefits all railroads operating between the Atlantic seaboard and the Mississippi, north of the Potomac and Ohio Rivers, a flat advance of **five per cent** being allowed, except in the case of lake-and-rail traffic, coal, coke, iron ore, and certain other traffic, upon which the Commission has heretofore fixed rates adjudicated " reasonable." Additional revenue approximating $30,000,000 is expected to result from this decision.

Dec. 26. United States government sends note to Great Britain protesting against unwarrantable interference with American commerce due to **seizures and detention of American cargoes** destined to neutral European ports. See Jan. 10, 1915.

In 1914. Immigration, 1,218,480. Imports, $1,893,925,657. Exports, $2,364,579,148.

In 1914. The year 1914 is one of the most momentous in the history of the world. America looks on at the mighty conflict raging in Europe, preserving a strict neutrality, yet neither unmoved nor unaffected. American sympathy goes out to the sufferers, particularly to the destitute Belgians. Money, food, clothing, medical supplies, and various comforts are given unstintingly by the people of the United States in the cause of humanity. The war brings home to us the interdependence of international trade and division

of labor. The **immediate effects of the war on the United States** are seen in the closing of the New York Stock Exchange, the vast shipments of gold to Europe and consequent scarcity at home, the shutting down of the New England cotton mills, the cessation or curtailment of exports and imports, the hampering of various industries through lack of raw material, as, for instance, rubber. A readjustment of the economic structure of the United States is essential, and so well does the country meet the new situation that the industrial and financial confusion which marks the outbreak of the war gives place to more promising conditions toward the end of December. The direct benefits to United States trade are seen in the increased foreign demand for steel, copper, oil, foodstuffs, leather, woolen goods, automobiles, munitions of war, and the like. The **commercial opportunities** resulting from the war are manifold. The stoppage of German seaborne trade presents new possibilities to American exporters, especially with South America, the Far East, and the Antipodes. The **completion of the Panama Canal,** a historic event whose importance is largely overshadowed by the war in Europe, opens the gateway to the Pacific, and for the first time gives the American manufacturer an advantage over his European competitor.

1914. The year's **legislation** presents many important features, notably the Federal Reserve Act, the supplementary Antitrust Law, the Federal Trade Commission Act, the Alaska Railroad Act, and the repeal of the tolls provision of the Panama Canal Act.

The November **elections** reduce the Democratic majority in the House and increase it in the Senate; the result on the whole is encouraging to the Republicans. The Progressive Party has few victories to its credit.

Various **strikes** disturb the industrial peace, notably the prolonged struggle in Colorado between union miners and a number of operators dominated by the Rockefeller interests. See April 20.

In the **Philippines,** steady commercial and educational progress is shown. The Jones bill establishing a new form of government, and leading to a withdrawal of United States sovereignty, passes the House of Representatives, but no further action is taken in the current year.

In regard to **Porto Rico,** a bill is introduced into the Senate providing for a territorial government and conferring American citizenship upon the inhabitants.

1914. The armed intervention of the United States in **Mexico,** the mediation of the "A. B. C." states of South America, and the presentation of an American note to **Great Britain** on the rights of neutrals in international commerce, are the outstanding features of the year's foreign relations.

1915. *Jan. 1.* **Panama-California Exposition** opens at San Diego.

Jan. 5. In the **Danbury Hatters case,** the United States Supreme Court affirms the $252,000 judgment awarded by New York Federal Court to D. E. Loewe & Company against members of the United Hatters' Union under the Sherman Antitrust Law as damages resulting from a boycott.

Jan. 6. Subway accident, due to short-circuiting, causes panic near Fifty-third Street and Broadway, New York, during the morning rush hour; many passengers are injured, one fatally; virtually the entire fire and ambulance service of Manhattan is called out.

Jan. 8. **President Wilson's address at Indianapolis,** in defense of his administration, commands wide attention. Certain words used by him in defending his Mexican policy of "watchful waiting" are interpreted as a hint of a second-term candidature for the presidency, which however he disclaims.

Jan. 10. **Great Britain's preliminary reply to the United States note** (see Dec. 26, 1914), requesting an improvement in the treatment of American commerce, concedes the principles of the American government's contentions, refers to alleged fraudulent practices by shippers, and promises not to interfere in bona fide trade between neutral countries but only "with trade in contraband destined for the enemy's country," Great Britain offering to make redress whenever its action "may unintentionally exceed" the limits of international law.

Jan. 23. Following a ruling of the United States Supreme Court on December 21, 1914, Harry K. Thaw is surrendered by New Hampshire to the custody of New York State. See Aug. 17, 1913.

Jan. 25. President Wilson inaugurates the first **transcontinental telephone** system, opened in connection with the Panama-Pacific Exposition in San Francisco.

Feb. 20. **Panama-Pacific International Exposition** opens at San Francisco, participated in by 42 foreign nations. It is the official national and international celebration of the opening of the Panama Canal.

HISTORICAL AND POPULATION STATISTICS OF THE UNITED STATES.

States.	Place of Settlement and Date.	By whom Settled.	Capitals.	Date of Admission.	Population in 1910.	Rank in 1910.	Representatives in Congress.	Increase in Population, 1900–1910.	Miles of Railroad, June 30, 1909.

NOTE. — Alaska was purchased from Russia in 1867. *a* The Census of 1910 enumerates also 55,608 (in part estimated) persons in the service of the United States, stationed abroad. Including these, and also Alaska, the Hawaiian Islands, Porto Rico, the Philippines, Guam (pop. 11,760), Tutuila and the adjacent islands (6,668), the total population of the United States and her possessions in 1910 was 101,056,005. In addition to the previously enumerated possessions, the United States possesses numerous small islands in the Pacific Ocean, including Wake, Christmas, Gallego, Starbuck, Phœnix, Penrhyn, Howland, Baker, Palmyra, Midway, Gardiner, Johnston, Morell, and Marcus Islands. The populations of the States are those of the preliminary census reports, and their total differs slightly from the official total here given. * Decrease. ** Territorial delegates have no vote in Congress.

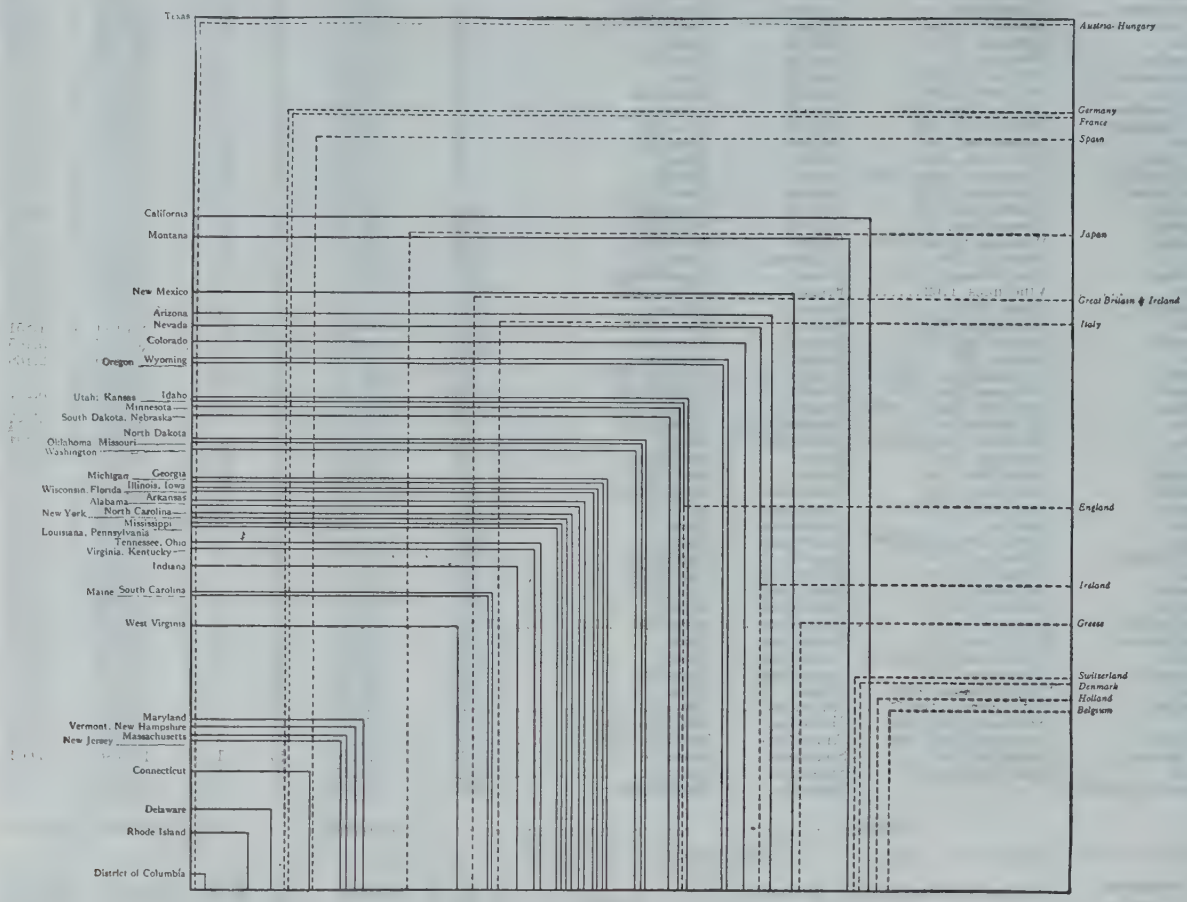
COMPARATIVE SIZE OF THE UNITED STATES AND FOREIGN COUNTRIES.

(Scale, 100 miles to 1 inch.)



The squares of which the left-hand lower corners coincide, and which are inclosed by solid lines, indicate the areas of the several States. Those arranged on the right of the diagram and bounded by broken lines, indicate the areas of foreign countries, and are inserted for the sake of comparison. Where two States are of nearly equal area they are of necessity represented by a single square, *e. g.*, South Dakota and Nebraska; also Vermont and New Hampshire; etc. The areas of the several States, as given in the following table, are land areas from the computations of the Geographer of the Census of 1910.

	States.	Foreign Countries.	Sq. Miles.
1.	Texas		262,398
		Austria-Hungary	261,027
		Germany	208,825
		France	207,129
		Spain	195,056
2.	California		155,652
		Japan	147,657
3.	Montana		146,201
4.	New Mexico		122,503
		Great Britain and Ireland	121,105
5.	Arizona		113,810
		Italy	110,688
6.	Nevada		109,821
7.	Colorado		103,658
8.	Wyoming		97,594
9.	Oregon		95,607
10.	Idaho		83,354
11.	Utah		82,184
12.	Kansas		81,774
13.	Minnesota		80,858
14.	South Dakota		76,868
15.	Nebraska		76,808
16.	North Dakota		70,183
17.	Oklahoma		69,414
18.	Missouri		68,727
19.	Washington		66,836

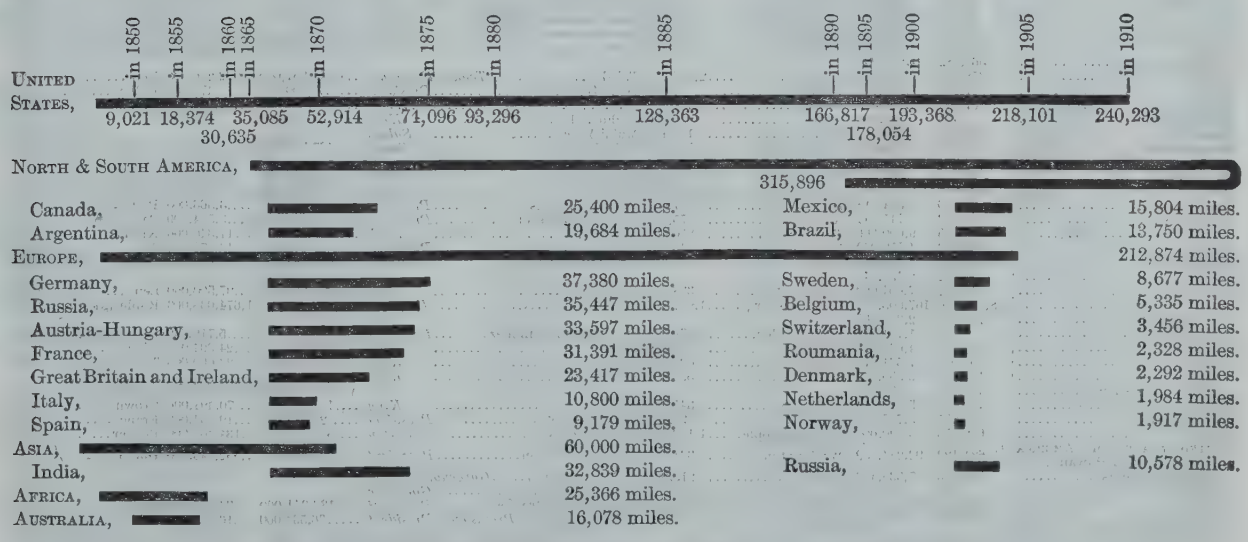
* Date of separation from an older city or town. † Decrease.

COMPARATIVE LENGTH OF RAILROADS:

SHOWING THE LENGTH COMPLETED IN THE UNITED STATES AT INTERVALS OF FIVE YEARS.

(Scale, 40,000 miles to 1 inch.)



The United States had 23 miles of railroad in 1830; 1,098 in 1835; 2,818 in 1840; 4,633 in 1845.

There were in the world, in 1911, 633,000 miles of railroad, which, in the scale employed above, would be represented by a line 15.83 inches in length.

RECENT STATISTICS OF VARIOUS NATIONS.

NOTE. — Where recent census returns are not available trustworthy estimates have been used.

The statistics of population, national debt, etc., represent conditions preceding the outbreak of the Great War.

INDEX

TO THE

REFERENCE HISTORY OF THE WORLD.

THE aim has been to cover all references to persons, places, events, and periods, each under its specific name. Events are given under the place name. Thus, **Congress of Berlin** is under **BERLIN, Battle of Actium** under **ACTIUM**, etc.

Besides this full specific indexing, much of the information is again indexed under topics. Thus under each country is indexed its history up to 1648, enabling one to follow readily the history of individual states in the general history, pp. 5–19. After 1648, the history of each country is treated by itself in the text, so no details need be indexed under the country's name, except where information about one country is given in the history of another country. Compare also the treatment under Roman Catholic Church, Slavery, etc.

Many events, as wars, treaties, alliances, and the like, have references to several places in the history, thus presenting a many-sided view and indicating their manifold relations and results. Cross references, too, have been freely used to link one country to another or suggest phases of a question that may not at first be evident.

EXPLANATIONS: Reference numbers, as 15 **2**, give page and column; numerals in parentheses show dates. Where several references to a name or event occur in the same column semicolons separate the distinct items, and the page and column figures are given after the last reference only.

The following special abbreviations have been used

cap. capital, captures, -d.
conq. conquers, -ed.
disc. discovers, -ed.
dyn. dynasty.
estab. establishes, -d.
exhib. exhibition.
exped. expedition.
fnd. founds, -ed.
subj. subject, -s, -ed.
surr. surrenders, -ed.

A.

Aalesund, fire, 79 **2**.
Aarau, cap. Helvetic repub., 93 **2**.
Aarhuus, Jutland, exhib., 86 **1**.
Abbas Pasha, of Egypt, 60 **1**.
—— —, Khedive, 60 **1**.

STATE SCHOOL SUPERINTENDENTS INDORSE THE NEW INTERNATIONAL

United States. MAY 3, 1910.—It is a notable addition to the great Webster series.—ELMER ELLSWORTH BROWN.

Alabama. JAN. 29, 1914.—Indispensable.—WM. F. FEAGIN.

Arizona. OCT. 17, 1912.—One of the best.—C. O. CASE.

Arkansas. MAR. 17, 1911.—Superior in every way. GEO. B. COOK.

California. MAY 6, 1910.—Fully modern and comprehensive. A most desirable reference book for daily use.—EDWARD HYATT.

Colorado. JAN. 28, 1914.—Supreme achievement of the lexicographer's art.—MRS. MARY C. C. BRADFORD.

Delaware. OCT. 9, 1913.—Full and complete answers every time.—CHARLES A. WAGNER.

Florida. APR. 1, 1913.—I do not see how any man in a literary or official position can do without it.—W. N. SHEATS.

Georgia. SEPT. 24, 1910. A most excellent work. M. L. BRITTAIN.

Idaho. Sept. 10, 1913.—Find it invaluable.—E. O. SISSON, Com. of Education.

Indiana. AUG. 12, 1911.—It has been approved by the State Board of Education.—CHAS. A. GREATHOUSE.

Iowa. DEC. 14, 1911.—Is my authority.—A. M. DEYOE.

Kansas. MAY 11, 1910.—A complete, a most satisfactory and an authoritative dictionary, the best in the market.—E. T. FAIRCHILD. [BARKSDALE HAMLETT.

Kentucky. JAN. 30, 1912.—Commend it without reserve.—

Louisiana. JAN. 16, 1911.—Highly satisfactory.—T. H. HARRIS.

Maine. OCT. 26, 1909.—The standard work of reference for public school use.—PAYSON SMITH.

Maryland. MAY 24, 1910.—Possesses many features that make it especially convenient for general use.—M. BATES STEPHENS.

Massachusetts. MAR. 8, 1910.—I have been struck with the thoroughness with which the work has been done. DAVID SNEDDEN.

Michigan. DEC. 21, 1909.—The New International is much superior to the old International.—LUTHER L. WRIGHT.

Mississippi. JULY 25, 1914. A very valuable book.—W. H. SMITH.

Missouri. JAN. 25, 1915. Complete in every respect. H. A. GASS.

Montana. SEPT. 29, 1913.—Adopted in the public schools of the State. Should be in every schoolhouse.—H. A. DAVEE.

Nebraska. NOV. 14, 1911. Am a constant user. J. E. DELZELL.

Nevada. FEB. 7, 1911.—Up to date, practical.—JOHN E. BRAY.

New Hampshire. MAY 1, 1912.—By all odds the most convenient and useful reference book I own.—H. C. MORRISON.

New Jersey. JAN. 31, 1910.—It bears the supreme test of daily use. It is up to date and complete.—C. J. BAXTER.

New Mexico. JUNE 8, 1912. Nearly perfect. ALVAN N. WHITE.

New York. MAY 2, 1910.—No school, library, office, or home is well equipped without it.—A. S. DRAPER.

North Carolina. OCT. 14, 1913.—The most valuable one-volume reference book in the language.—J. Y. JOYNER.

North Dakota. NOV. 7, 1911.—Meets every requirement.—E. J. TAYLOR.

Ohio. DEC. 1, 1913.—Use Webster.—F. W. MILLER.

Oklahoma. SEPT. 18, 1912.—Adopted for exclusive use in the Public Schools.—R. H. WILSON.

Oregon. FEB. 27, 1911.—I am much impressed by the amount of new matter that you have in this dictionary.—L. R. ALDERMAN.

Rhode Island. MAY 17, 1910.—It easily maintains the superiority established by its predecessors.—WALTER E. RANGER.

South Carolina. APR. 30, 1910.—I have used the New International with entire satisfaction.—J. E. SWEARINGEN.

South Dakota. OCT. 10, 1914.—Webster's New International Dictionary is exceptionally convenient for use.—C. H. LUGG.

Tennessee. JAN. 28, 1914.—I am much impressed with its arrangement and thoroughness.—S. H. THOMPSON.

Texas. Nov. 11, 1913.—Our authority.—W. F. DOUGHTY.

Utah. FEB. 4, 1914.—Is all supporters claim.—A. C. MATHESON.

Vermont. MAY 7, 1910.—The New International is unsurpassed as a usable dictionary.—MASON S. STONE.

Virginia. MAY 2, 1910.—I find the New International absolutely indispensable.—J. D. EGGLESTON, JR.

Washington. APR. 3, 1913.—We use it daily in our work.—MRS. JOSEPHINE PRESTON.

West Virginia. MAY 18, 1914.—Meets the needs of the present hour. Represents the best in Dictionary making.—M. P. SHAWKEY.

Wyoming. JAN. 20, 1915.—It is an excellent book and will be of great use in this office.—EDITH K. O. CLARK.

Philippine Islands. JULY 29, 1914.—I consider it the last word in dictionary matters.—H. S. MARTIN.

Porto Rico. NOV. 25, 1912.—The supremacy of the New International is assured for years to come.—E. M. BAINTER.

STATE SUPREME COURTS INDORSE THE NEW INTERNATIONAL

Washington, D. C. UNITED STATES COURT OF CLAIMS. FEB. 14, 1911.—Is really a necessary adjunct to our daily labors.

Alabama. NOV. 14, 1910.—We commend it unqualifiedly.

Arizona. NOV. 15, 1910.—Its definitions are succinct, clear, and to this, as to other courts, satisfactory.

Arkansas. OCT. 20, 1910.—It is about perfect.

California. MAR. 24, 1911.—The new method of grouping at the bottom of each page the unimportant and rare words we find very convenient in use.

Colorado. FEB. 18, 1911.—Practically indispensable to every one who wishes to use with accuracy and discrimination the English language.

Connecticut. DEC. 16, 1910.—We find it the same invaluable book that the Webster's dictionaries have always been.

Delaware. NOV. 18, 1910.—Indispensable to the members of the bench and bar.

Florida. JAN. 9, 1911.—We regard it, by long odds, the best dictionary extant.

Georgia. MAR. 10, 1911.—Is especially valuable to the members of the bar and bench.

Idaho. MAR. 4, 1911.—The definitions of all words and phrases, are remarkable for their accuracy, completeness and conciseness.

Illinois. OCT. 24, 1910.—A standard of excellence, both as to the orthography and definitions of all words in our language.

Indiana. DEC. 14, 1910.—It is all that can be desired.

Iowa. NOV. 23, 1910.—No man is so learned or so unlearned that he may not derive profit from its use.

Kansas. NOV. 17, 1910.—It is indispensable to anyone who wishes to speak or write the English language correctly.

Kentucky. FEB. 16, 1911.—It is the court's usual reference book on definition, and we find it of great value to us in our work.

Louisiana. JAN. 7, 1911.—A standard authority of the highest value; a treasury of words, definitions and analysis.

Maine. DEC. 8, 1910.—The best for the man of affairs as well as the professional man to have upon his desk for practical daily use.

Maryland. DEC. 7, 1910.—So complete, accurate, and thorough it will meet every demand of those in need of an up-to-date dictionary.

Massachusetts. OCT. 13, 1910.—The fullness and accuracy of its definitions will almost certainly give it precedence over all others.—Chief Justice Marcus P. Knowlton.

Michigan. NOV. 18, 1910.—Valuable reference library.

Minnesota. NOV. 21, 1910.—The acme of excellency and utility.

Mississippi. DEC. 13, 1910.—We use it as the standard.

Missouri. DEC. 1, 1910.—For comprehensiveness, exactness, lucidity, and scholarship it is superior to its predecessors.

Montana. NOV. 19, 1910.—As an aid to literary and professional men it is indispensable.

Nebraska. DEC. 31, 1910.—It is practical in its arrangement, and the definitions are clear and accurate.

Nevada. DEC. 6, 1910.—Much pleasure in commending it to all who desire to think clearly and speak well.

New Jersey. JAN. 20, 1911.—For the exact meaning and precise definition it has proved eminently satisfactory to us.

New Mexico. JAN. 26, 1911.—Its completeness and accuracy make it of the greatest service to bench and bar.

New York. MAR. 15, 1911.—An unsurpassed authority in all work of a literary character.

North Carolina. NOV. 21, 1910.—No other work has been so much relied upon for correct definitions.

North Dakota. DEC. 7, 1910.—This volume will be invaluable alike in every private, public, and law library.

Ohio. NOV. 29, 1910.—A safe guide with respect to its copious and accurate definition of legal words and phrases.

Oklahoma. NOV. 21, 1910.—It is a work of constant reference in the preparation of opinions in this court.

Oregon. APR. 26, 1911.—Indispensable to lawyer and judge and to any person who takes a pride in the use of correct English.

Pennsylvania. APR. 25, 1911.—It is a compendium that embraces everything desired in a dictionary. Has no superior.

Rhode Island. DEC. 22, 1910.—Its modern improvements, leave little to be desired.

South Carolina. NOV. 29, 1910.—Meets every requirement.

South Dakota. APR. 7, 1913. Remarkably complete, accurate and concise. This work is of distinct value to the legal profession.

Tennessee. MAR. 16, 1911.—Of especial value is its copious and accurate definition of legal words and phrases.

Texas. JAN. 1, 1911.—Decided advance in making of dictionaries.

Utah. NOV. 22, 1910.—Stands unsurpassed.

Vermont. APR. 5, 1910.—It is in its close and accurate definitions that it will prove most useful to bench and bar.

Virginia. JAN. 10, 1911.—Intelligent and conscientious effort has added greatly to its usefulness.

Washington. NOV. 26, 1910.—No other single volume ever published contains as much useful information.

West Virginia. MAR. 14, 1911.—It is superb in clearness and completeness.

Wisconsin. NOV. 15, 1910.—Covers the latest advances in human knowledge.—Chief Justice Jno. B. Winslow.

Wyoming. DEC. 21, 1910.—A most convenient and complete dictionary for use in the office, countingroom, school or home.

EMINENT AUTHORITIES WARMLY COMMEND
WEBSTER'S NEW INTERNATIONAL DICTIONARY

HARVARD UNIVERSITY,
H. Langford Warren, A.M., Professor of Architecture.

The best for ready reference with which I am familiar. As a glossary of architectural terms I find it very complete and accurate.

Ralph Barton Perry, Ph.D., Assistant Professor of Philosophy.

Its treatment of philosophical terms is, so far as I know, quite unparalleled in general dictionaries.

BROWN UNIVERSITY,
W. H. P. Faunce, D.D., President.

Webster's New International Dictionary is a small encyclopedia, covering the entire territory of the world's knowledge and the world's action.

COLUMBIA UNIVERSITY,
Nicholas Murray Butler, LL.D., Ph.D., President.

Both in contents and in arrangement, it marks new advances even upon its excellent predecessor. This familiar volume will remain my constant desk companion.

CORNELL UNIVERSITY,
J. G. Schurman, LL.D., President.

The horizontal division of the page at once facilitates reference to the ordinary vocabulary and it is quite as easy to find the obsolete, unusual words when grouped together as they are here.

PRINCETON UNIVERSITY,
Geo. M. Harper, Ph.D., Holmes Professor of Belles Lettres and English Language and Literature.

The editors, I think, have coped very successfully with the rising tide of new words.

ERNEST THOMPSON SETON,
WYNDYGOUL, COS COB, CONN.

The scope and authority of the New International are such that no student or business man can afford to be without it, while its exterior as a book will make it an ornament of the choicest libraries de luxe.

HAMILTON W. MABIE, A.M., LL.D.,
Associate Editor, The Outlook.

I am much impressed by the complete and scholarly way in which it covers the whole field.

OHIO UNIVERSITY,
Alston Ellis, Ph.D., LL.D., President.

The New International shows that the publishers have spared neither pains nor money in bringing it up to date and making it a work not only of special value to the scholar but to the general reader.

YALE UNIVERSITY,
Charles C. Torrey, Ph.D., D.D., Professor of the Semitic Languages.

I can only express the strongest admiration for the range, accuracy, and conciseness of the etymologies and definitions in this Dictionary, in the field where my chief interest lies.

E. P. Morris, Litt.D., Professor of the Latin Language and Literature.

Then I looked for the terms of grammar, which is also a hobby of mine. I happened first upon *parataxis*, about the definition of which I have been obliged to differ with some of my philological friends, and lo! there was my own definition! You will understand that I am now ready to vouch for your accuracy from cover to cover.

UNIVERSITY OF MICHIGAN,
James B Angell, LL.D., President.

At first I was doubtful about the wisdom of making the divided page. But after testing, I find my doubt removed.

Alfred H. Lloyd, Ph.D., Professor of Philosophy.

For general reference I cannot imagine a more serviceable book.

The New International
is commended by men of recognized authority in matters of education, literature, and science all over the world

---

UNIVERSITY OF CHICAGO,
W. D. MacClintock, A.M., Professor of English Literature.

I am all praise for the New Webster. It seems to me the work of the very best scholarship and practical lexicon-making of our time.

CATHOLIC UNIVERSITY OF AMERICA,
Rt. Rev. Thomas J. Shahan, S.T.D., Rector.

Webster's New International Dictionary stands in the front rank of modern lexicographical works.

VASSAR COLLEGE,
Jas. M. Taylor, D.D., LL.D., President.

The New International is a remarkable piece of bookmaking. One is filled with surprise as one thinks of the amount of learning condensed in this single volume.

AUSTIN FLINT, M.D., LL.D.,
NEW YORK, N. Y.

I have used the old "Webster" and its successive editions, including the New International for nearly a half century in preference to all other dictionaries, for the reason that it seldom disappoints me.

UNIVERSITY OF ILLINOIS,
B. H. Bode, Ph.D., Professor of Philosophy.

It is an excellent piece of work, in arrangement as well as in contents. The division of the page seems to me a very commendable feature.

LELAND STANFORD JR. UNIV.,
David Starr Jordan, LL.D., President

I am very much pleased with the thoroughness of the revision, and the compactness and accuracy of the definitions. The device of placing technical and unusual words at the foot of the page is a very useful feature. It is a wonder that publishers of lexicons have not used it before.

ARMOUR INSTITUTE OF TECHNOLOGY,
F. W. Gunsaulus, D.D., President.

The New International Dictionary is a marvelous and apparently complete monument of skill, scholarship, and the genius of practical service.

UNIVERSITY OF IOWA,
Elbert W. Rockwood, Ph.D., Professor of Chemistry.

I have been particularly interested in the treatment of chemical terms and astonished at the number contained in the book as well as at the inclusion of the most important of the latest ones.

C. F. Ansley, B. A., Professor of English.

To do so much so well in one volume is an unparalleled achievement, the fruit of long and most honorable experience.

UNIVERSITY OF MINNESOTA,
Norman Wilde, Ph.D., Professor of Philosophy and Psychology.

I have taken pains to look up philosophical and psychological terms as I happened to be using information given in regard to them. I am especially pleased with the unusually complete historical treatment of the subjects and with the number and representative character of the definitions quoted.

UNIVERSITY OF WISCONSIN,
J. W. Cunliffe, D.Litt., Professor of English.

It is a marvel of modern dictionary making, and the most useful book of its kind that I know. It is always the first book to which we refer our composition students when they are in difficulty.

WALTER P. BOWERS, M.D.,
President Massachusetts Medical Society, Clinton, Mass.

It is easily the best of the large Dictionaries and a copy should be in the possession of every up-to-date physician.

HON. CORNELIUS FORD,
Public Printer, Washington, D. C.

I have the honor to advise you that Webster's New International Dictionary is the standard authority that is generally followed in spelling, compounding, and dividing words.

For over forty years the Merriam-Webster Dictionaries have been the standard authority in the Government Printing Office.

Hundreds of similar testimonials are on file with the publishers.

Adopted as the **standard** in the postal telegraphic department of the **United Kingdom.**

EMINENT AUTHORITIES WARMLY COMMEND
WEBSTER'S NEW INTERNATIONAL DICTIONARY

HON. HENRY CABOT LODGE,
Senator from Massachusetts.

Even a glance was enough to show me how thoroughly the work had been done and also that the revision had been cared for by scholars of high authority.

HON. WILLIAM E. BORAH,
Senator from Idaho.

It has the advantage of being in one volume—a decided one to the busy man who wants a ready reference—yet is so admirably arranged that it is exceptionally comprehensive in its scope.

HON. CHAMP CLARK.
Speaker of the House of Representatives.

I learned to spell out of Webster's old blue-backed speller, and have used Webster's Dictionary from my youth up.

HON. OSCAR W. UNDERWOOD,
Representative from Alabama.

I regard Webster's New International Dictionary as the most reliable book of reference that can be obtained.

NEW YORK HERALD.

It is not only a guide for the student of language, but it is the handbook of the common man, woman and child, as they read the newspaper, book of travel or novel.

CHICAGO RECORD-HERALD.

The first change that strikes the eye is the novel division of each page into two sections, the upper in the familiar Webster type, the lower in smaller type and narrower columns. This rather daring innovation is a stroke of genius.

PHILADELPHIA PUBLIC LEDGER.

The main vocabulary is not encumbered or confused by a multitude of words or forms not properly part of a living language.

ST. LOUIS GLOBE.

Webster's New International Dictionary fills the reader's mind with wonder, evenly divided between the mind which created the work in its original form and the skill with which it has been brought down to the needs of the present minute.

INDIANAPOLIS STAR.

The book is a monument to the greatness of our language.

JOURNAL OF EDUCATION,
BOSTON, MASS.

Webster's New International Dictionary is the most remarkable single volume ever published. It makes even its predecessor look almost insignificant.

CAMBRIDGE UNIVERSITY,
Sir Robert S. Ball, LL.D., F.R.S.,
Lowndean Prof. of Astronomy and Geometry,
Director of the Cambridge Observatory.

It is modestly called a dictionary, but it is really an encyclopedia and a dictionary combined.

RT. HON. JAMES BRYCE,
British Ambassador, Washington, D. C.

I have been greatly struck by the care with which the new edition has been prepared and by the general accuracy of the information it contains.

UNIVERSITY OF SYDNEY,
SYDNEY, AUSTRALIA.
Professor Andrew Harper, D.D.,
Principal of St. Andrew's College.

I have looked up some very unusual historical, philosophical and theological terms and have found them all, contrary to my expectation, in the dictionary.

The New International
has been tested, approved, and accepted by leaders in the world's thought, action, and culture

ARCHBISHOP OF OTTAWA,
Most Rev. Chas. Hamilton, D.D., D.C.L.

The editors seem to have spared no pains to make it a thoroughly reliable and comprehensive work of reference.

ARCHBISHOP OF SYDNEY,
SYDNEY, AUSTRALIA.
Patrick F. Cardinal Moran.

This estimable work has conferred an inestimable book on the reading public.

MAJ. GEN. LEONARD WOOD,
Chief of Staff, War Department.

I find the New International most satisfactory. It is a truly monumental work and one of the greatest value.

GEORGE DEWEY,
Admiral of the Navy.

It contains such full, comprehensive, and up-to-date matters, and very unique in every respect, as to render it in my opinion a most indispensable book.

JOHN BARRETT,
Director General Pan American Union.

Ideally arranged and thoroughly authoritative for the use of a busy man.

COUNT MOLTKE,
Minister from Denmark.

I realize its unusual comprehensiveness and its thoroughly practical division for search and study.

OXFORD UNIVERSITY,
Rt. Hon. the Lord Curzon, G.C.S.I., G.C.I.E.,
Late Viceroy of India,
Chancellor of Oxford University.

It seems to me to reproduce all the features of uncommon excellence to which I have been accustomed for years—and some new ones in addition.

LORD ARCHBISHOP OF CANTERBURY.

A volume which is at once so lucid in its presentment of facts and apparently so exhaustive in its range.

SIR GILBERT PARKER, D.C.L.

A resource for the mind, and a court of appeal for the uncertain intelligence. I prize this great book with the miser's regard.

EDMUND GOSSE, LL.D.,
Librarian to the House of Lords.

There is no single volume now existing in any language, which is so completely brought up to date, and contains such a wealth of useful facts.

Rev. G. CAMPBELL MORGAN, D.D.,
Pastor Westminster Cong. Chapel, London.

It appears to me that this new edition of Webster's is certainly the best and most exhaustive dictionary I have yet seen in one volume.

SIDNEY LEE, LL.D., D. LITT.,
Editor Dictionary of National Biography.

No more complete and satisfying presentation of our language in all its forms has yet, I think, been achieved in a single volume.

PALL MALL GAZETTE,
LONDON.

And if there is any other circumstance calculated to make the average man touch his hat with respect to the deceased Noah and his literary executors, it is that the printing of the work in its new form involves the use of over thirty-five million pieces of type.

SPECTATOR,
LONDON.

It is encyclopedic in character beyond the wont of dictionaries in ordinary use, and the writer has very seldom, if ever, found it fail to give all that was wanted.

IMPERIAL UNIVERSITY OF TOKYO,
Baron D. Kikuchi.

Webster's New International Dictionary seems to surpass the older editions of Webster's Dictionary and that is perhaps the highest praise that could be bestowed upon any English Dictionary.

Hundreds of similar testimonials are on file with the publishers.

Webster's New International Dictionary contains the **pith** and **essence** of an authoritative library.

Webster's New International Dictionary

AND

REFERENCE HISTORY OF THE WORLD.

What is the origin, history, orthography, pronunciation and meaning of any given word?
What are the facts concerning any important person,—ancient or modern?
What is the orthography, local pronunciation, etc., of countries, cities, towns, mountains, rivers, etc.?
What is the origin, history, meaning, etc., of any noted fictitious person or place?
What are the names of the Presidents of the United States, and when did they hold office?
What is the order in which the States were admitted to the Union?
What Americans have been prominent in public affairs, inventions, science, etc.?
What is the comparative size of the United States and foreign countries?
What is the area, population, capital, annual revenue, etc., of foreign nations?
What are the colonial possessions of Great Britain, Germany, France, etc.?
What is the military and naval strength of Germany?
What is the relation of the United States to Samoa?
What was the Missouri Compromise?
When and where was the first naval battle?
Who was Charlemagne and when did he reign?

These and the thousands of other questions which are constantly arising can be most easily and satisfactorily answered by consulting

THE REFERENCE HISTORY EDITION OF WEBSTER'S NEW INTERNATIONAL DICTIONARY.

WHY

WEBSTER'S NEW INTERNATIONAL CAN RIGHTFULLY BE CALLED THE STANDARD DICTIONARY FOR THE ENGLISH-SPEAKING WORLD.

BECAUSE it is used as the standard by nearly all of the Federal and State Courts, where justice often hangs on the meaning of a word.

BECAUSE it is the standard in the United States Government Printing Office at Washington, and in the Executive Departments generally.

BECAUSE the Schoolbooks of the country are based upon it,—25,000,000 or more annually,—so that the children are educated in accordance with its principles.

BECAUSE in every instance where State purchases have been made for the supply of public schools, Webster has been selected.

BECAUSE it is heartily recommended by Presidents of Universities, Colleges, and Seminaries, and by Superintendents of Schools, almost without number.

BECAUSE it is warmly indorsed and commended by men and women of recognized authority in matters of literature, and science, all over the world.

BECAUSE it is used as the standard by a vast majority of the newspapers. Thousands of statements to this effect are on file with the publishers.

BECAUSE of its adoption by the English Government as the standard in the Postal Telegraph Department of the United Kingdom,—the only department requiring an absolute standard.

BECAUSE it is accepted by the Government as the standard for telegraphic messages throughout the Australian Commonwealth.

BECAUSE its sale in Canada and other English Colonies is largely in excess of the sale of all other dictionaries of similar scope.

BECAUSE of its very wide diffusion on the Continent of Europe, in Turkey, India, Australia, South Africa, China, Japan, etc., etc.

BECAUSE it has wider acceptance and is more generally adopted in actual use as a standard authority than any other lexicon in the world.

WHY

WEBSTER'S NEW INTERNATIONAL DICTIONARY IS THE BEST FOR TEACHERS, SCHOOLS, AND FAMILIES.

BECAUSE it is easy to find the word wanted.
Words are given their correct alphabetical places in the vocabulary, each one beginning a paragraph so as to be readily caught by the eye. They are *not* "run in" in the middle of a paragraph or line, out of the natural alphabetical order.

BECAUSE it is easy to ascertain the pronunciation.
The pronunciation is indicated by the ordinary diacritically marked letters used in the schoolbooks of the country, the sounds of which are taught in the public schools.
The International does *not* use strange and peculiar letters nor indicate the ordinary alphabetical sound of one letter by another quite different letter.

BECAUSE it is easy to trace the growth of a word.
The etymologies are complete and scientific and the different meanings a word has acquired are given in the order of their development.
The etymologies are *not* scrimped nor are the definitions jumbled together in an illogical order.

BECAUSE it is easy to learn what a word means.
The definitions are clear, explicit, and full; terse, yet comprehensive. They are *not* composed of technical scientific terms which must themselves be defined before they can be understood.
Each definition is contained in a separate paragraph making it easy to select the one desired. They are *not* run on one after the other.

BECAUSE the New International is one volume containing the *pith* and *essence* of an authoritative library covering every field of the world's thought, action, and culture. It is a constant source of knowledge and interest to all members of the home, a necessity to every business and professional man, and indispensable to the student.

CAUTION! Webster's New International Dictionary and each of the genuine Webster abridgments can be identified by a circular trade-mark (as shown at the right) on the front cover and by our name on the title-page. They are the latest and best. BEWARE of cheap reprints of the Unabridged of 1847 and of unauthorized and unreliable issues of smaller books, also of larger so-called Webster dictionaries not of the genuine Webster series. We have been publishers of the genuine Webster dictionaries for over 60 years.

G. & C. MERRIAM CO., Publishers, SPRINGFIELD, MASS.
